Reference: Clarification of Soil Samples used to Generate 95% UCLM Concentrations

INTRODUCTION

This technical memo has been prepared in response to information requests from Health Canada (IR#'s HC-024). The information request states:

"Please identify the (soil) samples used in the generation of the 95% UCLM (for soil)"

The statement is requesting clarification on the soil samples that were used to estimate the 95% UCLM soil concentrations. The purpose of this memo is to clarify which soil samples were used in the calculation of the 95% UCLM concentration.

Clarification on the Soil Samples used to Estimate the 95% UCLM

The dataset in Appendix B of the HHERA TDR (Appendix 10.4-A) did not include a portion of the baseline soil data used to calculate the 95% UCLM concentration, as this information was provided elsewhere in the submission. The soil dataset provided in Appendix B of Appendix 10.4-A has been revised to include the data used to calculate the 95% UCLM concentration in soil. This revised soil dataset is included as Attachment A to this memo. A description of the data is provided below.

Consistent with the ProUCL statistics provided in Appendix C of the HHERA TDR, a total of 55 soil samples were included in the calculation of the 95% UCLM soil concentration. There were five duplicate samples associated with the 55 soil samples; however these duplicate samples were averaged prior to calculating the 95% UCLM. Overall, the soil samples can be divided into sets, which are provided in Table 1 and discussed below.

Reference: Clarification of Soil Samples used to Generate 95% UCLM Concentrations

Table 1. Soil Samples Included in the Calculation of the 95% UCLM Soil Concentration

Sample Type	Year (s) Collected	Sample Count (Excluding Duplicates)	Duplicates	Media Collected
Key Site	2011	11	3	Soil, vegetation, mammals
Mine Site	2011	8	0	Soil
Reclamation Soils	2012 and 2014	17	0	Soil
Knights Piesold Samples	2011	7	0	Soil, vegetation
Backyard Gardens, Parks and Schools	2012	12	2	Soil, vegetation (from gardens)
<hr/>				
Total		55	5	

KEY SITE AND MINE SITE SOILS

A total of 19 soil samples and three duplicates were collected in 2011 from around the proposed Project infrastructure and from private agricultural land to the south, east, and northeast of the Project area. These samples were divided into two groups:

- **Key Site Soils:** 11 samples and three duplicates were collected from locations identified as 'key sites'. A 'key site' indicates that in addition to soil, vegetation and mammal samples were collected from each of the 11 locations.
- **Mine Site Soils:** 8 samples and zero duplicates were collected from around the Project tenure area and were identified as 'mine site' soil.

RECLAMATION SOILS

A total of 17 soil samples were collected from within the Project boundary area. Five were collected in 2012 and twelve were collected in 2014.

KNIGHT PIESOLD SAMPLES

A total of seven samples were collected near waterways in the LSA by Knight Piesold in 2011. The samples were co-located with vegetation samples. The purpose of the sampling program was to establish pre-mining baseline vegetation and soils metal content.

BACKYARD GARDENS, PARKS AND SCHOOLS

A total of 12 samples and 2 duplicates were collected from schools, parks and community gardens in the following Human Health Study Areas: Aberdeen, Sahali, West-end/Downtown, Brocklehurst

Reference: Clarification of Soil Samples used to Generate 95% UCLM Concentrations

and North Shore. Due to the layout of the community, each area did not necessarily contain a school sample, a park sample and a garden sample. For example, only one sample was obtained for Brocklehurst and this sample was from a community garden. There were no school samples or park samples for Brocklehurst.

Table 3.3-8 in the HHERA TDR provides a breakdown of the soil samples collected from each Human Health Study areas. This table contained an error; there is no school sample for Sahali. The revised Table 3.3-8 is provided below.

Revised Table 3.3-8:

Residential Area	Number of Soil Samples		
	Community Garden	School	Park
Aberdeen	1	3	1
Sahali	1	-	1
West End/Downtown	1	1	1
North Shore	1	-	-
Brocklehurst	1	-	-

Figure 3.3-1 in Appendix 10.4, which identified the Human Health and Baseline Terrestrial Sampling locations, has been updated to reflect the different sample groups discussed above. That figure is included as Attachment B. Samples identified in the Key as "Soil" include both the Reclamation samples and the Mine Site samples.

The revised soil dataset used to calculate the 95% UCLM concentrations of metals in soil is provided as Attachment A. Sample AJX12-ABD-SS, which was previously included in the dataset provided in Appendix A of the HHERA TDR, was removed from the baseline soil dataset as this data was not associated with a community garden, park or school. This data was not used to estimate the 95% UCLM concentration nor was it used to estimate the baseline concentrations in the Human Health Study areas.

Conclusions

The information in this technical memorandum provides clarification on the soil samples used to calculate the 95% UCLM soil concentrations used in the HHERA. The revised dataset and the revised Figure 3.3-1 that shows the sampling locations are provided in Attachments A and B, respectively.
