1	1 - 1	Personal Information Withheld	Squamish, BC	Howe Sound is a place of rare beauty. People from all over the world come to feast in it's sights, especially on their way to Whistler, voted the best ski mountain in the world 5 years running.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
2	1 - 2	Personal Information Withheld	Squamish, BC	Howe Sound is a place of rare beauty. People from all over the world come to feast in it's sights, especially on their way to Whistler, voted the best ski mountain in the world 5 years running.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
3	1 - 3	Personal Information Withheld	Squamish, BC	Surely gravel can come from elsewhere.	<p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>
4	1 - 4	Personal Information Withheld	Squamish, BC	<p>Long ago the area of Stanley Park became a protected park space inspite of it's potential for development and the city and province is forever grateful now for that wonderful decision.</p> <p>Please look to the future. Make Howe Sound a protected place where millions of people can enjoy and learn from this beautiful place.</p>	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>

5	2 - 1	Personal Information Withheld	Lions Bay, BC	With sports fishing cancelled on the salmon this year, it would be irresponsible to allow this project to move forward. I call on DFO to STOP this destructive project before we loose everything. <a href="http://vancouversun.com/business/local-business/dfo-shutting-down-all-salmon-sports-fishing-on-lower-fraser-to-protect-sockeye">http://vancouversun.com/business/local-business/dfo-shutting-down-all-salmon-sports-fishing-on-lower-fraser-to-protect-sockeye</a>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
6	3 - 1	Personal Information Withheld	Howe Sound, BC	I wonder how it is that Burnco gets years to figure out its strategy and the public only gets a couple of weeks to review all of the information and critique it in a meaningful way? This is a skewed process in favour of the proponents. The only way to fix this is to postpone the EA process and allow the public a fair review.	<p>The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.</p> <p>Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.</p>
7	4 - 1	Personal Information Withheld	Lions Bay, BC	It is difficult to justify the need for this proposed mine. There are already other existing gravel mines in the area that service the Vancouver area.	<p>The Proposed Project will provide sand and gravel that will be used to meet the growing demands of the BC marketplace.</p> <p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>
8	4 - 2	Personal Information Withheld	Lions Bay, BC	Please independently look into whether or not this aggregate is truly needed as the benefit does not validate the destruction of a salmon-bearing estuary.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

9	4 - 3	Personal Information Withheld	Lions Bay, BC	12 jobs is not worth it to disrupt a wildlife area (elk, grizzly, wolves, and plenty of at-risk species).	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
10	4 - 4	Personal Information Withheld	Lions Bay, BC	12 jobs is not worth it to disrupt a wildlife area (elk, grizzly, wolves, and plenty of at-risk species).	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

11	5 - 1	Annie	Sechelt, BC	<p>After experiencing firsthand how municipal, provincial and federal government ignore requests by the public to monitor contravention of the permit by the Lehigh sand and gravel pit mine in Sechelt, the Burnco application is another affront to the sensibilities of those who enjoy BC's landscape. History has shown that once a mine permit is issued, the responsible ministerial department does little to monitor the site.</p>	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors' environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
12	5 - 2	Annie	Sechelt, BC	<p>The area under application by Burnco is pristine wilderness that stands to be permanently marred by the development of an aggregate mine. The presence of industry in such a remote place would threaten both wildlife and tourism, especially those who seek the silence of nature.</p>	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

13	5 - 3	Annie	Sechelt, BC	The area under application by Burnco is pristine wilderness that stands to be permanently marred by the development of an aggregate mine. The presence of industry in such a remote place would threaten both wildlife and tourism, especially those who seek the silence of nature.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
14	5 - 4	Annie	Sechelt, BC	If Lehigh Heidelberg has not set the precedent of a good neighbour to the citizens of Sechelt, is there reason to believe that Burnco would be any different? Any potentially huge taxes paid by Burnco do not justify ignoring the public's interests.	Yes, Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.  Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.  Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.
15	5 - 5	Annie	Sechelt, BC	We want the SCR D to listen more closely this time: those of us who call the Sunshine Coast home don't want more scarred landscapes in the name of "development," more noise and dust pollution, and more destruction of beautiful wilderness, especially by multi-million dollar corporations. Whose country is this really?	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR D noise bylaw was considered as part of the assessment.
16	5 - 6	Annie	Sechelt, BC	We want the SCR D to listen more closely this time: those of us who call the Sunshine Coast home don't want more scarred landscapes in the name of "development," more noise and dust pollution, and more destruction of beautiful wilderness, especially by multi-million dollar corporations. Whose country is this really?	A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.  Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.  Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.  Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.

17	6 - 1	Personal Information Withheld	Abbotsford, BC	As a resident of Whistler from 84'-98' in saddened by the continued loss of wildlife habitat. Soon Wolves will be on the I stiff list if we don't protect them for future generations. Please no gravel pit.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
18	7 - 1	Chris Laundry	Squamish, BC	<p>Dear Minister</p> <p>Yet again I find myself engaging in the EA process in an effort to protect Howe Sound.</p> <p>My reason for writing is economic. We are generating vast investments in property and tourism as a direct result of people's appreciation of the natural beauty of the area.</p>	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
19	7 - 2	Chris Laundry	Squamish, BC	<p>Dear Minister</p> <p>Yet again I find myself engaging in the EA process in an effort to protect Howe Sound.</p> <p>My reason for writing is economic. We are generating vast investments in property and tourism as a direct result of people's appreciation of the natural beauty of the area.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. 25	8 - 3	Clara George	Lions Bay, BC	<p>Howe Sound is one of the most important and beautiful places in Canada.</p> <p>It contains a number of estuaries that are important natural places as they provide goods and services that are economically and ecologically indispensable.</p> <p>At a time when climate change threatens our immediate future; the remarkable recovery of the Howe Sound region is vital for scientific study.</p> <p>Estuaries and wetlands have a huge role to play in carbon sequestration and storage - yet environmental assessments have to yet to value this as industrialization is still on the table.</p> <p>It's up to THIS government to defend our valuable eco-systems to ensure that they, and the rest of our country, remain intact for future generations.</p> <p>It's time that Canada took on a leadership role to fight Climate Change and protect our world.</p> <p>Save Howe Sounds, again.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
26	9 - 1	Shira Moir-Smith	Langley, BC	<p>Please leave this area alone! We need wild spaces to survive as well, psychologically, we need to know they're there, that animals roam freely, and the world is not all about profit and greed and destruction.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
27	10 - 1	Personal Information Withheld	Edmonton, AB	<p>I was unable to read BurnCo's Application for Environmental Assessment because the URL could not be found so I am not able to comment on that directly. I can say however that it is my understanding that this project will mine over one million tons of sand and gravel from an ecologically sensitive area that includes McNab Creek, a Pacific salmon spawning area.</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
28	10 - 2	Personal Information Withheld	Edmonton, AB	<p>It is also an area that has only recently begun to recover from being a critically endangered ecosystem, and only in recent years has marine life such as whales, dolphins, salmon, herring, crabs, and prawns returned to the inlet.</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>

29	10 - 3	Personal Information Withheld	Edmonton, AB	<p>It is also under threat from a number of industrial and developmental projects including not only the Burnco Aggregate Mine, but also the Woodfibre LNG project, an industrial waste treatment plant proposal, a ski resort, and housing developments for an additional 10,000 people. This is amidst a lack of a single comprehensive management plan for Howe Sound. This is a problem and the barrage of project proposals that seem to largely go unchallenged is indicative of a system that does not properly assess the environmental impact of these projects singularly or in conjunction with one another.</p>	<p>Potential cumulative effects of the Proposed Project and other certain and reasonably foreseeable projects and activities have been assessed for all non-negligible residual effects (i.e., for all potential effects of the Proposed Project determined to be significant or not significant following the application of proposed mitigation) in accordance with an assessment methodology that reflects accepted EA practice in BC and Canada. The significance of potential cumulative residual effects was characterized for the following:</p> <ul style="list-style-type: none"> <li>- Marine mammals – behavioural disturbance</li> <li>- Amphibian species at risk – barriers to movement, change in mortality, habitat loss</li> <li>- Roosevelt elk – barriers to movement, change in mortality, habitat loss</li> <li>- Grizzly bear – change in mortality, habitat loss</li> <li>- Environmentally sensitive ecosystems – loss of extent</li> <li>- Ecosystems at risk – loss of extent</li> <li>- Air quality indicators – increase in PM2.5 (24 hr, annual), PM10 (24 hr), TSP (24 hr, annual)</li> <li>- Real estate – change in real estate value</li> <li>- Marine navigation – interference with navigation use and navigability due to Project-related vessel traffic</li> <li>- Harvesting fish and wildlife – change in environmental setting</li> <li>- Recreation and tourism – change in environmental setting</li> <li>- Visual quality – change in visual quality</li> <li>- Heritage resources – changes to heritage resource integrity, context and accessibility</li> <li>- People – Human health (air quality and particulate matter).</li> </ul> <p>All potential cumulative residual effects were determined to be negligible or not significant except net effects to grizzly bear; cumulative residual effects to the threatened Squamish-Lillooet Grizzly Bear Population Unit were determined to be significant due in large part to vehicle collisions that might result from the development of new logging roads. Grizzly bear have not been observed within the Proposed Project area and the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

30	10 - 4	Personal Information Withheld	Edmonton, AB	There is also the question of what right private companies have to exploit a wilderness area for profit. The promise of jobs does not outweigh the almost certain destruction of many aspects of this still recovering ecosystem.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
31	10 - 5	Personal Information Withheld	Edmonton, AB	There is also the question of what right private companies have to exploit a wilderness area for profit. The promise of jobs does not outweigh the almost certain destruction of many aspects of this still recovering ecosystem.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

32	10 - 6	Personal Information Withheld	Edmonton, AB	There is also the question of what right private companies have to exploit a wilderness area for profit. The promise of jobs does not outweigh the almost certain destruction of many aspects of this still recovering ecosystem.	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>
33	10 - 7	Personal Information Withheld	Edmonton, AB	We are talking about building a gravel pit on a landscape endowed with some of the most stunning natural scenery in the world, albeit one that still carries scars from an industrially exploitative past.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
34	10 - 8	Personal Information Withheld	Edmonton, AB	Creating a provincial recreation area in lieu of industrial development would not only preserve the land, it would draw visitors from around the globe as well as provide a place for people in nearby Metro Vancouver to visit and experience nature. This surely would create jobs and a thriving local economy.	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>

35	10 - 9	Personal Information Withheld	Edmonton, AB	<p>Yet there is no profit in that suggestion and that alone should be reason enough to disagree with this proposal. Is there any mention in the environmental assessment of the fact that Burnco donates money to the B.C. Liberals?</p> <p>The last of British Columbia's natural habitats are under siege. With controversies surrounding such topics as the grizzly bear trophy hunt and the government running down packs of wolves to shoot them from helicopters, there is truly a need for more oversight into projects that threaten some of the last remaining ecosystems that have managed to breathe amidst aggressive, for-profit development.</p> <p>Should a private company be able to go into somewhere like Howe Sound and turn it into a gravel pit? Who truly benefits from this? I think we all know the answer to that.</p> <p>You might use the argument that I live in Alberta and so this doesn't affect me. Well, Burnco originates in Alberta so why should I have less say about this than they do?</p> <p>As someone who visits B.C. regularly I can see clearly that its most precious resources lie in its amazing landscapes and abundant wildlife. We don't need to wait until it's too late to protect the things that are worth far more than money, and that will undoubtedly define our legacy for future generations.</p>	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
36	11 - 1	Personal Information Withheld	Abbotsford, BC	<p>Concern for the wildlife and environment. Especially the wolf population.</p>	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Wolves were not specifically identified as candidate or selected valued component for the purpose of the EA. Potential effects on Grizzly Bear are a reasonable surrogate representing mobile and wide ranging mammals such as wolverine, black bear and wolf.</p>
37	12 - 1	Ingrid Wray	Lions Bay, BC	<p>I am opposed to this project for many reasons including the following:</p> <p>Foremost, is the proposed reintroduction of industry into Howe Sound on an random basis with no overall management plan for this precious corridor of BC.</p>	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>

38	12 - 2	Ingrid Wray	Lions Bay, BC	There has been a slow recovery of the Sound from years of unchecked pollution from Woodfibre, Port Mellon and Britannia mines which resulted in closing the prawn and crab fishing for many years. Herring disappeared and salmon stopped returning to the streams. Hundreds of millions of tax payers dollars later and finally enforcement of laws regulating the companies, the area is now showing signs of recovery.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
39	12 - 3	Ingrid Wray	Lions Bay, BC	If sea life are once again to be under threat, and we are talking of a gravel mine in an estuary who knows if they can ever recover. The Cohen report on the state of the wild salmon stocks and the decline of returning salmon in the Fraser river is a red flag that all our salmon needs to be protected.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.

40	12 - 4	Ingrid Wray	Lions Bay, BC	I think there should be a moratorium on any new industries until the cumulative effects can be ascertained. Have we learned nothing from the past mistakes ? Even with mitigation strategies in place the enforcement often comes too little too late , Mount Polley comes to mind.	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors’ environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
41	12 - 5	Ingrid Wray	Lions Bay, BC	Howe Sound and a river estuary is the wrong place for a gravel mine and the risk of adversely affecting the wildlife habitat too great.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

42	13 - 1	Personal Information Withheld	Lions Bay, BC	absolutely oppose this in such a gorgeous part of the world. Find another location that will not adversely affect the way of life for people and ocean life	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
43	14 - 1	Personal Information Withheld	Howe Sound, BC	Pictures/photos on the Burnco website and on their advertising are deceiving the public. Please check that all the pictures used in their promotions are accurate depictions of what destruction can be expected from this mine - not just the "happy, glossy images" they use to sell this project. They have green-washed everything, including the language they use to describe their project. This sort of manipulation is inappropriate to convince the public to destroy an estuary (by the way, why don't they use this word?).	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
44	14 - 2	Personal Information Withheld	Howe Sound, BC	They state that "The Project has been designed based on areas that have been previously cleared, and on detailed groundwater, fisheries and surface water modelling." This is again misleading, as the estuary has a couple of decades to resume its natural state. As well, we drove by in our boat a few years ago and took pictures of them digging up the foreshore - they blamed the loggers but it was to access their property. They are ruthless and don't seem concerned about the public's disinterest in seeing this project move ahead (see all the previous outpouring of negative public comments).	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
45	15 - 1	Personal Information Withheld	Howe Sound, BC	Once the buyers of gravel in Vancouver understand that the purchase of Burnco gravel is a contribution to the devastation of McNab Creek estuary, they will not buy it. Burnco will be boycotted. And all of this will be a big waste.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

46	16 - 1	Personal Information Withheld	Lions Bay, BC	Burnco's proposal does not adequately address the concerns raised about elk, grizzly bear, wolves, and other endangered species that will be adversely affected by this mine. They are saying the negative impact is "not significant". That is ridiculous, as anyone with a basic understanding of wildlife will know that the impact will be hugely significant. More independent studies need to be conducted. Also, just adding another waterway is not the same as the one that is intact and has been for several years.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
47	16 - 2	Personal Information Withheld	Lions Bay, BC	You can't snap your fingers and create an old-growth forest, can you? The same applies to the estuary that functions in it's own way.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
56	21 - 4	Dave Gauley	Squamish, BC	I oppose the mine project as short sighted when weighed against the impacts it will have on the sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
57	22 - 1	David Crowther	Squamish, BC	I am against this gravel pit operation because it will damage Howe Sound's water quality with silt and suspended fine particles in the water.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

58	23 - 1	Dr. Hugh Freeman	Bowen Island, BC	A gravel mine? I thought we were done with this nonsense. A pod of killer whales just passed, perhaps 20-25. Looking for salmon and anchovies.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
59	23 - 2	Dr. Hugh Freeman	Bowen Island, BC	A gravel mine will prove to be destructive to the Howe Sound environment.	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>
60	23 - 3	Dr. Hugh Freeman	Bowen Island, BC	Short comment registering my opposition.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
61	24 - 1	Richard Zimmer	Garibaldi Highlands, BC	I recently purchased property on Gambier Island to show my family the beauty of the ocean and mountains. We look directly at the proposed burnco gravel pit.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

62	24 - 2	Richard Zimmer	Garibaldi Highlands, BC	Howe sound has just recently recovered from years of pollution.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
63	24 - 3	Richard Zimmer	Garibaldi Highlands, BC	I can't believe that the BC government would risk this beautiful area for a few dollars of tax revenue. I would rather you raise my taxes.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
64	24 - 4	Richard Zimmer	Garibaldi Highlands, BC	The mine will disrupt the enjoyment of all owners in the area as well as tourism which I see constantly on the sound. Please deny their application.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
65	25 - 1	Personal Information Withheld	Howe Sound, BC	Has advertising Canada reviewed the claims made by Burnco? Truth matters.	Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

70	28 - 2	Denise Olson	Gibsons, BC	It will set the entire Howe sound region (impacted by silt, ship traffic etc) decades back in beginning to be a healthy ecosystem.. We are just now seeing recovery from decades of environmental abuse by industry which left years ago.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
71	28 - 3	Denise Olson	Gibsons, BC	With salmon runs decreasing all over the province , it is incumbent Apon us all to recognize and acknowledge that this area is essential to preservation and cannot be compromised by this for profit business .	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
72	29 - 1	David Okell	Bowen Island, BC	Howe Sound is more valuable as a recreational area, and home to an increasing population on the sea to sky corridor.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
73	29 - 2	David Okell	Bowen Island, BC	This proposed development will degrade the environment	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>

74	29 - 3	David Okell	Bowen Island, BC	This proposed development will be visible from the famed seatosky hwy	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
75	29 - 4	David Okell	Bowen Island, BC	This proposed development will devalue properties on Gambier and on the sea to sky corridor .	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
76	29 - 5	David Okell	Bowen Island, BC	Gravel is obtainable elsewhere, to destroy this pristine environment is nothing less than the continuing rape of our environment by greedy corporations who are only concerned with profit to the detriment of Howe Sound. Shame on you for even considering this proposal	<p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>
77	30 - 1	Tracey Dudley	North Vancouver, BC	this is my disapproval for the Mcnab Creek gravel mine!	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

88	34 - 3	Personal Information Withheld	Williamsons Landing, BC	We owe it to nature and Canada. How can you possibly ruin it again - perhaps forever?!!	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
89	35 - 1	Personal Information Withheld	Keats Island, BC	I am writing as a resident of Keats Island in Howe Sound, in close proximity to the proposed project area. This is an environmentally healthy area with biodiversity and marine life specific to the area that would be damaged by the Bunco site. The wildlife in this particular area would be subject to so much change that would in turn, impact the entire chain from micro to macro, meaning from the smallest organisms such as algae through the entire chain and up to the largest predators, whales that use this ecosystem.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
90	35 - 2	Personal Information Withheld	Keats Island, BC	In addition, there is so much beauty and enjoyment to be had in this area by kayakers, swimmers and nature lovers that the increase in boat traffic and commercial transport for this facility would drastically reduce the quality of life in Howe Sound. I don't believe that the stakeholders in this region are in favour of such a project in this location.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>

94	37 - 1	Richard G. Rawlins	Bowen Island, BC	I would like to go on record as being opposed to further expansion of the Burnco gravel mine in Squamish.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
95	37 - 2	Richard G. Rawlins	Bowen Island, BC	There is little evidence that the encroachment into Howe Sound will have any community benefit other than a few jobs. The revenue stream will not aid the community either.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
96	37 - 3	Richard G. Rawlins	Bowen Island, BC	On the contrary, the proposed expansion will only further denigrate the pristine Howe Sound and Squamish area, which would be much more profitable to develop for tourism which would benefit everyone in the area and generate funds to protect and maintain this exception land.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>

97	37 - 4	Richard G. Rawlins	Bowen Island, BC	Squamish history as an industrial site for paper, mining, and proposed LNG tank farm, and now huge gravel pit, should be left in the past and the community should move forward into utilization and management of sustainable resources that reinforce what is so special about Sea to Sky.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
98	38 - 1	Personal Information Withheld	Lions Bay, BC	Why would anyone want to wreck the most scenic and beautiful place on Earth? You pay paradise when you put up a parking lot. You don't know what you've got til it's gone.... Burno, make it an ecological park and you will make money in spades and become the admiration of the world!	A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.  The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.  Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.
99	39 - 1	Judy Osburn	Pasley Island, BC	Howe Sound is a national treasure and should be protected from industry.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
100	39 - 2	Judy Osburn	Pasley Island, BC	I have lived in the Collingwood Channel area for over 60 years and have experienced the amazing change over the past 5 years with the return of sea life due to the closure of Britannia Mines and Port Mellon Paper. As we move forward the value of pristine waters will be of far more economic value than polluted dead waters.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.

102	40 - 1	Personal Information Withheld	Lions Bay, BC	An environmentally destructive gravel pit that provides only around 12 jobs in one of the most spectacular fiords in the world on the doorstep of a world class city ? No! No! No!	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
103	41 - 1	Personal Information Withheld	Vancouver, BC	Do not go ahead with this project. There is no plan for Howe Sound. Each proposed project is looked at in terms of taxes to BC and not in terms of liveable region, ANY consideration of the environment and wildlife, or any better options.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
104	41 - 2	Personal Information Withheld	Vancouver, BC	There's also no explanation of why we need this. I understand aggregate is used for building AND how can we get this without messing with our fish, our waters, creating boat traffic where none was, ruining the environmental recovery that has started to happen. What problem are "We" trying to solve by allowing the Burnco project to go ahead? The short sighted approach with lack of cohesive and integrated thought or planning is unacceptable.	The Proposed Project will provide sand and gravel that will be used to meet the growing demands of the BC marketplace.  Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.
105	42 - 1	Eileen Mackenzie	Bowyer Island, BC	this is too much destruction for too few jobs and shows a reckless lack of concern for our environment	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
106	43 - 1	Brigitta Shore	Lions Bay, BC	This is such a terrible project, I can't believe you can consider it. McNab is one of three estuaries in Howe Sound, it births life and there is no one who believes that having an aggregate mine will not destroy this. We have already seen industrial destruction in Howe Sound, it took years and millions of tax dollars and volunteer groups to clean up and rebuild the health of the ocean.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.

107	43 - 2	Brigitta Shore	Lions Bay, BC	Tourism is flourishing in Howe Sound, it's on the Sea to Sky Corridor, the aorta to whistler, people come by boat, car, plane and ferry to swim, paddle, hike, camp and enjoy cabin and boating life in natural splendour with beautiful wild life in the ocean and on land.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
108	43 - 3	Brigitta Shore	Lions Bay, BC	It's as valuable if not more so than Stanley Park, have the foresight and respect to protect this area from industry. BC residents will loose in the short term by not being able to enjoy the area or the ocean life that will be destroyed, our tourism will be hit, and in the long term the cleanup and destruction will again cost us more than you make in tax revenue and 12 local jobs. Don't do it please, the down side far outweighs the upside! Attached is a picture of a bear at McNab dining on mussels for breakfast, 100 ft from our boat.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
109	44 - 1	Elise Roberts	North Vancouver, BC	Howe Sound is a water that is in recovery with herring finally returning after a decade of absence.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
110	44 - 2	Elise Roberts	North Vancouver, BC	I do not support any industrial activity in this area, especially in a watershed zone. And for only 12 jobs it is not worth it. Please do not put private profit over the wishes of the many citizens and tourists who love these areas, one of the most spectacular area and naturally rich ecosystems in Canada.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. 119	49 - 1	Lisa Falconer	Vancouver, BC	Over the past 3 years we have personally seen the growing improvement and return of marine life in Howe Sound. We have enjoyed many dolphin sightings, and have seen Orcas cruising past McNabb Creek during the last 3 summers. As recreational boaters in Howe Sound, we harvest prawns and crabs just off the point of the proposed Burnco gravel operation.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
120	49 - 2	Lisa Falconer	Vancouver, BC	Careful stewardship of this remarkable area has kept prawn, crab and fish stocks healthy in Howe Sound--restriction of industry and one can assume, the health of the water has brought back whales and dolphins. Slowly but surely--it has been improved. And now we are proposing to throw all that away?  I feel that we have been given a second chance to preserve the health and beauty of Howe Sound. I think it would be criminal to endanger it with increased industrial facilities such as the Burnco project.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
121	49 - 3	Lisa Falconer	Vancouver, BC	The noise will impinge on the ability of recreational visitors to enjoy being in proximity to the operation. Barges and hi-speed water taxi traffic will scare away the orcas and dolphins. In addition, the wake produced by these vessels damage established docks across from McNabb and erode shoreline.  The area near McNabb creek is also one of the last safe anchorages for boaters in Howe Sound, and the Burnco operation will block access to the land.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
122	49 - 4	Lisa Falconer	Vancouver, BC	Allowing this kind of destructive and disruption operation does not respect the investments made by various stakeholder groups in the Howe Sound area--effectively destroying the value of their landholdings and recreational organizations. An example of that is the Thunderbird Yacht Club which purchased their land--directly across from McNabb Creek and the Burrard Yacht Club as well. These two groups bought their land many years ago and have been conscientious occupants, respectful of the land and marine resources they enjoy. Is there no protection for quiet enjoyment of property? We are members of TBYC and I can tell you that we agonize about cutting down a single tree. The Burnco proposal makes our care to preserve the natural beauty of our area seem like a joke.	Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.  The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.  Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).  BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.

124	50 - 1	Robert Thompson	North Vancouver, BC	I'm not against pipelines, LNG, logging or most recourse extraction that creates wealth for our province. I'm not even against gravel extraction. This one, however, is proposed for what is the only pristine valley along steep Howe Sound. This is an area of recreational escape from the big city. This is not the right place for the destruction, dust, noise and lights produced extracting gravel. Surely there are more suitable locations farther away from vacation homes, water skiing, boating, hunting, fishing and the such. We have an entire province to extract resources. Doing it in the city's playground simply does not serve today's or future citizens very well.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. 125	51 - 1	Personal Information Withheld	North Vancouver, BC	<p>A large scale gravel mine continues to press forward at McNab Creek, smack in the middle of the Sound.</p> <p>This is the worst idea ever. Why would this be approved despite the risks and low job creation. Not worthy of the destruction of the land and risk to estuaries. Please consider the harm to the environment and do not allow this application to proceed.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
126	52 - 1	Personal Information Withheld	Lions Bay, BC	<p>More studies and consideration needs to be done of the cumulative effects of all the industries - the run of river project alone is overload for this area.</p>	<p>Potential cumulative effects of the Proposed Project and other certain and reasonably foreseeable projects and activities have been assessed for all non-negligible residual effects (i.e., for all potential effects of the Proposed Project determined to be significant or not significant following the application of proposed mitigation) in accordance with an assessment methodology that reflects accepted EA practice in BC and Canada. The significance of potential cumulative residual effects was characterized for the following:</p> <ul style="list-style-type: none"> <li>- Marine mammals – behavioural disturbance</li> <li>- Amphibian species at risk – barriers to movement, change in mortality, habitat loss</li> <li>- Roosevelt elk – barriers to movement, change in mortality, habitat loss</li> <li>- Grizzly bear – change in mortality, habitat loss</li> <li>- Environmentally sensitive ecosystems – loss of extent</li> <li>- Ecosystems at risk – loss of extent</li> <li>- Air quality indicators – increase in PM2.5 (24 hr, annual), PM10 (24 hr), TSP (24 hr, annual)</li> <li>- Real estate – change in real estate value</li> <li>- Marine navigation – interference with navigation use and navigability due to Project-related vessel traffic</li> <li>- Harvesting fish and wildlife – change in environmental setting</li> <li>- Recreation and tourism – change in environmental setting</li> <li>- Visual quality – change in visual quality</li> <li>- Heritage resources – changes to heritage resource integrity, context and accessibility</li> <li>- People – Human health (air quality and particulate matter).</li> </ul> <p>All potential cumulative residual effects were determined to be negligible or not significant except net effects to grizzly bear; cumulative residual effects to the threatened Squamish-Lillooet Grizzly Bear Population Unit were determined to be significant due in large part to vehicle collisions that might result from the development of new logging roads. Grizzly bear have not been observed within the Proposed Project area and the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
127	53 - 1	Jack Johnston	Kelowna, BC	<p>The approval process for this type of project takes ridiculously long. Imagine trying to build the Trans Canada Highway or the transcontinental railroad now. Impossible, it would never get done!</p>	<p>The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.</p> <p>Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.</p>

130	56 - 1	Personal Information Withheld	Howe Sound, BC	Fine particles from gravel extraction cause cancer. Wind in the sound is constant and will be blown all over the place. For the health of everyone, please do not allow this mine to move forward. There has been much research done that tells us that dust from gravel operations can cause health problems. People that have existing lung conditions or other health problems can be impacted largely by dust but overall long-term exposure for anyone is not good.	A detailed assessment of potential public health effects of the Proposed Project is presented in Volume 2, Part B – Section 9.1 of the EAC Application/EIS.  Potential effects of the Proposed Project on human health assessed considered activities contributing to air emissions, deposition of particulate matter to terrestrial environments, and emission of substances to aquatic environments.  Following the application of proposed mitigation, all potential health effects were determined to be negligible or not significant.
131	56 - 2	Personal Information Withheld	Howe Sound, BC	And Burnco will operate every day for 16+ years.	The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCRD noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.  Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.
132	56 - 3	Personal Information Withheld	Howe Sound, BC	There effects will be great from having a permanent operation in the vicinity. Dust is made up of tiny, solid particles (particulate matter) floating in the air. Dust that is generated and released into the air as a direct result of human activity is known as “fugitive” particulate emissions, meaning that it has escaped from its place of origin. Dust blowing from gravel pits, mines or construction sites are all indications that a fugitive dust issue may exist.	A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.  Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.  Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.  Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.

133	56 - 4	Personal Information Withheld	Howe Sound, BC	<p>People should be concerned about this dust because of the problems it can create including death.</p> <p>Exposure to particles can lead to a variety of serious health effects. Coarse particles (such as those found stirred up in the wind blown dust) and fine particles (such as those found in haze) pose the greatest problems because they can get deep into the lungs. Scientific studies have linked particle pollution exposure to a variety of health problems including: decreased lung function, development of chronic bronchitis, increased respiratory symptoms, heartbeat irregularities and heart attacks, just to name a few.</p> <p>Residents living in the vicinity of a gravel pit or similar operation are at greatest risk for this type of exposure, not to mention all other living creatures that have had absolutely no say in the acts of civilization. In medical literature, the term for this type of disease is called silicosis and it needs to be dealt with on an individual constitutional level. The main thing to consider is the health of everyone and everything in the sound.</p>	<p>A detailed assessment of potential public health effects of the Proposed Project is presented in Volume 2, Part B – Section 9.1 of the EAC Application/EIS.</p> <p>Potential effects of the Proposed Project on human health assessed considered activities contributing to air emissions, deposition of particulate matter to terrestrial environments, and emission of substances to aquatic environments.</p> <p>Following the application of proposed mitigation, all potential health effects were determined to be negligible or not significant.</p>

134	57 - 1	Personal Information Withheld	Howe Sound, BC	<p>The killer is the fine particles of dust you cannot see. The mining and crushing of gravel creates and releases fine particulate matter called Crystalline Silica into the air which will be carried by the wind towards homes and schools.</p> <p>These dangerous particles will cover the ocean, permeate homes, neighborhood parks, schools, and playgrounds.</p> <p>Adults and vulnerable children and seniors will be exposed to this harmful carcinogen every day, all day.</p> <p>Why the EA would CHOOSE to allow the creation of a toxic environment for our neighborhoods and these neighborhood schools when they do, in fact, have authority?</p> <p>The EA needs to use their authority to deny the permit in order to protect public health, safety, economic development, and quality of life is inexcusable, incomprehensible, and UNACCEPTABLE.</p> <p>So what's wrong with Crystalline Silica?</p> <p>Crystalline Silica, a known carcinogen (cancer causing agent) which has been found to cause lung cancer, silicosis, and other health hazards!</p> <p>SOME FACTS:</p> <p>Some of the Crystalline Silica can be of the most dangerous variety with a designation as a PM2.5 particle. Those are particles that measure less than 2.5 micro meters in size. Once these tiny particles enter the lung they stay there. The body's natural defense encapsulates them causing permanent lung damage or cancer.</p> <p>Winds can carry these fine particles over great distances.</p> <p>The closer you are to the source, the higher the concentration and danger. Health effects can range from Silicosis, lung cancer,</p>	<p>BURNCO's HSE Management Plan includes a Silica Exposure Code of Practice (SECOP) to identify the potential sources of crystalline silica exposure and to establish suitable control measures to protect workers, contractors and the general public from any related harmful effects on human health. The SECOP outlines controls which will be implemented on-site to control dust generation. The control and suppression of dust are the principal ways in which worker exposure to crystalline silica will be mitigated. Similarly, dust control activities will also be carried out to prevent human health impacts in the environment beyond the boundaries of the operation.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. The SECOP will be incorporated into the Air Quality and Dust Control Management Plan. Mitigation measures outlined in this Plan will assist in controlling particulate and potential silicate emissions from the Proposed Project (please refer to Section 5.7.5.3 and Table 5.7-11 of the EAC Application/EIS for mitigation measures incorporated in the Air Quality Assessment).</p> <p>Baseline air monitoring will be carried out prior to operation to establish dust and crystalline silica levels. Ongoing monitoring of dust levels and periodic x-ray diffraction analysis of dust samples for silica content will be conducted to confirm the effectiveness of the dust control program and the concentration of silica in dust generated at the site. Modifications will be made to the dust control program, as appropriate, to continuously improve dust suppression and reduce silica exposure levels to as low as reasonably practicable and below the allowable limit (8-hour time weighted average) of 0.025 mg/m3 for crystalline silica as set out in the WorkSafeBC Table of Exposure Limits for Chemical and Biological Substances.</p>
135	58 - 1	Personal Information Withheld	Squamish, BC	<p>I 100% support this industry on our water. We need the gravel if we continue to want to add development in our communities. Perfectly suited location. Please do not let the "privileged individuals of Bowen and Bower Islands" to speak for us who support industry and jobs. One of the "summer" islanders actually posted that Industry and marine traffic would "spoil their views from their deck." There will be high paying jobs and years of employment. Thank you.</p>	<p>Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
136	59 - 1	Personal Information Withheld	Coquitlam, BC	<p>As a Burrard Yacht Club member, the club is speaking for the membership without permission. I support this project as does my husband.</p>	<p>Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

137	60 - 1	Brent O'Malley	Bowen Island, BC	Howe Sound is just now recovering from decades of industrial abuse through most of the 20th century. Allowing a gravel mining operation will turn back a decade of rebirth that the Sound has been enjoying!	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
138	60 - 2	Brent O'Malley	Bowen Island, BC	Tourism brings more money into the local economy than this project ever will. This project must be stopped.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
139	61 - 1	Mike Collier	Not Stated	I am opposed to this development in such a sensitive environment.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
140	61 - 2	Mike Collier	Not Stated	I cannot see how the fish and wildlife will not be utterly destroyed for generations.	Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.  The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.  A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.
141	62 - 1	Dave Matthews	Not Stated	I have reviewed the materials available on the web regarding this project. I do not support this project.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
142	62 - 2	Dave Matthews	Not Stated	Beyond the numerous negative impacts on the local flora and fauna as outlined in the environmental assessment, placing a gravel pit in the middle of the beauty of Howe sound seems irresponsible and short sighted.	Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.  The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.  A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.
143	62 - 3	Dave Matthews	Not Stated	This entire area is an easily accessible recreational mecca for both local and tourists.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.

151	65 - 1	Robert (Robb) and Bonny Schultz	Bowen Island, BC	<p>Howe Sound is again becoming rich with returning sea life species such as Anchovy, Herring, Chinook Salmon, Bottom fish, Porpoises, Orca, Humpback Whales and Seals.</p> <p>Also bird life including bald eagles, hawks, sea gulls, geese and ducks are feeding on this balance. BC Spotted Prawns and Dungeness Crab are also here now but for how long, will it last if this project proceeds? Stop Howe Sound Re-Industrialization immediately.</p> <p>Wonderful to witness this regeneration over the past 45 years that we have lived here, as full time residents. Howe Sound polluters like Britannia Beach Copper Mine, Woodfibre Pulp Mill, FMC Chemical Plant for Pulp Mills are examples of the industrialization that gradually wiped-out the fish/sea life habitats in this region. Over the past nearly 50 years these waters have slowly been detoxified and cleaned-up. These polluting industries have shut down and there is still a long way to go. We must protect and save our Sound, not mess it up again.</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
152	65 - 2	Robert (Robb) and Bonny Schultz	Bowen Island, BC	<p>Do not allow them to re-industrialize Howe Sound! It has much stronger tourism values for the BC and international markets with Whistler Blackcomb being North America's #1 Ski destination and the obvious success of the new Squamish Gondola Project. Tourism is in our short and long term future while Burnco Aggregate Mining operating here is totally unacceptable to me.</p> <p>Just look at it and you'll see. Where is the Sun Derby winning run of huge Tye Salmon that were caught year after year at McNabb Creek in the past? There is no place here for this Aggregate proposal, anywhere near McNabb Creek.</p> <p>Burnco Aggregate Project must not be considered for Howe Sound. What will it do to improve our marine species and Tourism described above? What is its environmental benefit to Howe Sound? What limits, if any, have been placed on the size of this aggregate mining and marine transportation project?</p> <p>Count us permanently opposed to this gravel and sand exploitation project in Howe Sound.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>

156	67 - 3	Personal Information Withheld	Sunshine Coast, BC	As for the environmental assessment, I would hope that all the BC gravel pit problems & history will also be seriously examined. Existing legislation has not been changed for years, consequently there is very little accountability for environmental damage.	The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.  Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.
157	68 - 1	Gord Broughton	Mill Bay, BC	To destroy the mouth of McNab Creek would be a very foolish thing to do. The fish and wildlife would be gone. An entire ecosystem destroyed.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
158	69 - 1	Brianna	Vancouver Island, BC	I do not agree with this project as I wish to protect the beautiful environment which means a lot to me and many other people. There is no need to destroy a perfect natural area which is priceless and means more than anything ever could.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
159	70 - 1	Dr. Hugh Freeman	Bowen Island, BC	Howe Sound and environs should be developed into a marine preservation sanctuary.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.

160	70 - 2	Dr. Hugh Freeman	Bowen Island, BC	The feed stocks have improved and now the killer whales by the dozens are back.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
161	70 - 3	Dr. Hugh Freeman	Bowen Island, BC	What a venue for the tourist industry! What an opportunity for scientific research!	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
162	70 - 4	Dr. Hugh Freeman	Bowen Island, BC	Gravel pits are not what we should support in Howe Sound. Go somewhere else please.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
163	71 - 1	Christina Halldorson	Howe Sound, BC	<p>I came to Howe Sound in 1985. The most beautiful place I'd ever seen. I still live in Howe Sound today and spend a great deal of time boating there. My vision for Howe sound has always been residential development and to eliminate industrial development. Eco- tourism and sharing this wonderful spot with the world has always been my vision for this area. A great deal of funds has been spent on developing a new sea to sky highway which has made the area much safer to access. Wildlife has returned after much funds was spent on the Britannia Mine clean up. Why on gods green earth would anyone with any conscience would so to speak " pave paradise and put up a parking lot " you don't know what you've got till it's gone!</p> <p>The residential population of Howe Sound are the protectors and keepers of the Sound.</p> <p>Governmental authorities should listen to the residents. Burnco can easily get gravel elsewhere. The crushing of gravel in this area is unthinkable.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. 166	72 - 1	Personal Information Withheld	Ekins Point, BC	I am strongly opposed to the proposed McNab Creek gravel mine. I am a resident of North Vancouver and have been a member of Burrard Yacht Club for more than 10 years and have been enjoying our Ekins Point outstation for that time. This area of Howe Sound has high recreational value and is a wonderful escape from Vancouver within a few hours boat travel. The area is already the subject of industrial development to its detriment. The addition of the noise and visual impact of a gravel mine would degrade the recreational value of the area.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
167	72 - 2	Personal Information Withheld	Ekins Point, BC	I am strongly opposed to the proposed McNab Creek gravel mine. I am a resident of North Vancouver and have been a member of Burrard Yacht Club for more than 10 years and have been enjoying our Ekins Point outstation for that time. This area of Howe Sound has high recreational value and is a wonderful escape from Vancouver within a few hours boat travel. The area is already the subject of industrial development to its detriment. The addition of the noise and visual impact of a gravel mine would degrade the recreational value of the area.	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.
168	72 - 3	Personal Information Withheld	Ekins Point, BC	I am strongly opposed to the proposed McNab Creek gravel mine. I am a resident of North Vancouver and have been a member of Burrard Yacht Club for more than 10 years and have been enjoying our Ekins Point outstation for that time. This area of Howe Sound has high recreational value and is a wonderful escape from Vancouver within a few hours boat travel. The area is already the subject of industrial development to its detriment. The addition of the noise and visual impact of a gravel mine would degrade the recreational value of the area.	A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.  The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.  Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.

171	74 - 2	Sarah Valentine	Pemberton, BC	BURNCO Rock Products of Alberta wants to dig a 74+ acre pit, build an onsite crushing and processing plant, and produce 20+ million tonnes of aggregate over 16 + years. The project will create only 12 direct operational jobs and faces widespread community opposition, despite which the company continues to pursue the development.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
172	75 - 1	Personal Information Withheld	Squamish, BC	Do not want another open pit mine in the area Leave the land alone	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

179	77 - 6	Personal Information Withheld	North Vancouver, BC	As a person who enjoys Howe Sound for its natural beauty and serene quiet, I also disapprove of putting in a large eyesore that creates lots of noise, and frightens and keeps the marine life and wildlife I go to enjoy away.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
180	77 - 7	Personal Information Withheld	North Vancouver, BC	As a person who enjoys Howe Sound for its natural beauty and serene quiet, I also disapprove of putting in a large eyesore that creates lots of noise, and frightens and keeps the marine life and wildlife I go to enjoy away.	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>

184	79 - 2	Personal Information Withheld	Vancouver, BC	This will devastate Howe Sound and all the animals and water life in the area. It would be bad for tourism and have a long terms impact for generations to come, creating an ecological barren area. No to a gravel pit. BC and Howe Sound deserve better.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
185	80 - 1	Robin Spano	Lions Bay, BC	Concerned about salmon populations. The mine is due to disrupt an important estuary where salmon, and I believe also herring, spawn.	A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.  An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.  The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.  The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.
186	80 - 2	Robin Spano	Lions Bay, BC	I also oppose the project as a resident of the area who has seen major rejuvenation of marine wildlife in recent years. Gravel isn't an import or rare enough commodity to risk disturbing this amazing habitat for sea life, including but not limited to orcas, dolphins, and the glass sponge reef.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
187	80 - 3	Robin Spano	Lions Bay, BC	I also oppose the project as a resident of the area who has seen major rejuvenation of marine wildlife in recent years. Gravel isn't an import or rare enough commodity to risk disturbing this amazing habitat for sea life, including but not limited to orcas, dolphins, and the glass sponge reef.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.

188	80 - 4	Robin Spano	Lions Bay, BC	I also oppose the project as a resident of the area who has seen major rejuvenation of marine wildlife in recent years. Gravel isn't an import or rare enough commodity to risk disturbing this amazing habitat for sea life, including but not limited to orcas, dolphins, and the glass sponge reef.	<p>A detailed assessment of potential effects on marine resources, including marine benthic communities, is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>Glass sponges are a group of filter feeding organisms which can form large sponge reefs that provide habitat for other marine invertebrate and fish species. Glass sponges in Howe Sound live at depths as shallow as -20 m (chart datum). BURNCO has included glass sponges in the assessment of potential effects on marine resources.</p> <p>Although no glass sponges were observed during the dive and towed video surveys of the Proposed Project area, foreshore and sub-tidal nearshore conducted for the assessment, their known occurrences throughout Howe Sound have been documented. The marine footprint of the Proposed Project does not overlap with any known or mapped locations of glass sponges or glass sponge reefs occurrences.</p> <p>Potential residual effects of propeller scour and aggregate spills on glass sponges were assessed. Propeller wash velocities at the depths at which glass sponges occur are predicted to be within the same magnitude as tidal currents present at this depth. With the application of proposed mitigation, the likelihood of an aggregate spill adversely affecting glass sponge colonies is low. The significance of potential residual effects on marine benthic communities, including glass sponges, were determined to be negligible or not significant.</p>
189	81 - 1	J King	Nanaimo, BC	another poison pusher for dollars....when are they going to learn you can not drink or breathe money	Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
190	82 - 1	Gerry Prins	West Vancouver, BC	<p>It's time to stop restriction of trade and opposition to marketing Canada's resources.</p> <p>Get on with it, the jobs are needed and it's a product that can be value-added right on the lower mainland.</p> <p>When the area is mined out the locals will have a beautiful fresh water lake on their doorstep.</p> <p>This company is jumping through every hoop to satisfy all concerned</p>	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

191	83 - 1	Jim Noon	Halfmoon Bay, BC	<p>This is copied from the application.</p> <p>"BURNCO proposes to develop its own aggregate source much closer to its existing ready-mix concrete plants in the Lower Mainland. A closer supply of sand and gravel to the Lower Mainland, with reduced transportation costs, will provide more sustainable environmental options to facilitate future viable business growth. The Proponent's three other divisions (i.e., concrete, aggregate and landscape) require access to an aggregate resource to meet projected demands in the BC marketplace. Development of the Proposed Project will result in up to a 280 km one-way reduction in tug and barge tow distance from the current furthest aggregate source (i.e., Port McNeil) to the Proponent's Lower Mainland operations."</p> <p>The LeHigh operation in Sechelt is equidistant from the Lower Mainland. The proponent can continue to source product from Sechelt for many years to come.</p> <p>This project is not a 'more sustainable environmental option.' It's not much more than an opportunity for the proponent to maximize profits.</p> <p>This project is not required and will be a detriment to Howe Sound and nearby residents.</p> <p>I do not support this project.</p>	<p>A further source of aggregate material is required to ensure the reliability of supply. Securing alternate suppliers is not the preferred long-term option for BURNCO as there is too much uncertainty surrounding the ability to supply aggregate material during times of increased demand, in addition to the inability to control the quality and price of material.</p>
192	84 - 1	Personal Information Withheld	Horseshoe Bay, BC	<p>There is only so much nature to go around, and precious little near major population centres. BC has a lot of resources. Excavate someplace further from society and preserve our peace and natural near-urban spaces.</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

193	85 - 1	Personal Information Withheld	Squamish, BC	I do not support the application based upon the fact that the success or failure of risk mitigation cannot be unequivocally confirmed in advance and, given the only recent ecological recovery of Howe Sound, any degree of potential risk is simply too much.	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors' environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
194	85 - 2	Personal Information Withheld	Squamish, BC	In the past 10 years, the Howe Sound recovery has been remarkable. From personally witnessing the first sighting of humpback in decades, to now watching orcas regularly cruise the Ramilles and Montague channels and seeing dolphin even just today, there is no amount of risk that is acceptable when considering any possible jeopardy to the natural habitat or, worse yet, any resumption of a damaged and dying ecosystem. We cannot move backwards when we have come so far.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
195	86 - 1	Personal Information Withheld	Langley, BC	I am strongly opposed to the Burnco aggregate project in Howe Sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

196	86 - 2	Personal Information Withheld	Langley, BC	Visually the valley will be destroyed forevermore.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
197	86 - 3	Personal Information Withheld	Langley, BC	The constant noise will make the surrounding area untenable for recreational use. Noise travels well across a body of water and will impact all within earshot. This site is too close to existing users of upper Howe Sound.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR D noise bylaw was considered as part of the assessment.</p>
198	87 - 1	Personal Information Withheld	Burnaby, BC	This project should be abandoned.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

217	91 - 7	Kristin Leahy Plant	North Vancouver, BC	Gravel pits by their very nature embody noise, airborne pollution and in this instance may have impact on the ocean due to its proximity. I believe there is gravel available to concrete manufacturers elsewhere and this proposed pit allows a relative newcomer to compete with the current players already in this field.	Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.
218	91 - 8	Kristin Leahy Plant	North Vancouver, BC	Why should we as British Columbians allow an impact of this nature to our precious environment so close to Vancouver by an Albertan company and for the sake of only twelve jobs!	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
219	91 - 9	Kristin Leahy Plant	North Vancouver, BC	<p>We believe an approval of this application would be complete lack of foresight. In summary this is a small business opportunity with the potential for considerable environmental impact and yet with zero upside for both residents and visitors to the Lower Mainland and the Sunshine Coast .</p> <p>Again we encourage you to decline Burnco's application: their profit isn't worth the ill will that this project brings to Howe Sound</p>	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

223	92 - 4	C Bradbury	Lions Bay, BC	c) natural, indigenous wildlife is slowly but defiantly returning to the once inhospitable Howe Sound, as a generation trying to look forward to a future where we work with the land and not destroy it and everything that depends upon it, this application should have been denied a long time ago.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
224	93 - 1	Frank Rytir	North Vancouver, BC	I AM STONGLY OPPOSED TO THIS PROJECT AS IT IS LAST CENTURY CLOUSE TO VANCOUVER FOR PEOPLE TO ANJOY.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
225	94 - 1	Karen Richardson	Brackendale, BC	I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. Thunderbird Yacht Club's sole set of docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. We have spent many thousands of dollars and countless months building a club that continues to attract new members with the attrition of our original members. It is likely the peace and beauty of this location that remains our strongest marketing tool: remote and yet only 30 minutes - 2 hours travel away from our local marinas.  Please decline Burnco's request for a mining permit for McNab Creek.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
226	94 - 2	Karen Richardson	Brackendale, BC	I live in Brackendale, B.C. My specific concerns about a mine in this location are:	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

228	94 - 4	Karen Richardson	Brackendale, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>

229	94 - 5	Karen Richardson	Brackendale, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
230	94 - 6	Karen Richardson	Brackendale, BC	<p>Our club is concerned that the dust and the possibility of harmful airborne chemicals released during the processing of aggregate may evolve as a health issue for children and for those with compromised respiratory systems. I personally have respiratory issues and I fear for the affects on my health.</p>	<p>A detailed assessment of potential public health effects of the Proposed Project is presented in Volume 2, Part B – Section 9.1 of the EAC Application/EIS.</p> <p>Potential effects of the Proposed Project on human health assessed considered activities contributing to air emissions, deposition of particulate matter to terrestrial environments, and emission of substances to aquatic environments.</p> <p>Following the application of proposed mitigation, all potential health effects were determined to be negligible or not significant.</p>

231	94 - 7	Karen Richardson	Brackendale, BC	<p>Our members use the foreshore area/estuary (the sole estuary in the area) of McNabb Creek for recreation of fishing, prawning and crabbing. Not only will a mine and it's accompanying marine traffic greatly diminish the marine life populations that support fishing, the risk to our small dingies/boats from the increased tug/barge and water taxi traffic exists as another consideration that could diminish our interest in returning to this area.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
232	94 - 8	Karen Richardson	Brackendale, BC	<p>Our members use the foreshore area/estuary (the sole estuary in the area) of McNabb Creek for recreation of fishing, prawning and crabbing. Not only will a mine and it's accompanying marine traffic greatly diminish the marine life populations that support fishing, the risk to our small dingies/boats from the increased tug/barge and water taxi traffic exists as another consideration that could diminish our interest in returning to this area.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
233	94 - 9	Karen Richardson	Brackendale, BC	<p>Our members use the foreshore area/estuary (the sole estuary in the area) of McNabb Creek for recreation of fishing, prawning and crabbing. Not only will a mine and it's accompanying marine traffic greatly diminish the marine life populations that support fishing, the risk to our small dingies/boats from the increased tug/barge and water taxi traffic exists as another consideration that could diminish our interest in returning to this area.</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

234	94 - 10	Karen Richardson	Brackendale, BC	<p>We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats that are moored without adequately-placed protection from their fenders are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats.</p> <p>We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis.</p> <p>The wakes of commercial vessels listed above also present risks to kayakers, paddleboarders, swimmers, water-skiers. Many of our children have learned to swim at this dock.</p> <p>We feel that our safety on the water could be compromised. There have been an increased number of paddle boarders this past summer..Our family have enjoyed the safety of peaceful waters this past summer.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
235	94 - 11	Karen Richardson	Brackendale, BC	<p>In 2012, we determined that Thunderbird Yacht Club spent \$161,054.00 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. This amount can only have increased since that time. If our membership or our interest in Howe Sound is diminished, the business that we bring to the Sunshine Coast could be similarly lessened.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
236	94 - 12	Karen Richardson	Brackendale, BC	<p>Calgary-based Burnco Rock Products donated \$34,000 to the Liberals, bringing their eight year running total to \$219,700. Writes Dermot Travis, executive director of Integrity BC, 23 April 2014. This amount is considered by the author to be 'outlandish'. At this time \$286,700.00 has been donated by Burnco to the BC Liberal Government. Please refer to the attached file. One can only wonder why Burnco would donate such a large amount to the current government.</p>	<p>Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

243	95 - 2	Laurie Dye	North Vancouver, BC	<p>I live in North Vancouver. My specific concerns about a mine in this location are to protect the pristine condition of Howe Sound. I have travelled to many other countries in the world, and have yet to find such a beautiful place as Howe Sound, so near a big city.</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
245	95 - 4	Laurie Dye	North Vancouver, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>

246	95 - 5	Laurie Dye	North Vancouver, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for its current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
247	95 - 6	Laurie Dye	North Vancouver, BC	<p>Our club is concerned that the dust and the possibility of harmful airborne chemicals released during the processing of aggregate may evolve as a health issue for children and for those with compromised respiratory systems.</p>	<p>A detailed assessment of potential public health effects of the Proposed Project is presented in Volume 2, Part B – Section 9.1 of the EAC Application/EIS.</p> <p>Potential effects of the Proposed Project on human health assessed considered activities contributing to air emissions, deposition of particulate matter to terrestrial environments, and emission of substances to aquatic environments.</p> <p>Following the application of proposed mitigation, all potential health effects were determined to be negligible or not significant.</p>

251	95 - 10	Laurie Dye	North Vancouver, BC	<p>We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats that are moored without adequately-placed protection from their fenders are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats.</p> <p>We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis.</p> <p>The wakes of commercial vessels listed above also present risks to kayakers, paddleboarders, swimmers, water-skiers. Many of our children have learned to swim at this dock.</p> <p>We feel that our safety on the water could be compromised.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
252	95 - 11	Laurie Dye	North Vancouver, BC	<p>In 2012, we determined that Thunderbird Yacht Club spent \$161,054.00 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. This amount can only have increased since that time. If our membership or our interest in Howe Sound is diminished, the business that we bring to the Sunshine Coast could be similarly lessened.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
253	95 - 12	Laurie Dye	North Vancouver, BC	<p>Calgary-based Burnco Rock Products donated \$34,000 to the Liberals, bringing their eight year running total to \$219,700. Writes Dermot Travis, executive director of Integrity BC, 23 April 2014. This amount is considered by the author to be 'outlandish'. At this time \$286,700.00 has been donated by Burnco to the BC Liberal Government. Please refer to the attached file. One can only wonder why Burnco would donate such a large amount to the current government.</p>	<p>Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

255	95 - 14	Laurie Dye	North Vancouver, BC	<p>Our children and grandchildren saw whales /dolphins/deer/otters this past summer in Howe Sound opposite McNabb Creek. This experience outside of their usual city life was priceless and unforgettable. What is the dollar value placed on a child (or any adult for that matter) seeing a whale for the first time?</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
256	95 - 15	Laurie Dye	North Vancouver, BC	<p>My family and I watched meteor showers this summer from our boat in Howe Sound: it was a priceless experience. Lights from a gravel mine will almost certainly diminish the night sky. We value this remote area precisely for such advantages as an unobstructed night sky.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
257	95 - 16	Laurie Dye	North Vancouver, BC	<p>Burnco executives will not commit to complete this project in 16 years: they have been quoted as intending to maximizing this resource. It remains uncertain if Burnco will wish to extend beyond 16 years.</p>	<p>The Proposed Project is to extract approximately 20 million tonnes of sand and gravel over the 16 year life of the Proposed Project. This will be reflected in an approved EA certificate and mine plan.</p>

258	95 - 17	Laurie Dye	North Vancouver, BC	At this time, we are unaware of a commitment from Burnco to provide a public forum with which we might monitor and assess compliance to Burnco's original plan.	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>BURNCO will establish a Community Advisory Group (CAG) to provide a forum for interested stakeholders to review, discuss and make recommendations. CAG terms of reference and meeting minutes will be made available online.</p>
259	95 - 18	Laurie Dye	North Vancouver, BC	At this time, we understand that there is no current shortage of gravel in the lower mainland.	<p>The Proposed Project will provide sand and gravel that will be used to meet the growing demands of the BC marketplace.</p> <p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>

It is a living breathing science project directly opposite our docks and we use this remote and pristine area to educate our children/grandchildren the value of conservation for their children's enjoyment.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

278	97 - 8	Mrs. Kristin Leahy Plant	North Vancouver, BC	Why should we as British Columbians allow an impact of this nature to our precious environment so close to Vancouver by an Albertan company and for the sake of only twelve jobs!	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
279	96 - 1	Mrs. Shelagh Leahy	North Vancouver, BC	<p>We believe an approval of this application would be complete lack of foresight. In summary this is a small business opportunity with the potential for considerable environmental impact and yet with zero upside for both residents and visitors to the Lower Mainland and the Sunshine Coast .</p> <p>Again we encourage you to decline Burnco's application: their profit isn't worth the ill will that this project brings to Howe Sound</p>	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
280	98 - 1	Stephen Leahy	North Vancouver, BC	As a long time resident of North Van and an active boater in Howe Sound , I do not want the Burnco gravel operation to be built @ McNabb Creek.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

281	98 - 2	Stephen Leahy	North Vancouver, BC	I know Howe Sound very well, having been on the water there since I was a child( many years ago). It has only been the last few years that I have noticed the "return" of many forms of sea life that were absent for decades.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
282	98 - 3	Stephen Leahy	North Vancouver, BC	I know Howe Sound very well, having been on the water there since I was a child( many years ago). It has only been the last few years that I have noticed the "return" of many forms of sea life that were absent for decades.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
283	98 - 4	Stephen Leahy	North Vancouver, BC	I am also a member of Thunderbird Yacht Club located @ Ekins Point, Gambier, directly across from the proposed gravel operation at McNabb and we WILL be greatly affected by noise, by dust, by the destruction of the McNabb crab/shrimping grounds and by the disastrous effects of a massive increase in commercial boating traffic.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>

289	99 - 1	P J	Yaletown, BC	<p>I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. Thunderbird Yacht Club's sole set of docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. We have spent many thousands of dollars and countless months building a club that continues to attract new members with the attrition of our original members. It is likely the peace and beauty of this location that remains our strongest marketing tool: remote and yet only 30 minutes - 2 hours travel away from our local marinas.</p> <p>Please decline Burnco's request for a mining permit for McNab Creek.</p>	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
290	99 - 2	P J	Yaletown, BC	I live in Yaletown, Vancouver, B.C. My specific concerns about a mine in this location are:	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

292	99 - 4	P J	Yaletown, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. 293	99 - 5	P J	Yaletown, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
294	99 - 6	P J	Yaletown, BC	<p>Our club is concerned that the dust and the possibility of harmful airborne chemicals released during the processing of aggregate may evolve as a health issue for children and for those with compromised respiratory systems.</p>	<p>A detailed assessment of potential public health effects of the Proposed Project is presented in Volume 2, Part B – Section 9.1 of the EAC Application/EIS.</p> <p>Potential effects of the Proposed Project on human health assessed considered activities contributing to air emissions, deposition of particulate matter to terrestrial environments, and emission of substances to aquatic environments.</p> <p>Following the application of proposed mitigation, all potential health effects were determined to be negligible or not significant.</p>

298	99 - 10	P J	Yaletown, BC	<p>We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats that are moored without adequately-placed protection from their fenders are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats.</p> <p>We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis.</p> <p>The wakes of commercial vessels listed above also present risks to kayakers, paddleboarders, swimmers, water-skiers. Many of our children have learned to swim at this dock.</p> <p>We feel that our safety on the water could be compromised.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
299	99 - 11	P J	Yaletown, BC	<p>In 2012, we determined that Thunderbird Yacht Club spent \$161,054.00 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. This amount can only have increased since that time. If our membership or our interest in Howe Sound is diminished, the business that we bring to the Sunshine Coast could be similarly lessened.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
300	99 - 12	P J	Yaletown, BC	<p>Calgary-based Burnco Rock Products donated \$34,000 to the Liberals, bringing their eight year running total to \$219,700. Writes Dermot Travis, executive director of Integrity BC, 23 April 2014. This amount is considered by the author to be 'outlandish'. At this time \$286,700.00 has been donated by Burnco to the BC Liberal Government. Please refer to the attached file. One can only wonder why Burnco would donate such a large amount to the current government.</p>	<p>Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

302	99 - 14	P J	Yaletown, BC	<p>Our friends grandchildren saw whales /dolphins/deer/otters this past summer in Howe Sound opposite McNabb Creek. This experience outside of their usual city life was priceless and unforgettable. What is the dollar value placed on a child (or any adult for that matter) seeing a whale for the first time?</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
303	99 - 15	P J	Yaletown, BC	<p>Burnco executives will not commit to complete this project in 16 years: they have been quoted as intending to maximizing this resource. It remains uncertain if Burnco will wish to extend beyond 16 years.</p>	<p>The Proposed Project is to extract approximately 20 million tonnes of sand and gravel over the 16 year life of the Proposed Project. This will be reflected in an approved EA certificate and mine plan.</p>
304	99 - 16	P J	Yaletown, BC	<p>At this time, we are unaware of a commitment from Burnco to provide a public forum with which we might monitor and assess compliance to Burnco's original plan.</p> <p>Burnco's reputation as a neighbour in Alberta is known to be adversarial. Citizens of Cougar Ridge have learned, following 10 years of Burnco as their neighbour, that Burnco does not adhere to it's original commitment as they fully understand the limited power within local governments to enforce them to comply.</p>	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>BURNCO will establish a Community Advisory Group (CAG) to provide a forum for interested stakeholders to review, discuss and make recommendations. CAG terms of reference and meeting minutes will be made available online.</p>
305	99 - 17	P J	Yaletown, BC	<p>Again we encourage you to decline Burnco's application: their profit isn't worth the ill will that this project brings to Howe Sound.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

306	100 - 1	Josef Loew	Vancouver, BC	I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. Thunderbird Yacht Club's sole set of docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. We have spent many thousands of dollars and countless months building a club that continues to attract new members with the attrition of our original members. It is likely the peace and beauty of this location that remains our strongest marketing tool: remote and yet only 30 minutes - 2 hours travel away from our local marinas.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
307	100 - 2	Josef Loew	Vancouver, BC	My specific concerns about a mine in this location are:	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
308	100 - 3	Josef Loew	Vancouver, BC	The economic gain belongs solely to Burnco, while it destroys our peace and enjoyment of this spectacular vista. I understand and respect Burnco's work to maximize shareholder value. I am a fan of capitalism. They bought the place on spec and once it is re-zoned they will have made a fortune. But sometimes you lose and this project will put a stopper in developing north Howe Sound into the recreational paradise it should be. Please put the peoples' interest first in this instance. It will send a message that the Liberal government is not just bought. (Calgarybased Burnco Rock Products donated \$34,000 to the Liberals, bringing their eight year running total to \$219,700. Writes Dermot Travis, executive director of Integrity BC, 23 April 2014. I consider this amount 'outlandish'. At this time \$286,700.00 has been donated by Burnco to the BC Liberal Government.)	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>

309	100 - 4	Josef Loew	Vancouver, BC	The Province recently installed a series of camp sites in the sound to improve access for kayak tours. I visited Bain Creek last weekend. A wonderful development of the west coast's southern-most sound. It can be developed into a spectacular wilderness recreation area just an hour from Vancouver. I had friends from Europe up and they could not believe what we have in our backyard. They have to fly to Norway to see anything even close to Howe Sound.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
310	100 - 5	Josef Loew	Vancouver, BC	My niece saw orcas and dolphins this past summer in Howe Sound opposite McNabb Creek. We caught crabs and prawns. The orcas and prawns are just coming back after Britannia has been cleaned up. Why chase them out again for a little bit of gravel?	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
311	100 - 6	Josef Loew	Vancouver, BC	My niece saw orcas and dolphins this past summer in Howe Sound opposite McNabb Creek. We caught crabs and prawns. The orcas and prawns are just coming back after Britannia has been cleaned up. Why chase them out again for a little bit of gravel?	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

312	100 - 7	Josef Loew	Vancouver, BC	Noise reverberates off the mountains surrounding this site. I spent last week end there and the current logging operation was running a backhoe way back in the property. The noise was focused by the valley, like in an ancient roman amphitheatre, and really disrupted the peace of the area. Although the Burnco plan includes a berm, I can now testify that berms offer little mitigation to sound over water. You still have a point-source of noise that the natural amphitheatre created by the valley will amplify with great efficiency. (I have a Master Degree in Engineering Physics and am confident that the scientists on the review team will agree.) Burnco's application indicates that noise would be as loud as a 'fridge running' this simply is not true--and you are welcome to come out to the club to verify this. It is precisely this type of 'white' urban noise we seek get away from at Ekins Point. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>
313	100 - 8	Josef Loew	Vancouver, BC	Noise reverberates off the mountains surrounding this site. I spent last week end there and the current logging operation was running a backhoe way back in the property. The noise was focused by the valley, like in an ancient roman amphitheatre, and really disrupted the peace of the area. Although the Burnco plan includes a berm, I can now testify that berms offer little mitigation to sound over water. You still have a point-source of noise that the natural amphitheatre created by the valley will amplify with great efficiency. 314	100 - 9	Josef Loew	Vancouver, BC	<p>While I was at the dock, a large crew transported roared up the far shore close to McNab. The wake took a while to arrive but the east dock rocked so hard that the old man walking on it had to go down to his knees to avoid being thrown down. I wish I had a video ready. It was a scary how the docks rolled. We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats. We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>

324	101 - 10	Carl and Carolyn MacRae	Furry Creek, BC	Again we encourage you to decline Burnco's application---why do we want to regress back creating again to a "dead" Howe Sound environment. Resonating "white" noise not only affects us but even more importantly, the orcas and dolphins who have come back to our sound. We agree pollution this time is different than chemicals, but one still has to understand it is a form of pollution to our fish habitats.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
325	102 - 1	Diana and Ken Lyons	Squamish, BC	I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. My Husband and I have been avid boaters in BC for the last thirty years and members of Thunderbird Yacht Club for the last nine years. Thunderbird Yacht Club's docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. Our club has spent 40 years building and maintaining 2 docks that can handle > 70 boats of all sizes at any given time.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
326	102 - 2	Diana and Ken Lyons	Squamish, BC	We both attended the Burnco open house which was held on September 12th in Squamish to get answers to our questions and voice our concerns. Over all I was impressed with the level of work which has been done by the EA, and found the information provided helpful. However, we remain opposed to the project for the following reasons;	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

330	102 - 6	Diana and Ken Lyons	Squamish, BC	4. The provincial government has been asked numerous times over the last 5 years to treat Howe Sound as one area when considering further development. Since the successful multi-million dollar clean up to the old Britannia Mine site, the sea life has started to recover and regular sightings of Orcas and Dolphins are being reported, and I have witnessed several myself. Why chase them out again for a little bit of gravel? The Sound needs an integrated land and marine use plan that carefully weighs the benefits of development with the potential of Howe Sound as a vibrant, healthy, spectacular destination.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
331	102 - 7	Diana and Ken Lyons	Squamish, BC	5. Commercial boat wakes pose a significant challenge for our club. While I appreciate that the operation is weekdays only, employees will be transported by water taxi from Gibsons, Squamish and Vancouver everyday. Unfortunately, these boats create a significant wake and have damaged our docks and knocked members to their knees. My Dog could not stand up during a particularly large wake and had to lay down to avoid being thrown off the dock. As you likely know, boat operators are responsible for any damage caused by their wake. Should this project go ahead, we will monitor, document and report any damage or injuries as a result.	Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.  There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.  Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.  Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.
332	102 - 8	Diana and Ken Lyons	Squamish, BC	6. This isn't just about a couple of yacht clubs across the channel. Thousands of boaters enjoy the back end of Gambier Island because it is a safe, protected area. The water is warm and very little wind blows through this area making it ideal for recreation of all kinds. The Burnco project will diminish everyone's enjoyment of the channel.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
333	102 - 9	Diana and Ken Lyons	Squamish, BC	Lastly, should this project be approved by the liberal government, I will continue to express my opposition by voting for an alternate party. I was dismayed to learn the level of contribution to the liberal part by Burnco. This hardly seems appropriate given the profits expected to be made by Burnco.	Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

334	102 - 10	Diana and Ken Lyons	Squamish, BC	I sincerely hope that you deny this application for the good of Howe Sound, local residents, Tourism and BC tax payers.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
335	103 - 1	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. Thunderbird Yacht Club's sole set of docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. Our club has spent > 40 years building and maintaining 2 docks that can handle > 70 boats of all sizes at any given time. We have spent many thousands of dollars and countless months building a club that continues to attract new members with the attrition of our original members. It is likely the peace and beauty of this location that remains our strongest marketing tool: remote and yet only 30 minutes - 2 hours travel away from our local marinas. Please decline Burnco's request for a mining permit for McNab Creek.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
336	103 - 2	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	I reside in West Vancouver and have so for most of my life. I have enjoyed Howe Sound since I was a child spending weekends at our cabin on Passage Island. As an adult and a member of both West Vancouver Yacht Club and Thunderbird Yacht Club, my husband and myself travel extensively in Howe Sound. The beauty of it is worth far more than a gravel pit.	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
337	103 - 3	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.

338	103 - 4	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
339	103 - 5	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	<p>Our club is concerned that the dust and the possibility of harmful airborne chemicals released during the processing of aggregate may evolve as a health issue.</p>	<p>A detailed assessment of potential public health effects of the Proposed Project is presented in Volume 2, Part B – Section 9.1 of the EAC Application/EIS.</p> <p>Potential effects of the Proposed Project on human health assessed considered activities contributing to air emissions, deposition of particulate matter to terrestrial environments, and emission of substances to aquatic environments.</p> <p>Following the application of proposed mitigation, all potential health effects were determined to be negligible or not significant.</p>

343	103 - 9	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	<p>We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats that are moored without adequately-placed protection from their fenders are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet.</p> <p>This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats. We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel.</p> <p>The wakes of commercial vessels listed above also present risks to kayakers, paddle-boarders, swimmers, water-skiers. Many of our children have learned to swim at this dock. We feel that our safety on the water could be compromised.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
344	103 - 10	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	<p>In 2012, we determined that Thunderbird Yacht Club spent \$161,054.00 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. This amount can only have increased since that time. If our membership or our interest in Howe Sound is diminished, the business that we bring to the Sunshine Coast could be similarly lessened.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
345	103 - 11	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	<p>The McNab Creek estuary remains both rare and productive. It is a living breathing science project directly opposite our docks and we use this remote and pristine area to educate our children/grandchildren the value of conservation for their children's enjoyment.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. 346	103 - 12	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	We saw whales /dolphins/deer/otters this past summer in Howe Sound opposite McNab Creek. . This experience was priceless. At this time, we understand that there is no current shortage of gravel in the lower mainland. Burnco's mining of this spectacular valley is solely for their profit: we see no local advantage that this mine could provide.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
347	103 - 13	Dr. Catherine Mari and Mr. Eric Norlin	West Vancouver, BC	Again we encourage you to decline Burnco's application.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
348	104 - 1	William R. Clark and Patricia M. Clark	Not Stated	I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. Thunderbird Yacht Club's docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. Our club has spent 40 years building and maintaining 2 docks that can handle over 70 boats of all sizes at any given time. We have spent many tens of thousands of dollars over the years building a club that continues to attract new members as space becomes available through attrition. The peace and beauty of this location is our strongest marketing tool: remote and yet only 30 minutes to 2 hours travel away from our local marinas.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
349	104 - 2	William R. Clark and Patricia M. Clark	Not Stated	As new members of The Thunderbird Yacht Club, our specific concerns are the negative environmental impact the Burnco development will have, not just on the northern areas of Howe Sound but on all of the communities within the sound.	Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.  The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.  A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.

350	104 - 3	William R. Clark and Patricia M. Clark	Not Stated	The gain belongs solely to Calgary based Burnco Rock Products, while it destroys our peace and enjoyment of this spectacular vista. I understand and respect Burnco's right to maximize shareholder value but it must be balanced with the protection of our marine environment, particularly one so close to the lower mainland.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
351	104 - 4	William R. Clark and Patricia M. Clark	Not Stated	Thunderbird Yacht Club members spend something in the order of \$160,000 per year in the local communities on fuel, groceries, restaurants and other marine services. We are but a small group compared to the boating community as a whole. If Howe Sound is allowed to become another industrial zone, hundreds of thousands of dollars will vanish from the local economy. In return, Burnco will provide a handful of jobs and the whole economic gain from this development will vacate British Columbia and add to the bottom line of this Calgary based company.	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. 352	104 - 5	William R. Clark and Patricia M. Clark	Not Stated	Howe Sound is every bit as beautiful as Desolation Sound, yet is only a 2 to 3 hour cruise from the lower mainland of Vancouver, versus a 2 to 3 day cruise to Desolation. This makes it a marine vista that is accessible to countless numbers of people who would never have such an experience if they had to travel for 3 days to see it.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
353	104 - 6	William R. Clark and Patricia M. Clark	Not Stated	After generations of their absence Orcas, Gray whales, Dolphins, star fish, prawns and Dungeness crab are returning to the north sound. This is a result of the cleaning up of past developments that forced their departure. Let's learn from our past mistakes. Given a chance, Howe Sound can return to the pristine marine environment it once must have been. Given half a chance it can become a model of what can be done to protect our world for the generations following us to enjoy and learn from. Let's not force the newly returning marine life to leave yet again.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
354	104 - 7	William R. Clark and Patricia M. Clark	Not Stated	After generations of their absence Orcas, Gray whales, Dolphins, star fish, prawns and Dungeness crab are returning to the north sound. 357	105 - 1	John S. Cain	Not Stated	A large scale gravel mine continues to press forward at McNab Creek, smack in the middle of the Sound. This is the worst idea ever. Why would this be approved despite the risks and low job creation. Not worthy of the destruction of the land and risk to estuaries. Please consider the harm to the environment and do not allow this application to proceed. I am sure BURNCO can find other opportunities for the aggregate they seek.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
358	106 - 1	Tanis Layzell	Bowen Island, BC	Please do not put the gravel pit in Howe Sound. Years of clean up have been done and finally the whales and dolphins are back to Howe Sound. Humans need a tranquil environment as well to get back to nature. Dept. of Fisheries has turned it down 2X. Please get the message that the majority of the people don't want it. Don't make a mess of Howe Sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
359	107 - 1	Personal Information Withheld	Squamish, BC	I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. Thunderbird Yacht Club's sole set of docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. We have spent many thousands of dollars and countless months building a club that continues to attract new members with the attrition of our original members. It is likely the peace and beauty of this location that remains our strongest marketing tool: remote and yet only 30 minutes - 2 hours travel away from our local marinas.  Please decline Burnco's request for a mining permit for McNab Creek.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
360	107 - 2	Personal Information Withheld	Squamish, BC	I live in Squamish and am a past Commodore of the Thunderbird Yacht Club. My specific concerns about a mine in this location are:	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

361	107 - 3	Personal Information Withheld	Squamish, BC	<p>The socioeconomic benefit for the mine is marginal for the area with the potential to have a negative outcome if boaters such as myself find the quiet enjoyment ruined and take our business elsewhere. The economic gain belongs solely to Burnco, while it destroys our peace and enjoyment of this spectacular vista: a dust/smoke/lights-at-night eyesore that will be visible greatly reduces our ability to attract new members. This project brings no economic or social advantage to our club.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
362	107 - 4	Personal Information Withheld	Squamish, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>

363	107 - 5	Personal Information Withheld	Squamish, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
364	107 - 6	Personal Information Withheld	Squamish, BC	<p>Our club is concerned that the dust and the possibility of harmful airborne chemicals released during the processing of aggregate may evolve as a health issue for children and for those with compromised respiratory systems.</p>	<p>A detailed assessment of potential public health effects of the Proposed Project is presented in Volume 2, Part B – Section 9.1 of the EAC Application/EIS.</p> <p>Potential effects of the Proposed Project on human health assessed considered activities contributing to air emissions, deposition of particulate matter to terrestrial environments, and emission of substances to aquatic environments.</p> <p>Following the application of proposed mitigation, all potential health effects were determined to be negligible or not significant.</p>

368	107 - 10	Personal Information Withheld	Squamish, BC	<p>We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats that are moored without adequately-placed protection from their fenders are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats.</p> <p>We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis.</p> <p>The wakes of commercial vessels listed above also present risks to kayakers, paddleboarders, swimmers, water-skiers. Many of our children have learned to swim at this dock.</p> <p>We feel that our safety on the water could be compromised.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
369	107 - 11	Personal Information Withheld	Squamish, BC	<p>In 2012, we determined that Thunderbird Yacht Club spent \$161,054.00 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. This amount can only have increased since that time. If our membership or our interest in Howe Sound is diminished, the business that we bring to the Sunshine Coast could be similarly lessened.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
370	107 - 12	Personal Information Withheld	Squamish, BC	<p>Calgary-based Burnco Rock Products donated \$34,000 to the Liberals, bringing their eight year running total to \$219,700. Writes Dermot Travis, executive director of Integrity BC, 23 April 2014. This amount is considered by the author to be 'outlandish'. At this time \$286,700.00 has been donated by Burnco to the BC Liberal Government. Please refer to the attached file. One can only wonder why Burnco would donate such a large amount to the current government.</p>	<p>Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

371	107 - 13	Personal Information Withheld	Squamish, BC	<p>The McNab Creek estuary remains both rare and productive. It is a living breathing science project directly opposite our docks and we use this remote and pristine area to educate our children/grandchildren the value of conservation for their children's enjoyment.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
372	107 - 14	Personal Information Withheld	Squamish, BC	<p>My grandchildren saw whales /dolphins/deer/otters this past summer in Howe Sound opposite McNabb Creek. This experience outside of their usual city life was priceless and unforgettable. What is the dollar value placed on a child (or any adult for that matter) seeing a whale for the first time?</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
373	107 - 15	Personal Information Withheld	Squamish, BC	<p>My family and I watched meteor showers this summer from our boat in Howe Sound: it was a priceless experience. Lights from a gravel mine will almost certainly diminish the night sky. We value this remote area precisely for such advantages as an unobstructed night sky.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
374	107 - 16	Personal Information Withheld	Squamish, BC	<p>Burnco executives will not commit to complete this project in 16 years: they have been quoted as intending to maximizing this resource. It remains uncertain if Burnco will wish to extend beyond 16 years.</p>	<p>The Proposed Project is to extract approximately 20 million tonnes of sand and gravel over the 16 year life of the Proposed Project. This will be reflected in an approved EA certificate and mine plan.</p>

404	113 - 9	Personal Information Withheld	Furry Creek, BC	<p>Water wakes are also a major concern.. We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats. We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis. Further , and as an owner at Olivers Landing in Furry Creek, spit erosion from wakes and tides has caused foreshore erosion which Squamish District is aware of since 2010 and ongoing discussions are trying to resolve a solution to present problem.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. 409	114 - 4	Personal Information Withheld	Vancouver, BC	The scope of thinking on this appears to be very narrow and extremely short-sighted. I do not believe this project is to the benefit of the region or any BC tax payer. There are better options for the region.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
410	115 - 1	Mark Edmonds	Bowen Island, BC	I wholeheartedly disagree with the Burnco Aggregate Project.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
411	115 - 2	Mark Edmonds	Bowen Island, BC	The damage to the only, largely unspoilt, major estuary in Howe Sound is unacceptable- especially at a time when Howe Sound is finally recovering from decades of abuse. That recovery coming from many hours of professional and volunteer work and a significant amount of taxpayer dollars. I ask the province to reject this proposal.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

415	116 - 4	Josef Loew	Vancouver, BC	The Province recently installed a series of camp sites in the sound to improve access for kayak tours. I visited Bain Creek last weekend. A wonderful development of the west coast's southern-most sound. It can be developed into a spectacular wilderness recreation area just an hour from Vancouver. I had friends from Europe up and they could not believe what we have in our backyard. They have to fly to Norway to see anything even close to Howe Sound.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
416	116 - 5	Josef Loew	Vancouver, BC	My niece saw orcas and dolphins this past summer in Howe Sound opposite McNabb Creek. We caught crabs and prawns. The orcas and prawns are just coming back after Britannia has been cleaned up. Why chase them out again for a little bit of gravel?	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
417	116 - 6	Josef Loew	Vancouver, BC	My niece saw orcas and dolphins this past summer in Howe Sound opposite McNabb Creek. We caught crabs and prawns. The orcas and prawns are just coming back after Britannia has been cleaned up. Why chase them out again for a little bit of gravel?	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

418	116 - 7	Josef Loew	Vancouver, BC	Noise reverberates off the mountains surrounding this site. I spent last week end there and the current logging operation was running a backhoe way back in the property. The noise was focused by the valley, like in an ancient roman amphitheatre, and really disrupted the peace of the area. Although the Burnco plan includes a berm, I can now testify that berms offer little mitigation to sound over water. You still have a point-source of noise that the natural amphitheatre created by the valley will amplify with great efficiency. (I have a Master Degree in Engineering Physics and am confident that the scientists on the review team will agree.) Burnco's application indicates that noise would be as loud as a 'fridge running' this simply is not true--and you are welcome to come out to the club to verify this. It is precisely this type of 'white' urban noise we seek get away from at Ekins Point. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>
419	116 - 8	Josef Loew	Vancouver, BC	Noise reverberates off the mountains surrounding this site. I spent last week end there and the current logging operation was running a backhoe way back in the property. The noise was focused by the valley, like in an ancient roman amphitheatre, and really disrupted the peace of the area. Although the Burnco plan includes a berm, I can now testify that berms offer little mitigation to sound over water. You still have a point-source of noise that the natural amphitheatre created by the valley will amplify with great efficiency. (I have a Master Degree in Engineering Physics and am confident that the scientists on the review team will agree.) Burnco's application indicates that noise would be as loud as a 'fridge running' this simply is not true--and you are welcome to come out to the club to verify this. It is precisely this type of 'white' urban noise we seek get away from at Ekins Point. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>

420	116 - 9	Josef Loew	Vancouver, BC	<p>While I was at the dock, a large crew transported roared up the far shore close to McNab. The wake took a while to arrive but the east dock rocked so hard that the old man walking on it had to go down to his knees to avoid being thrown down. I wish I had a video ready. It was a scary how the docks rolled. We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats. We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
421	117 - 1	Stephen Zimmerman	McNab Creek, BC	<p>Flood prevention dike is not pictured currently. As of July 15 there is hundreds of fallen trees into the creek from wind drawn. This section of creek now has sun 8 hours a day. When 15 years ago it had shade. Giving less than favourable readings. This gives me less confidence in the temperature readings in the environment assessment. Send from info session at Glen Eagle community centre</p>	<p>Temperatures from McNab Creek were used as inputs into groundwater flow model (Appendix 5.6-D of the EAC Application/EIS) as well as inputs into the pit lake hydrodynamic model. Water from McNab Creek reports to the groundwater system in the valley aquifer. There is no direct surface water connection between the surface water from McNab Creek and the watercourses in the Proposed Project Area.</p> <p>Groundwater temperatures were collected from groundwater wells installed in 2010. Well equipment is programmed to record water pressures and temperature at 15 minute intervals. Since initial installation, the recorded data has been downloaded at regular intervals, with the last download occurring in October 2016.</p> <p>In the groundwater flow model (Appendix 5.5-B of the EAC Application/EIS), groundwater temperature data was used to support the analysis of the water loss from McNab Creek to the valley fill aquifer. When this information was compared to the continuous temperature record obtained from the surface water monitoring stations, it was possible to trace the movement of the thermal front through this aquifer in response to seasonally high temperatures in McNab Creek typically observed in the summer months.</p> <p>For the pit lake hydrodynamic model, the groundwater thermal inputs (described above) were used in the thermal and hydrodynamic modelling of the pit lake to obtain the vertical profiles of water temperature and total dissolved concentration (TDS). This data was used to evaluate long-term effects of pit lake releases to the downstream receiving environment.</p> <p>Changes in surface water temperatures in McNab Creek from 15 years ago due to shading effects would not have affected the analysis presented in the EAC Application/EIS. This is due to the timing of the data collections (2010 to 2016) as well as the lack of connectivity of the surface water of McNab Creek and the watercourses in the Proposed Project Area.</p>

422	118 - 1	Gabrielle Senoner	West Vancouver, BC	I [redacted] resident of West Vancouver , object to the proposed Burnco Aggregate Mine Project as it is harmful and it affects the north shore West and other surrounding areas in a very devastating scale at the long term . It will affect our quality of life polluting possibly the water and the land. Mining must not be tolerated for the sake of the economy . There must be other ways to help it by not damaging our environment and future generations.	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>
423	118 - 2	Gabrielle Senoner	West Vancouver, BC	I [redacted] resident of West Vancouver , object to the proposed Burnco Aggregate Mine Project as it is harmful and it affects the north shore West and other surrounding areas in a very devastating scale at the long term . It will affect our quality of life polluting possibly the water and the land. Mining must not be tolerated for the sake of the economy . There must be other ways to help it by not damaging our environment and future generations.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resource is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result in a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted area in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>

And protect by law the aera.</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

427	120 - 1	Personal Information Withheld	Howe Sound, BC	<p>Page 1 of the Executive Summary under Project Description has a major omission. A significant component of this project is the onsite crushing of the materials dredged. Crushing equipment and the process generates significant noise and impacts the zoning of this property. This section makes no mention of the crushing and should be corrected. Omitting rock crushing from the description of the project misleads the reader by attempting to minimize the impact.</p> <p>"Because there is a relatively shallow water table in this area, once the site has been cleared the aggregate resource will be extracted using a clamshell dredge mounted on a floating barge. Aggregate materials will be conveyed to a processing area where sand and gravel products will be stockpiled (Figures 2 and 3). A high efficiency wash plant will use 95% recycled washwater; fines and silt will be removed from the process water for on-site disposal and reclamation. No wash water will be discharged.</p> <p>The processed aggregate material will be conveyed to barges for shipment to BURNCO's existing facilities in Burnaby or Langley (Figure 4).</p>	Crushing of oversized materials, screening and washing were all considered in the effects assessment. The proposed locations of crushers are clearly shown on the operational site layouts drawings presented in the Executive Summary as well as in the EAC Application/EIS.
428	121 - 1	Personal Information Withheld	Vancouver, BC	I am writing to oppose the proposed development. I have boated, kayaked and hiked the McNab area for many years. Current logging puts a temporary dent in accessibility but it is seasonal and goes away. The logging noise is clearly audible and disrupting our peace and quiet enjoyment. I find Burnco's statement that at most I will have to put up with the noise of a fridge an understatement of the situation. The logging machines echo across the sound and the proposed 24h rock crushing operation will be the end of my quiet recuperation on the water at McNab.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>
429	121 - 2	Personal Information Withheld	Vancouver, BC	I am writing to oppose the proposed development. I have boated, kayaked and hiked the McNab area for many years. Current logging puts a temporary dent in accessibility but it is seasonal and goes away. The logging noise is clearly audible and disrupting our peace and quiet enjoyment. I find Burnco's statement that at most I will have to put up with the noise of a fridge an understatement of the situation. The logging machines echo across the sound and the proposed 24h rock crushing operation will be the end of my quiet recuperation on the water at McNab.	<p>The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Considering these factors, the modelled Project contributions to noise levels at NR4 (Eakins Point, inside the LSA and across the water from the Project) were below baseline and resulted in Negligible-Not Significant effects. Therefore the LSA will not be expanded.</p> <p>A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.</p>

430	121 - 3	Personal Information Withheld	Vancouver, BC	I am writing to oppose the proposed development. I have boated, kayaked and hiked the McNab area for many years. Current logging puts a temporary dent in accessibility but it is seasonal and goes away. The logging noise is clearly audible and disrupting our peace and quiet enjoyment. I find Burnco's statement that at most I will have to put up with the noise of a fridge an understatement of the situation. The logging machines echo across the sound and the proposed 24h rock crushing operation will be the end of my quiet recuperation on the water at McNab.	The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCR noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.  Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.
431	121 - 4	Personal Information Withheld	Vancouver, BC	The new kayak campsites the province installed are wonderful but one is just outside McNab and who would want to camp with rock crushing noise ruling the night? Or contend with barges and comuter traffic from Burnco?	Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.  There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.  Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.  Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.
432	121 - 5	Personal Information Withheld	Vancouver, BC	The northern sound is a gem of a recreation paradise for us from Vancouver with orcas, seals, salmon, crabs and the occasional gray whale visiting. The province is just finishing the Britannia clean up and the return of wildlife and pristine water is a spectaculare sucess. Why endanger this for a little bit of grave?	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.

434	121 - 7	Personal Information Withheld	Vancouver, BC	I think it's a bad trade off. Please do not approve this development. In the interest of disclosure, I am not against development as a whole. I support the Kinder Morgan pipeline, the trans mountain (with appropriate investments in safety), site C and the liquefied gas facility up near Squamish. We need development to keep BC prosperous and many developments justify a trade off.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

437	122 - 2	Personal Information Withheld	Vancouver, BC	Gravel is not worth the impact a crushing plant will have on the wildlife habitat and human enjoyment of one of the most beautiful sounds in the province.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>
438	122 - 3	Personal Information Withheld	Vancouver, BC	Gravel is not worth the impact a crushing plant will have on the wildlife habitat and human enjoyment of one of the most beautiful sounds in the province.	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>

439	123 - 1	Neil McClelland	Nanaimo, BC	<p>I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. Thunderbird Yacht Club's sole set of docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. We have spent many thousands of dollars and countless months building a club that continues to attract new members with the attrition of our original members. It is likely the peace and beauty of this location that remains our strongest marketing tool: remote and yet only 30 minutes - 2 hours travel away from our local marinas.</p> <p>Please decline Burnco's request for a mining permit for McNab Creek.</p>	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
440	123 - 2	Neil McClelland	Nanaimo, BC	<p>I live in Nanaimo but visit our Ekins Pt outstation as often as I can. My specific concerns about a mine in this location are:</p>	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
441	123 - 3	Neil McClelland	Nanaimo, BC	<p>Noise, lights at night and waves. In short, everything that we enjoy at our outstation, which is now at risk.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS.</p> <p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p>

442	123 - 4	Neil McClelland	Nanaimo, BC	<p>The economic gain belongs solely to Burnco, while it destroys our peace and enjoyment of this spectacular vista: a dust/smoke/lights-at-night eyesore that will be visible greatly reduces our ability to attract new members. This project brings no economic or social advantage to our club, nor to anyone else trying to enjoy the natural beauty of our west coast. This project disregards the benefits to the province of having such a truly magnificent area like Howe Sound in our own back yard.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
443	123 - 5	Neil McClelland	Nanaimo, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. 444	123 - 6	Neil McClelland	Nanaimo, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
445	123 - 7	Neil McClelland	Nanaimo, BC	<p>Our members use the foreshore area/estuary (the sole estuary in the area) of McNabb Creek for recreation of fishing, prawning and crabbing. Not only will a mine and it's accompanying marine traffic greatly diminish the marine life populations that support fishing, the risk to our small dingies/boats from the increased tug/barge and water taxi traffic exists as another consideration that could diminish our interest in returning to this area.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

448	123 - 10	Neil McClelland	Nanaimo, BC	<p>We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats that are moored without adequately-placed protection from their fenders are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats.</p> <p>We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis.</p> <p>The wakes of commercial vessels listed above also present risks to kayakers, paddleboarders, swimmers, water-skiers. Many of our children have learned to swim at this dock.</p> <p>We feel that our safety on the water could be compromised. There have been an increased number of paddle boarders this past summer..Our family have enjoyed the safety of peaceful waters this past summer.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
449	123 - 11	Neil McClelland	Nanaimo, BC	<p>In 2012, we determined that Thunderbird Yacht Club spent \$161,054.00 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. This amount can only have increased since that time. If our membership or our interest in Howe Sound is diminished, the business that we bring to the Sunshine Coast could be similarly lessened.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
450	123 - 12	Neil McClelland	Nanaimo, BC	<p>Calgary-based Burnco Rock Products donated \$34,000 to the Liberals, bringing their eight year running total to \$219,700. Writes Dermod Travis, executive director of Integrity BC, 23 April 2014. This amount is considered by the author to be 'outlandish'. At this time \$286,700.00 has been donated by Burnco to the BC Liberal Government. One can only wonder why Burnco would donate such a large amount to the current government.</p>	<p>Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

451	123 - 13	Neil McClelland	Nanaimo, BC	<p>The McNab Creek estuary remains both rare and productive. It is a living breathing science project directly opposite our docks and we use this remote and pristine area to educate our children/grandchildren the value of conservation for their children's enjoyment.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
452	123 - 14	Neil McClelland	Nanaimo, BC	<p>Our member's grandchildren saw whales /dolphins/deer/otters this past summer in Howe Sound opposite McNabb Creek. . This experience outside of their usual city life was priceless and unforgettable. What is the dollar value placed on a child (or any adult for that matter) seeing a whale for the first time?</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
453	123 - 15	Neil McClelland	Nanaimo, BC	<p>My family and I watched meteor showers this summer from our boat in Howe Sound: it was a priceless experience. Lights from a gravel mine will almost certainly diminish the night sky. We value this remote area precisely for such advantages as an unobstructed night sky.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

454	123 - 16	Neil McClelland	Nanaimo, BC	<p>Burnco executives will not commit to complete this project in 16 years: they have been quoted as intending to maximizing this resource. It remains uncertain if Burnco will wish to extend beyond 16 years. At this time, we are unaware of a commitment from Burnco to provide a public forum with which we might monitor and assess compliance to Burnco's original plan.</p>	<p>The Proposed Project is to extract approximately 20 million tonnes of sand and gravel over the 16 year life of the Proposed Project. This will be reflected in an approved EA certificate and mine plan.</p> <p>BURNCO will establish a Community Advisory Group (CAG) to provide a forum for interested stakeholders to review, discuss and make recommendations. CAG terms of reference and meeting minutes will be made available online.</p>
455	123 - 17	Neil McClelland	Nanaimo, BC	<p>Burnco's reputation as a neighbour in Alberta is known to be adversarial. Citizens of Cougar Ridge have learned, following 10 years of Burnco as their neighbour, that Burnco does not adhere to its original commitment as they fully understand the limited power within local governments to enforce them to comply.</p>	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors' environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
456	123 - 18	Neil McClelland	Nanaimo, BC	<p>Again we encourage you to decline Burnco's application: their profit isn't worth the ill will that this project brings to Howe Sound.</p> <p>Thank you for your serious consideration to the concerns of our members.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
457	124 - 1	Pierre Blais	Vancouver, BC	<p>It should move forward, we need to keep our economy growing...I fully support this project.</p>	<p>Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

458	125 - 1	David Sverre	Gibsons, BC	I am an civil engineer and having read the project documentation I believe this is a very sensible and low impact location and approach to obtain aggregates.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
459	126 - 1	Personal Information Withheld	Mission, BC	I support this project. We need the good paying jobs and the tax revenue.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
460	127 - 1	Personal Information Withheld	Langley, BC	Having reviewed the work and effort done to make this an environmentally responsible project I am in favor of proceeding with this proposal by Burnco. This project will benefit those who live in BC	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
461	128 - 1	Barry Johnson	Mission, BC	I believe we must have it to keep up to the growing demand of our economy to sub stain jobs and demands to all of Canada	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
462	129 - 1	Chris Dietrich	North Vancouver, BC	I just graduated from high school and I feel like my childhood playground (the Howe Sound area) is at risk of being permanently damaged. This is a place that should be meant for rest and relaxation, not for industrialization.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
463	129 - 2	Chris Dietrich	North Vancouver, BC	The sound of crushing rock does not fit in with this beautiful spot.	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRDR noise bylaw was considered as part of the assessment.
464	129 - 3	Chris Dietrich	North Vancouver, BC	Please consider the negative impact this gravel mine will have on the environment.	The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.  Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.
465	130 - 1	Richard Boates	Delta, BC	The construction industry is one of the pillars of the BC economy and employs many thousands of British Columbians. it is also critical to the development of our province. A secure supply of aggregates is critical to the construction industry and will contribute to the prosperity of our province. This aggregate mine is responsible development and must be allowed to proceed for the good of all British Columbians.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
466	131 - 1	Ron Slade	Gabriola Island, BC	I support this project.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

467	132 - 1	Personal Information Withheld	North Vancouver, BC	Gambier is a beautiful island where lots of family's and friends go to vacation and enjoy the beautiful place. My friends have a cabin over there that they always invite people up and everyone who goes always comes home saying how much fun it was and how beautiful gambier truly is.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
468	132 - 2	Personal Information Withheld	North Vancouver, BC	Why ruin all of this for a gravel pit that will only create 12 jobs? Don't take away this beautiful place full of memories and homes for a mine project.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
469	133 - 1	Ava	North Vancouver, BC	Please do not destroy Howe Sound with a gravel pit.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
470	134 - 1	Sandy McNamee	White Rock, BC	Howe Sound is the environmental jewel in the Vancouver crown. It is currently recovering from industrial use and is no place an aggregate mine.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

471	134 - 2	Sandy McNamee	White Rock, BC	I have a degree in Biology and I know the teeming life that abounds and is supported by estuaries. Humans look at intertidal areas filled with grasses and mud and algae and imagine no importance. Mother Nature thrives in these areas.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
472	134 - 3	Sandy McNamee	White Rock, BC	The newly introduced elk, the returning marine mammals, and hundreds of birds and fish and amphibians rely on this area to remain as it is.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
473	134 - 4	Sandy McNamee	White Rock, BC	At some point people must realize that making money is not the most important thing on this earth, and to impact the earth so fully all in the name of corporate profits is beyond wrong and unreasonable. It is insane and ignorant.	<p>The Proposed Project will provide sand and gravel that will be used to meet the growing demands of the BC marketplace.</p> <p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>

474	134 - 5	Sandy McNamee	White Rock, BC	McNab Creek is a rare a beautiful part of Howe Sound and no place for a mine. Squamish is an up and coming recreational area for people to come and explore and enjoy the incredible outdoor experiences of Howe Sound. So not only is mother nature at risk, tourism and enjoyment by residents is at risk too.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
475	134 - 6	Sandy McNamee	White Rock, BC	One last thing is the huge impact on the creek itself. It is a fish bearing creek, that would suffer irreparable harm.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
476	135 - 1	Personal Information Withheld	North Vancouver, BC	Similar to letters sent to you and the BCEAO a few years ago we will continue to question the need for another large scale industrial mine within one of the magical areas of Howe Sound.	<p>The Proposed Project will provide sand and gravel that will be used to meet the growing demands of the BC marketplace.</p> <p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>
477	135 - 2	Personal Information Withheld	North Vancouver, BC	This is a place where silence and beauty is so spectacular that you can read a book while hearing only the occasional splash of a seal, the flapping of wings from a blue heron, and the crunching teeth a sea otter while eating his morning fish. This is all while mountains tower straight out of the ocean 3,000 - 5,000 feet in a 360 degree view. Kids paddle board in notoriously calm waters. There is recreational crabbing, prawning, fishing, and natural oysters beds, among many other forms of wildlife. You may think you are in Alaska but you are only 45 minutes from downtown Vancouver.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. 480	135 - 5	Personal Information Withheld	North Vancouver, BC	<p>It seems no so long ago that the Howe Sound was so polluted that no one was even interested in enjoying the many wonders of this area. This is not the only area that has had a eye opener. Consider, the dump within the Whistler town center 40 years ago before it was really discovered. The logging dumps in Tofino and clear cutting in Clayoquot Sound, prior to it becoming a UNESCO biosphere or the recent success of the Sea to Sky Gondola in a town that has emerged from a rough industrial history. Even the shores of Vancouver were once filled with heavy industry and is now one of the most livable metropolitan areas in Canada. The beauty of McNab Valley is that it is slightly hard to get to without a boat. However, all the above examples were also once hard to get to. Access to this area will also change someday soon and the monetary value in marine resources and potential tourism dollars, will greatly exceed that of an aggregate mine. The immense benefits this area offers with respect to both natural marine and terrestrial ecosystems is truly spectacular and I'm very disappointed to see new industrial applications being considered for this region. I understand that gravel is an important part of our lives but a mine of this nature would surely be better suited in other locations with a lower impact to both the ecosystem and tourism economy.</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
481	136 - 1	Personal Information Withheld	North Vancouver, BC	<p>Over the past few years there has been so much opposition for this mine. With all this opposition why would it even be considered?? Below is a snapshot of who I have witnesses as being in disagreement:</p> <ul style="list-style-type: none"> <li>• The Suzuki Foundation</li> <li>• Environmental consulting firms</li> <li>• GeoTech firms</li> <li>• Marine biologists</li> <li>• BC Stream Keepers</li> <li>• Squamish First Nations</li> <li>• Tourism operators</li> <li>• Yacht Clubs and out-stations</li> <li>• Local municipalities and residents</li> <li>• Department of Fisheries</li> <li>• Local kids camps</li> <li>• Local recreation seekers</li> <li>• Local property owners</li> <li>• International tourists</li> </ul>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

482	136 - 2	Personal Information Withheld	North Vancouver, BC	Please recognize the economic, sociological and ecological value of this area and that it would do the province much more benefit to be left as a magical recreational area or designated as a National Park and or a UNESCO Biosphere	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
483	137 - 1	Personal Information Withheld	North Vancouver, BC	I understand that gravel is an important part of our lives but a mine of this nature would surely be better suited in other locations with a lower impact to both the ecosystem and tourism economy. Other areas of concern are:	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
484	137 - 2	Personal Information Withheld	North Vancouver, BC	<ul style="list-style-type: none"> <li>Apparently, there is no plan to have any monitoring mechanism in place from the noise from rock crushers reverberating off the mountains surrounding the site and the ocean.</li> </ul>	Noise monitoring locations will be included as part of the Noise Management Plan. Stations will be located to monitor noise levels at the McNab Strata and at Ekins Point on Gambier Island.

494	137 - 12	Personal Information Withheld	North Vancouver, BC	<ul style="list-style-type: none"> <li>BURNCO has donated more than \$200,000 to Liberals and NDP in BC – I wonder why. They are an Alberta based firm.</li> </ul>	<p>BURNCO is a 104-year old family-owned Canadian company with operations in British Columbia, Alberta, Saskatchewan and Texas.</p> <p>BURNCO has over 1,150 employees (180 in BC) and is Canada's largest independent ready mix concrete and aggregate company.</p> <p>BURNCO's BC operations currently transport sand and gravel by barge from Treat Creek (east of Powell River) and as far away as Port McNeil on northern Vancouver Island, to existing facilities along the Fraser River in Burnaby and Langley.</p>
495	138 - 1	Ruth Simons	Howe Sound, BC	<p>I have been trying to access the website for the Canadian Environmental Assessment Agency Burnco project information all day (Sunday 18th September) with no success. Various approaches to get to the information are unsuccessful, it appears the system is hung up or just not responding.</p> <p>The comment period should be extended for those with limited time available, that have limited time to research and review the information.</p> <p>The storyboards summarizing the project that were at the Burnco public information sessions are not posted to the Burnco website as promised. I was discouraged by Burnco staff from taking photos at the public information sessions with the understanding they would be available immediately after Sep 14th. Again, for those not able to make the open house sessions, this information should be transparent and available during the public comment period, especially during the weekends when people are more likely to have time to comment. Having read the story boards some of the comments are related to that content.</p> <p>The public comment period ends September 28th, this should be extended to October 3rd to allow for an extra weekend to allow people the time to review all the information.</p>	<p>The formal Public Comment Period was extended by 5 days (to October 3, 2016) to accommodate those who had difficulties accessing the CEAA online registry. The complete EAC Application/EIS is also available through the BCEAO electronic Project Information Centre (e-PIC, 222.bceao.gov.bc.ca) and BURNCO's Project site (www.burncohowesound.com).</p>
496	139 - 1	Personal Information Withheld	Edmonton, AB	I 100% support this project.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

497	140 - 1	Tom McConnell	Vancouver, BC	<p>My name is [redacted] past Strata chair of McNab Creek Estates. Over the past 20 years we have, as you are well aware, AJB and Columbia investment both try and apply for extraction of the Gravel in/on and from the Estuary. On all occasions DFO and the other powers, declined the applications.</p> <p>Burnco bought this property with full awareness of the previous concerns that have not changed.</p> <p>When DFO did not support Burnco, as I understand, they took DFO to court pushing for Environmental Assessment.</p> <p>Now here we are again, same concerns .</p>	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO's involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>
498	140 - 2	Tom McConnell	Vancouver, BC	<p>Noise of rocks dropping into a barge day in and day out echoing on top bellow of the Howe Sound water and in the McNab Valley bowl . - fish disturbance .</p> <p>I've been an avid fisherman of all species as well as the enjoying the abundant prawning and crabbing of the area for those 20 years enjoying the peace and quiet enjoyment . The sealife of any and all types will be negatively effected by the noise.</p> <p>Peace and quiet enjoyment as we know it, will be gone.</p> <p>Sound over water is amplified so much as we are all aware.</p> <p>I'm asking that our peace enjoyment be protected for our kids and there kids</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>

501	141 - 2	Neil McClelland	Vancouver, BC	<p>Sound of Gravel going into a huge tin can. ( Further Studies need to be done to understand this Pollution .) - The effects of noise pollution are not as easy to notice as are the other more obvious and visible pollutants like oil spills and marine debris. To what extent these manmade sounds are negatively impacting the oceans is not fully known. The current high noise pollution levels are so recent that many individual marine mammals and fish alive today were born before the problem even arose. The long term impact is simply not yet known.</p> <p>Fish disturbance under water due to noise - The decibel scale for measuring sound follows a logarithmic scale and the actual power of sound increases very fast. A ten decibel increase in sound represents a ten times increase in volume while a 20 decibel increase represents a 100 times increase in volume; a thirty decibel increase in sound represents a 1000 times increase in volume. Sound also travels faster and further in water than in air. High intensity sound in the oceans may not dissipate for thousands of miles. Humpback whales, pictured below, are particularly sensitive to oceanic noise pollution.</p> <p>Salmon live in the estuary and McNab creek for years before there migration .What is the long term impact of these fish There is grave concern that proliferation of these noise sources poses a significant threat to marine mammals, fish and other ocean wildlife. Scientists agree, and a growing body of research confirms, that the</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. 503	141 - 4	Neil McClelland	Vancouver, BC	Pits and quarries disrupt the existing movement of surface water and groundwater; they interrupt natural water recharge and can lead to reduced quantity and quality of drinking water for residents and wildlife near or downstream from a quarry site.	<p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS.</p> <p>Positive effects on the flows in McNab Creek are predicted to result from reducing the rate of flow loss to the groundwater system. Increased baseflows are also predicted in the foreshore minor streams. Water quality predictions are below applicable Water Quality Guidelines.</p> <p>Groundwater flow is predicted to be less than the baseline during the first 15 years of operation. This loss represents a gain in flow in McNab Creek. Groundwater flow at closure will be controlled through adaptive management of the overflow structure. No water quality parameters are predicted to exceed BCWQG or CCME Guidelines.</p>
504	141 - 5	Neil McClelland	Vancouver, BC	Pits and quarries disrupt the existing movement of surface water and groundwater; they interrupt natural water recharge and can lead to reduced quantity and quality of drinking water for residents and wildlife near or downstream from a quarry site.	<p>Information regarding geochemical testing for ML-ARD potential is presented in Section 5.5.5.2.4 of the EAC Application/EIS. The results of geochemical testing are presenting in Appendix 5.6-C.</p> <p>Yes, geochemical testing was conducted on 3 composite samples collected from two test pits at the Project site. The geochemical testing program included acid base accounting, whole rock and trace metal analysis, and sequential leach tests. The objective of acid base accounting was to determine the material's potential to generate acidity. The acid base accounting results confirmed that the materials contained no sulphide minerals; oxidation of sulphide minerals is the primary source of long-term acid generation potential. Therefore, the materials are considered to have a low potential for long-term acid generation.</p> <p>The results of whole rock and trace metal analysis were used to identify parameters that may require further consideration in the context of metal leaching potential. Sequential leach testing was used to evaluate the metal leaching potential of the materials. Sequential leach testing is appropriate for evaluating the potential for metal leaching in the absence of reactive sulphide minerals, therefore this test method was used in place of the humidity cell test method (HCT). The results of the sequential leach tests were screened in the context of the BCWQ and CCME Guidelines for the protection of Freshwater Aquatic Life to identify parameters of potential environmental concern. The results of the sequential leach tests were used to develop inputs to the water quality predictions for the Proposed Project.</p>

505	141 - 6	Neil McClelland	Vancouver, BC	Tug and Barge Wake disrupting local communities. Hundreds of boaters over the year enjoying McNab beach beside creek.	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
506	141 - 7	Neil McClelland	Vancouver, BC	In closing - Rivers flood and shift their courses from time to time, resulting in natural cycles of erosion and deposition of sand and gravel. The extraction of sand and gravel from rivers, streams, floodplains and channels conflict with the functionality of river ecosystems.	An avulsion study of McNab Creek indicated the potential for stream avulsion to affect the Project Area was low and could be further mitigated by construction of a flood protection dyke, which has been incorporated into the project design.
507	142 - 1	Tom McConnell	Vancouver, BC	50 lb salmon caught at McNab creek . We're have all the Salmon gone. We need to protect our environment for our future generations. Howe sound is finally starting to show signs of recovery. Mining has damaged the Howe sound enough.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

508	142 - 2	Tom McConnell	Vancouver, BC	Please leave the estuary alone .	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
509	142 - 3	Tom McConnell	Vancouver, BC	We as humans can study and study but the reality of the situation damage today caused by this potential project will take another 1/2 a generation to repair.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. 516	145 - 5	Victoria Smith	Gambier Island, BC	Noise from gravel crushing affecting wild life. Disruption to the elk, an at risk species.	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>
517	145 - 6	Victoria Smith	Gambier Island, BC	Lighting during construction and operation causing further disruption to life in the area.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

521	145 - 10	Victoria Smith	Gambier Island, BC	Howe Sound has been returning to its natural beauty, creating tourism, recreational opportunities and vibrant communities. We have seen the return of dolphins and whales, indicators of ecological recovery.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
522	145 - 11	Victoria Smith	Gambier Island, BC	The Burnco Aggregate Project does not fit our values. Please say no to this project and preserve the delicate ecosystem of Howe Sound and its diverse local economies.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
523	146 - 1	Ruth Simons	Howe Sound, BC	I am a former member of the Sea to Sky Clean Air Society. If I read the assessment correctly, very little onsite monitoring of baseline conditions has been conducted on site and collection of dust sample was done in the month of November. November would not be representative of the dust that could occur in the dry summer months. Why November?	The ambient air particulate monitoring data collected at the Proposed Project site during the month of November was not used to characterize the existing air quality. Instead, background air quality concentrations for TSP, PM10, PM2.5, NO2 and SO2 were characterized using data from existing air quality monitoring networks operated by the BC Ministry of Environment (BC MoE). Background air quality concentrations were established using methods consistent with the BC Air Quality Dispersion Modelling Guideline current at the time of assessment (BC MoE 2008). The method used to determine background concentrations was approved by the BC MoE within the detailed model plan, included in the EAC Application/EIS as Appendix 5.7-E.  The most recent available data from the BC MoE at the time of the assessment was used to establish background conditions: - For the Langdale Elementary station PM10, NO2 and SO2 data were available between January 2010 and December 2013 and data for PM2.5 were available between December 2011 and December 2013. - For the Squamish station PM10 data were only available between January 2010 and January 2011, while PM2.5 data were available between February 2011 and December 2013. Data for NO2 and SO2 were available between January 2010 and December 2013. - For the Horseshoe Bay station PM2.5 data were available between January 2011 and December.  Similarly, the total dustfall results collected at the Proposed Project site were not used to support the application. The metals composition within the dustfall sample was used to support the human health assessment.

524	146 - 2	Ruth Simons	Howe Sound, BC	The air quality data is based on 2013 information. Monitoring equipment at the stations has been upgraded. This upgraded equipment would likely affect the baseline data of the PM2.5 readings. The purpose of upgrading the equipment was to enable more accurate readings of air quality, why is it not being used in this assessment?	<p>During the 2013 monitoring period both the Squamish and Langdale Elementary air quality stations were transitioning their PM2.5 monitor types from TEOMs to BAMs; both TEOM and BAM data were available. Analysis of the data indicated that the TEOM generally reported lower PM2.5 concentrations than the BAM. The assessment used the PM2.5 data from the BAM at the Squamish and Langdale monitoring locations to characterize background concentrations since it was the newer instrument (upgrade) at the location, and also generally provided the more conservative (higher) average background concentrations.</p> <p>The most recent available data from the BC MoE at the time of the assessment was used to establish background conditions:</p> <ul style="list-style-type: none"> <li>- For the Langdale Elementary station PM10, NO2 and SO2 data were available between January 2010 and December 2013 and data for PM2.5 were available between December 2011 and December 2013.</li> <li>- For the Squamish station PM10 data were only available between January 2010 and January 2011, while PM2.5 data were available between February 2011 and December 2013. Data for NO2 and SO2 were available between January 2010 and December 2013.</li> <li>- For the Horseshoe Bay station PM2.5 data were available between January 2011 and December 2013.</li> </ul> <p>Ambient air quality conditions at Langdale Elementary, Squamish and Horseshoe Bay would be influenced by localized urban, commercial and industrial emission sources; emission sources not found in close proximity to the Proposed Project. Therefore, establishing background conditions using data from Langdale Elementary, Squamish and Horseshoe Bay is expected to result in conservatively higher than actual conditions at the Proposed Project site.</p>
525	146 - 3	Ruth Simons	Howe Sound, BC	Logging trucks are often travelling through the project area and kick up considerable dust on the gravel road. There is intended to be an increase in trucks with the transportation of the silt collected by truck from the processing area, have the cumulative impacts been considered in the overall air quality predictions?	<p>Proposed Project vehicles will transport the fine (e.g., silt cakes) from the Processing Area to the Fines Storage Area at a rate of approximately one trip per day. The vehicles carrying the fines will be travelling along the current north south road within the Proposed Project Area/fenceline. Mitigation measures to reduce unpaved road dust from Proposed Project roads will include, watering of unpaved roads and restricting speed limits.</p> <p>The generation of dust along roads due to construction vehicles were included in the dispersion modelling, and were assumed operate all year round even though the rate of use would be limited to will 30 days per year, 14 hours per day. The results of the dispersion modelling are expected to provide conservative predictions related to dust (i.e. higher offsite concentrations) generated by construction vehicles.</p> <p>BURNCO has also committed to continuous air quality monitoring within Section 5.7.5.3 of the EAC Application/EIS.</p>

526	146 - 4	Ruth Simons	Howe Sound, BC	<p>Marine Resources: I recall commenting during the draft phase about the concern of particulates escaping during barge loading and accumulating over the life of the project over the estuary and affecting the productive marine life. Air Quality section illustration 5.7-4 indicates coarse particulate matter over the estuary. There is shellfish in the project area, samples of crab were collected for the human health study and we have underwater film footage of scallops, crab and prawns not far from the barge loading area. The Consultant for Marine Resources explained there would be no value in a study due to material being "wet" and covered conveyors being used. Once the gravel is crushed and stored, what guaranteed it is still dust free when it is being loaded onto the barge during the hottest and driest time of the year with windy conditions? There doesn't seem to be a design for keeping the aggregate wet during barge loading.</p>	<p>As detailed in Section 5.7.5.3.2 of the application, a number of mitigation measures for fugitive barge emissions will be in place and will include:</p> <ul style="list-style-type: none"> <li>-Barges will only be travelling loaded in one direction.</li> <li>-The barges will have 2.74 m box walls which will act as partial windscreens.</li> <li>-The loaded aggregate material will be wet (stockpiles will be watered, and material will be moved to barge via covered and bottom feeding conveyors). The frequency of wetting is expected to be increased depending on weather conditions (e.g., during periods of hot, dry weather).</li> <li>-Five of the seven aggregate types will have material silt content less than 1.5%. <ul style="list-style-type: none"> <li>-material silt content of 14 mm concrete stone, 10 mm concrete stone and 20 mm concrete stone will be 0%.</li> <li>-material silt content of 25 mm crushed rock will be 1%.</li> <li>- material silt content of washed sand (5mm) will be 1.5%.</li> </ul> </li> </ul> <p>BURNCO has also committed to developing an Air Quality and Dust Control Management Plan. This plan will outline activities, triggers and mitigation measures that will be implemented based on changing site conditions (i.e. if a trigger is reached, such as a specific wind speed, mitigation measures will be implemented to reduce the effect; such as postponing barge loading until the wind speeds have dropped). These mitigation measures will be detailed in the Air Quality and Dust Control Management Plan which is outlined in Section 17.0 of the EAC Application/EIS.</p>
527	146 - 5	Ruth Simons	Howe Sound, BC	<p>What about the cumulative impacts of increased trucking activity on the road on the fish in Harlequin Creek that runs beside the road?</p>	<p>Changes to Surface Water Quality - Suspended Sediments (including the contribution of dust from roads) was assessed as part of the Fisheries and Freshwater Habitat assessment provided in Section 5.1.5.2.1.1 of the EAC Application/EIS. Mitigation measures to reduce this effect are considered sufficient to limit the potential effect to freshwater fish VCs. Such mitigation measures include, watering of unpaved roads and restricted speed limits within the Proposed Project Area to reduce particulate emissions. These mitigation measures will be detailed in the Air Quality and Dust Control Management Plan which is outlined in Section 17.0 of the EAC Application/EIS. Addition erosion control measures are provided in Appendix 3 (Sediment and Erosion Control Plan) and the Fisheries Habitat Protection and Mitigation Plan outlined in Section 17.0 of the EAC Application/EIS.</p>
528	147 - 1	Darci Rosalie	Vancouver, BC	<p>As a property owner in Howe Sound I am opposed to the Burnco mining project.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

529	147 - 2	Darci Rosalie	Vancouver, BC	<p>McNab Creek Estuary provides nutrient rich stream waters that fertilize the ocean and create rich and productive ecologies. It is a delicate ecosystem still recovering from past logging. Approval of the Burnco proposal will return the area to an industrial zone. Despite Burnco's proposed mitigation measures, damage to this recovering ecosystem will be unavoidable.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
530	147 - 3	Darci Rosalie	Vancouver, BC	<p>Environmental Concerns: · Damage to salmon, herring and other marine life</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

531	147 - 4	Darci Rosalie	Vancouver, BC	Noise from gravel crushing affecting wild life	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>
532	147 - 5	Darci Rosalie	Vancouver, BC	Disruption to the elk, an at risk species	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

533	147 - 6	Darci Rosalie	Vancouver, BC	· Lighting during construction and operation causing further disruption to life in the area	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
534	147 - 7	Darci Rosalie	Vancouver, BC	· Compromised air quality due to emissions	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>

535	147 - 8	Darci Rosalie	Vancouver, BC	Increased barge traffic in Howe Sound	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
536	147 - 9	Darci Rosalie	Vancouver, BC	Overall damage to the estuary and surrounding area that comes with industrial development	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
537	147 - 10	Darci Rosalie	Vancouver, BC	Howe Sound has been returning to its natural beauty, creating tourism, recreational opportunities and vibrant communities. We have seen the return of dolphins and whales, indicators of ecological recovery.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. 543	149 - 1	Ruth Simons	Howe Sound, BC	<p>Cumulative Effects - The Box Canyon Run of the River project is upstream from the Burnco project and within the Local Study Area. The concern is that residual effects of the Box Canyon project have not been appropriately assessed. According to Golder's Environmental assessment report many of the studies used as baseline are several years old, and the Box Canyon project was not anticipated to be starting until 2017:</p> <p>Projects and Activities considered in the Cumulative Effects: Volume 2 - 4-37 Box Canyon Run of the River Project states: "Planned future run-of-river hydroelectric project with a capacity of 15 MW and proposed start of 2017". "Habitat compensation is planned for Box Canyon Creek (possibly Marty and Cascara) in the form of rearing habitat for juvenile Coho salmon and cutthroat trout".</p> <p>However, this project began operation earlier this year: July 12, 2016 Clean-Tech Canada online publication: VANCOUVER—Elemental Energy Inc. has announced it has brought its 16 megawatt run-of-river Box Canyon hydroelectric project northeast of Vancouver fully online."</p>	<p>Potential cumulative effects of the Proposed Project and other certain and reasonably foreseeable projects and activities have been assessed for all non-negligible residual effects (i.e., for all potential effects of the Proposed Project determined to be significant or not significant following the application of proposed mitigation) in accordance with an assessment methodology that reflects accepted EA practice in BC and Canada. The significance of potential cumulative residual effects was characterized for the following:</p> <ul style="list-style-type: none"> <li>- Marine mammals – behavioural disturbance</li> <li>- Amphibian species at risk – barriers to movement, change in mortality, habitat loss</li> <li>- Roosevelt elk – barriers to movement, change in mortality, habitat loss</li> <li>- Grizzly bear – change in mortality, habitat loss</li> <li>- Environmentally sensitive ecosystems – loss of extent</li> <li>- Ecosystems at risk – loss of extent</li> <li>- Air quality indicators – increase in PM2.5 (24 hr, annual), PM10 (24 hr), TSP (24 hr, annual)</li> <li>- Real estate – change in real estate value</li> <li>- Marine navigation – interference with navigation use and navigability due to Project-related vessel traffic</li> <li>- Harvesting fish and wildlife – change in environmental setting</li> <li>- Recreation and tourism – change in environmental setting</li> <li>- Visual quality – change in visual quality</li> <li>- Heritage resources – changes to heritage resource integrity, context and accessibility</li> <li>- People – Human health (air quality and particulate matter).</li> </ul> <p>All potential cumulative residual effects were determined to be negligible or not significant except net effects to grizzly bear; cumulative residual effects to the threatened Squamish-Lillooet Grizzly Bear Population Unit were determined to be significant due in large part to vehicle collisions that might result from the development of new logging roads. Grizzly bear have not been observed within the Proposed Project area and the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
544	149 - 2	Ruth Simons	Howe Sound, BC	<p>This project is downstream from the Box Canyon project and in the local study area. It does have environmental impacts, in particular noise. The effects on wildlife and fish resulting from and impacts on the residents at McNab must be taken into account.</p>	<p>Cumulative effects due to noise were not assessed because the significance of the noise VC was Negligible, Not Significant. The cumulative contribution of noise from the Box Canyon project is expected to be minimal, based on previous assessments of run-of-river projects (e.g. Narrows Inlet Hydro Project, 2012).</p>

545	149 - 3	Ruth Simons	Howe Sound, BC	<p>From the Canadian Environment Assessment website Box Canyon project archived information it stated this project would impact fish but escaped an assessment when changes to the fisheries act came into effect:</p> <p>“ flow changes will be experienced within those tributary creeks as well as along approximately 5.7 kilometres of McNab Creek between the confluence with Cascara at the upstream end and Box Canyon Creek at the downstream end. In addition flow ramping effects will likely have an effect to the mouth of McNab Creek. All diverted water is proposed to be delivered to a single powerhouse located on the banks of McNab Creek, approximately one kilometre (1 km) upstream of the confluence of Box Canyon Creek.</p> <p>..... In particular, Fisheries and Oceans Canada will pursue the assessment of impacts of the construction and operation of the proposed hydroelectric power facility on fish and fish habitat, and determine the required mitigation for impacts and compensation for residual impacts. Further details or changes to the scope will be posted if other Federal agencies and departments are required to provide input or issue an approval for any of the project components.”</p> <p>On July 6, 2012, the new Canadian Environmental Assessment Act, 2012 came into force which replaced the former Canadian Environmental Assessment Act. As a result, there is no longer a requirement to complete the environmental assessment of this</p>	<p>Cumulative effects to fisheries and freshwater were not assessed because the significance of the VCs was Negligible, Not Significant following the implementation of proposed mitigation (esp., Offset habitat).</p>

546	150 - 1	John Heilig	Squamish, BC	My family and I are members of the Thunderbird Yacht Club as well as the Squamish Yacht Club and use the area around the proposed Burnco gravel pit extensively. We use the Thunderbird outstation directly across from the proposed gravel pit and also use the entire waterway for a variety of marine activities. This area consistently has the warmest and calmest waters in Howe Sound making it ideal for recreational boating, waterskiing, wakeboarding, swimming, canoeing, kayaking and using stand up paddleboards. It is a highly valued recreational asset and one that will continue to grow in popularity. Not only will an additional industrial operation negatively impact the mostly natural setting in the area but it will also have negative impacts on recreational use and enjoyment of the area. Ideally another site could be chosen for this type of operation. I attended the open house in Squamish to get a clearer picture of the project and its impact. I came away from the open house believing that Burnco is doing what they can to minimize impacts.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
547	150 - 2	John Heilig	Squamish, BC	However, I have a couple of areas of concern that I would like addressed: 1) Hours of operation a. Burnco insisted that they will operate Mon-Fri daylight hours only This would be a good step as most recreational usage in this area occurs on weekends. Can you confirm that Burnco will not be permitted to work on weekends? If they can get out of this commitment to daylight/weekday only operation the impact of the project will be greatly increased. Can you also confirm the maximum number of hours per day that the plant would be permitted to operate. I believe no longer than a 10 hour day should be permitted although daylight hours extend beyond 10 hours/day in the summer peak recreational use period.	The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCRD noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.  Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.
548	150 - 3	John Heilig	Squamish, BC	2) Noise Impacts a. Burnco insists that the increase in sound levels will not be apparent or significant at Ekins Point where the Thunderbird Yacht Club is located. What is our re-course if this is not the case? Can we ask them to shut down their operation if there is an increase in sound levels beyond what they assured us would be the case? Can you confirm that corrective actions will be required if the noise impacts are greater than anticipated and that the plant will not be permitted to operate until appropriate mitigation is completed?	Noise monitoring locations will be included as part of the Noise Management Plan. Stations will be located to monitor noise levels at the McNab Strata and at Ekins Point on Gambier Island.

549	150 - 4	John Heilig	Squamish, BC	<p>2) Noise Impacts</p> <p>a. Burnco insists that the increase in sound levels will not be apparent or significant at Ekins Point where the Thunderbird Yacht Club is located.</p> <p>What is our re-course if this is not the case? Can we ask them to shut down their operation if there is an increase in sound levels beyond what they assured us would be the case? Can you confirm that corrective actions will be required if the noise impacts are greater than anticipated and that the plant will not be permitted to operate until appropriate mitigation is completed?</p>	<p>The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Considering these factors, the modelled Project contributions to noise levels at NR4 (Eakins Point, inside the LSA and across the water from the Project) were below baseline and resulted in Negligible-Not Significant effects. Therefore the LSA will not be expanded.</p> <p>A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.</p>
550	150 - 5	John Heilig	Squamish, BC	<p>3) Light impacts</p> <p>a. According to the operating plan there will be no night time operation.</p> <p>This would be a positive outcome that would not contribute to the existing lighting impacts from the Port Mellon facilities. I would like Burnco to go further and confirm that security lighting and any other required lighting on the site be minimized, be ground facing and targeted. Ideally all lighting requirements can be met by lighting inside structures and with no impact on the shoreline. Docking facilities should be lit according to the requirements for safety only. I would like to see a more highly developed lighting plan that can be held up to scrutiny.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
551	150 - 6	John Heilig	Squamish, BC	<p>Having visited the open house and discussed many aspects of the project with Burnco staff and contractors these are my primary concerns related to the project. The operational plan as described seems appropriate but I would like confirmation that the above operational plans and schedules must be adhered to or the plant will not be permitted to operate. If the plant cannot operate within the operational corridor they have described in the public meetings than it must be shut down. Please insure that this is the case.</p>	<p>The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCRD noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.</p> <p>Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.</p>
552	150 - 7	John Heilig	Squamish, BC	<p>On a final note, has the possibility of a fixed link traversing this section of the Sunshine Coast been considered in the planning for this facility? If a fixed link follows the alignment along this section of the Sunshine Coast it would seem wise to consider what more valuable uses this estuary/beach and large upland valley might be used for eg. housing and parkland to accommodate the expanding housing needs of the lower mainland.</p>	<p>Potential cumulative effects of the Proposed Project and other certain and reasonably foreseeable projects and activities have been assessed for all non-negligible residual effects (i.e., for all potential effects of the Proposed Project determined to be significant or not significant following the application of proposed mitigation) in accordance with an assessment methodology that reflects accepted EA practice in BC and Canada. A list of past, present and reasonably foreseeable projects and activities considered is provided in Table 4-7 of the EAC Application/EIS (Part B, Section 4.5.5). A fixed link connecting the Sunshine Coast is not considered to be a reasonably foreseeable within the life of the Project.</p>

553	151 - 1	Alan Martin	North Vancouver, BC	As a recreational user of Howe Sound, and acknowledging the immense benefits this area offers with respect to both natural marine and terrestrial ecosystems, I am disappointed to see large-scale industrial applications being considered for this region. Although aggregates are an essential part of our industrial base, this form of operation would be better suited to other locations characterized by a lower risk to both the ecosystem and tourism economy.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
554	151 - 2	Alan Martin	North Vancouver, BC	As a backyard to Vancouver, and gateway to Whistler, Howe Sound represents a natural wonder, whose worth resides in its natural splendor. The wonder of this region has been exemplified by the return of sardines and anchovies, which in turn support salmon, dolphins and humpback whales, which have also been reported in increasing numbers. The monetary value in these marine resources, in terms of potential tourism dollars, will greatly exceed that of an aggregate mine.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
555	151 - 3	Alan Martin	North Vancouver, BC	The monetary value in these marine resources, in terms of potential tourism dollars, will greatly exceed that of an aggregate mine. Please consider these comments and those by countless others in your decision making process.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
556	151 - 4	Alan Martin	North Vancouver, BC	Please consider these comments and those by countless others in your decision making process.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

557	152 - 1	Personal Information Withheld	Nanaimo, BC	<p>I'm writing to voice my opposition to a large scale gravel mine that Burnco Rock Products Ltd. proposes for McNab Creek on the Sunshine Coast in Howe Sound. Thunderbird Yacht Club's sole set of docks are located directly opposite the proposed site and on the north shore of Gambier Island. We are a group of 115 members and families who motor or sail to Ekins Point from marinas located all over the lower mainland. We have spent many thousands of dollars and countless months building a club that continues to attract new members with the attrition of our original members. It is likely the peace and beauty of this location that remains our strongest marketing tool: remote and yet only 30 minutes - 2 hours travel away from our local marinas.</p> <p>Please decline Burnco's request for a mining permit for McNab Creek.</p>	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
558	152 - 2	Personal Information Withheld	Nanaimo, BC	<p>I live in Nanaimo but visit our Ekins Pt outstation as often as I can. My specific concerns about a mine in this location are:</p>	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
559	152 - 3	Personal Information Withheld	Nanaimo, BC	<p>Noise, lights at night and waves. In short, everything that we enjoy at our outstation, which is now at risk.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS.</p> <p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p>

560	152 - 4	Personal Information Withheld	Nanaimo, BC	<p>The economic gain belongs solely to Burnco, while it destroys our peace and enjoyment of this spectacular vista: a dust/smoke/lights-at-night eyesore that will be visible greatly reduces our ability to attract new members. This project brings no economic or social advantage to our club, nor to anyone else trying to enjoy the natural beauty of our west coast. This project disregards the benefits to the province of having such a truly magnificent area like Howe Sound in our own back yard.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
561	152 - 5	Personal Information Withheld	Nanaimo, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>

562	152 - 6	Personal Information Withheld	Nanaimo, BC	<p>Noise reverberates off the mountains surrounding this site. Although the Burnco plan includes a berm, it remains uncertain that berms offer much mitigation to sound over water. Although Burnco's application indicates that noise would be as loud as a 'fridge running', it is precisely this type of 'white' urban noise, and machine/industrial noise that we seek out this area for it's current peace and silence. The Canadian media reported this week of the findings of industrial noise that negatively affect sea mammal populations in the St. Lawrence River. Howe Sound has recently enjoyed the return of Orcas, dolphins and an occasional grey whale. These sightings are considered priceless by our club.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
563	152 - 7	Personal Information Withheld	Nanaimo, BC	<p>Our members use the foreshore area/estuary (the sole estuary in the area) of McNabb Creek for recreation of fishing, prawning and crabbing. Not only will a mine and it's accompanying marine traffic greatly diminish the marine life populations that support fishing, the risk to our small dingies/boats from the increased tug/barge and water taxi traffic exists as another consideration that could diminish our interest in returning to this area.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

566	152 - 10	Personal Information Withheld	Nanaimo, BC	<p>We have found over our 4 decades at our docks that water taxis and commercial tug/barge traffic produce wakes large enough to cause damage both in short term and over time. Boats that are moored without adequately-placed protection from their fenders are pounded against our docks. We have experienced wakes hitting our docks from boats passing (at all speeds) that have knocked members off their feet. This has required nearly yearly repair and maintenance of the docks. Burnco's application indicates that there is no expected adverse effects from the wakes of increased traffic of water taxis and tug boats.</p> <p>We know unequivocally this statement to be untrue: not only for our docks but for all docks and the foreshore of Thornbrough and Ramilies Channel. Boat owners will be unwilling to anchor in the beach/foreshore area directly in front of the proposed site due to the risk of damage from the high wakes of the expected and frequent water taxis.</p> <p>The wakes of commercial vessels listed above also present risks to kayakers, paddleboarders, swimmers, water-skiers. Many of our children have learned to swim at this dock.</p> <p>We feel that our safety on the water could be compromised. There have been an increased number of paddle boarders this past summer..Our family have enjoyed the safety of peaceful waters this past summer.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
567	152 - 11	Personal Information Withheld	Nanaimo, BC	<p>In 2012, we determined that Thunderbird Yacht Club spent \$161,054.00 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. This amount can only have increased since that time. If our membership or our interest in Howe Sound is diminished, the business that we bring to the Sunshine Coast could be similarly lessened.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
568	152 - 12	Personal Information Withheld	Nanaimo, BC	<p>Calgary-based Burnco Rock Products donated \$34,000 to the Liberals, bringing their eight year running total to \$219,700. Writes Dermod Travis, executive director of Integrity BC, 23 April 2014. This amount is considered by the author to be 'outlandish'. At this time \$286,700.00 has been donated by Burnco to the BC Liberal Government. One can only wonder why Burnco would donate such a large amount to the current government.</p>	<p>Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

570	152 - 14	Personal Information Withheld	Nanaimo, BC	<p>Our member's grandchildren saw whales /dolphins/deer/otters this past summer in Howe Sound opposite McNabb Creek. . This experience outside of their usual city life was priceless and unforgettable. What is the dollar value placed on a child (or any adult for that matter) seeing a whale for the first time?</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
571	152 - 15	Personal Information Withheld	Nanaimo, BC	<p>My family and I watched meteor showers this summer from our boat in Howe Sound: it was a priceless experience. Lights from a gravel mine will almost certainly diminish the night sky. We value this remote area precisely for such advantages as an unobstructed night sky.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

572	152 - 16	Personal Information Withheld	Nanaimo, BC	<p>Burnco executives will not commit to complete this project in 16 years: they have been quoted as intending to maximizing this resource. It remains uncertain if Burnco will wish to extend beyond 16 years. At this time, we are unaware of a commitment from Burnco to provide a public forum with which we might monitor and assess compliance to Burnco's original plan.</p>	<p>The Proposed Project is to extract approximately 20 million tonnes of sand and gravel over the 16 year life of the Proposed Project. This will be reflected in an approved EA certificate and mine plan.</p> <p>BURNCO will establish a Community Advisory Group (CAG) to provide a forum for interested stakeholders to review, discuss and make recommendations. CAG terms of reference and meeting minutes will be made available online.</p>
573	152 - 17	Personal Information Withheld	Nanaimo, BC	<p>Burnco's reputation as a neighbour in Alberta is known to be adversarial. Citizens of Cougar Ridge have learned, following 10 years of Burnco as their neighbour, that Burnco does not adhere to it's original commitment as they fully understand the limited power within local governments to enforce them to comply.</p>	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors' environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
574	152 - 18	Personal Information Withheld	Nanaimo, BC	<p>Again we encourage you to decline Burnco's application: their profit isn't worth the ill will that this project brings to Howe Sound.</p> <p>Thank you for your serious consideration to the concerns of our members.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
575	152 - 19	Personal Information Withheld	Nanaimo, BC	<p>Again we encourage you to decline Burnco's application: their profit isn't worth the ill will that this project brings to Howe Sound.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

576	153 - 1	Stephen Burgoyne	Nelson, BC	Let's get digging as soon as possible.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
577	154 - 1	Personal Information Withheld	West Vancouver, BC	I feel very strongly that there should be NO industrial development like this in Howe Sound	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
578	155 - 1	Rob Stokes	North Vancouver, BC	Please accept this submission as opposition to the proposed gravel pit located at McNab Creek by BURNCO. The entire north end of Howe Sound is finally showing signs of environmental recovery after years of sustained commercial use and abuse. To allow such a gravel pit to be created/maintained would not only partially destroy one of the last pristine valleys in the area, but would also jeopardize the natural healing of both land and sea that's now occurring. The risk is simply not worth it.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
579	155 - 2	Rob Stokes	North Vancouver, BC	In addition to this, the area is now becoming more and more popular as an area of recreation - used by boaters (power and sail), hikers, divers, kayakers/canoists and beach goers etc.. Two vital yacht clubs (Burrard and Thunderbird) are pro-active stakeholders in foreshore lands directly across from the proposed site and as active stewards of their respective properties, stand to be extremely negatively impacted should the proposal proceed.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.

580	155 - 3	Rob Stokes	North Vancouver, BC	<p>I'm in favour of the responsible use of natural resources to assist in driving an economy. But in this case, the economic benefit to the public is far outweighed by the economic benefit to BURNCO themselves. There is virtually zero benefit to local business and to local people themselves – no benefit to the public as a whole. Anticipated employment numbers are low - anticipated community benefit is also low.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
581	155 - 4	Rob Stokes	North Vancouver, BC	<p>Some projects make sense - this is not one of them. Some projects require the public to "suck it up" as the project is for the benefit of the population - this is not one of them. And some projects provide such a positive economic gain that they truly deserve to be viewed under diffuse light - this is not one of them.</p> <p>This project fails on many fronts - so many in fact that it simply cannot be allowed to proceed. I respectfully request that you deny this application and work with BURNCO to find an alternate source of gravel that does not have the same adverse effect on so many people and on such fantastic lands.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

582	156 - 1	Henry Gerber	North Vancouver, BC	This project will adversely affect the value of our property at Ekins Point that my Yacht Club (Burrard Yacht Club) has developed over the last 25 years. It will largely destroy the serene quiet of air and water, has a high risk of pollution not withstanding Burnco's hopes, will destroy the last pristine valley in Howe sound and the only sand beach in the Sound, is a serious risk to the wonderful increase in the return of Herring, Salmon, Dolphins and Whales. In other words it will directly and badly affect the enjoyment of our property for our 400 members.	The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Considering these factors, the modelled Project contributions to noise levels at NR4 (Eakins Point, inside the LSA and across the water from the Project) were below baseline and resulted in Negligible-Not Significant effects.  A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.
583	156 - 2	Henry Gerber	North Vancouver, BC	This in light of the minimal benefit to BC people; the main gain will be Burnco, and we will lose the wonder and magic of this place for 3 generations (including recovery time).	Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.  Benefits of the Proposed Project include: - capital expenditures (\$21.5 million), - operational expenditures (\$13 million/year), - direct, indirect and induced employment, and - taxation revenue.  Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.  BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.  Other benefits or positive effects of the Proposed Project are: - Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses; - Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel; - New amphibian breeding habitat ; - Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.
584	156 - 3	Henry Gerber	North Vancouver, BC	I realize that Burnco has contributed over a quarter of a million dollars to my BC Liberal Government! Don't let that influence your decision. Decide in the favour of the several million people of the lower mainland who want this Sound saved.	Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

585	157 - 1	Jay Werner	Langley, BC	I am totally against this project. Howe Sound is a place my family spends a lot of time. We have seen dolphins playing, others have seen orcas. Just two weeks ago my four year old son and I were crabbing just off McNabb creek. We had beached our dinghy and we're playing in the mud on shore building lifetime memories. Our yacht clubs' very popular outstation is across the bay. I would be very saddened to see this special place ruined by an industrial gravel plant with barge traffic too!! 😞	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
586	157 - 2	Jay Werner	Langley, BC	I am totally against this project. Howe Sound is a place my family spends a lot of time. We have seen dolphins playing, others have seen orcas. Just two weeks ago my four year old son and I were crabbing just off McNabb creek. We had beached our dinghy and we're playing in the mud on shore building lifetime memories. Our yacht clubs' very popular outstation is across the bay. I would be very saddened to see this special place ruined by an industrial gravel plant with barge traffic too!! 😞	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
587	157 - 3	Jay Werner	Langley, BC	I am totally against this project. Howe Sound is a place my family spends a lot of time. We have seen dolphins playing, others have seen orcas. Just two weeks ago my four year old son and I were crabbing just off McNabb creek. We had beached our dinghy and we're playing in the mud on shore building lifetime memories. Our yacht clubs' very popular outstation is across the bay. I would be very saddened to see this special place ruined by an industrial gravel plant with barge traffic too!! 😞	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
588	158 - 1	Personal Information Withheld	Howe Sound, BC	Land Use, Social and Economic impacts: The current Rural zoning reflects land use as determined by the Sunshine Coast Regional District. BURNCO has submitted an application for rezoning however, this application has not made any progress. BURNCO must assume this zoning will be changed as an alternative plan is vague. The knowledge it will forever be a major disruption to this area, particularly to the immediate neighbors and users of this area that value the peace and opportunity to be off grid. BURNCO claims it will bring value to the neighbors by providing power to their homes however, these property owners have chosen this way of life the value of which cannot be measured. Generations of people have enjoyed the privately held land next to this proposed mine.	BURNCO's rezoning application has been submitted to the SCRD who have advised that they are waiting for the outcome of the environmental assessment. The SCRD is an active participant in the Technical Working Group that is reviewing the EAC Application/EIS.

589	158 - 2	Personal Information Withheld	Howe Sound, BC	This area has been frequented by thousands of children over the decades from nearby children's camps and recreation areas. The property owners, outstations, campers, kayakers and anglers that come to McNab Creek do so to enjoy the peace and quiet. Intermittent disturbance from logging, the odd cruise ship passing are nothing in comparison to the constant disturbance from the noise of this gravel mine.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
590	158 - 3	Personal Information Withheld	Howe Sound, BC	Howe Sound currently has industrial zoned areas. Increasing industrial activity in the quiet areas valued for recreation is contrary the best use of this land. The Social Impacts under the Environmental Assessment is the most flawed part of this process. During the first round of public comments, the proponent and those determining the "Valued Components" seem to have dismissed the many comments from the public. Where is it reflected in the "value components the many comments related to the need for a long term plan for the Howe Sound region? Comments that reflect the social/emotional value are dismissed - for example: "My Father is now approaching his 80th Birthday and he is still going to McNab every weekend May thru September to continue improving his most treasured spot. He is not alone though, my Brother and I along with 6 grandchildren are there as well! We can't get enough of the beautiful scenery, quite peaceful days and the clean fresh air. McNab Creek is not only my father's life line it is his legacy!". Comments such as this reflect the sentiments of those that value the more remote parts of Howe Sound. "Pasley Island is located in the southwest part of Howe Sound, and is inhabited by a community of over 200 people who have seasonal residences located on the perimeter of the island. Residents are governed by the Islands Trust and the Sechelt Regional District. No utility services are provided from the mainland. Our residents treasure the existing natural environment, and stewardship of resources is a community priority. Our residents engage in many water sports and many kinds of fishing."	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
591	158 - 4	Personal Information Withheld	Howe Sound, BC	The process minimizes and dismisses the emotional connection people have with this area. The only "valued components" assessed under the social impacts are any need for additional housing or emergency services. How is it justified to dismiss these emotional but very important social values?	The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.  Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.

Issue No.	Source			Public Comment/Issue	Proponent Response
	Ref #	Commenter (Name)	Location		
592	158 - 5	Personal Information Withheld	Howe Sound, BC	No survey or consultations has been conducted by the proponent to quantify the real economic or social impact of this project, however there are thousands of people who have signed a petition opposing this gravel mine at McNab Creek. BURNCO's approach is "you call us" if you want to know more but there is no evidence of BURNCO having proactively sought out its neighbors in the area since they purchased the property.	<p>The Proposed Project was thoughtfully designed to be environmentally responsible, sensitive to the environment of the proposed site while making use of existing conditions. Since the initial design, the project has changed considerably. Revisions and refinements have been made in response to our Project Team's feedback and to comments and concerns raised by regulatory agencies, Aboriginal Groups and the public.</p> <p>A few examples of project considerations, and subsequent changes and components designed to address feedback received to date include:</p> <ul style="list-style-type: none"> <li>- The project life has been reduced from 20-30 years to 16 years, and the maximum depth of excavation has been reduced from 55 metres to 35 metres;</li> <li>- There are no proposed discharges to, or withdrawals from, McNab Creek;</li> <li>- Using existing BC Hydro lines to electrically powered equipment to extract, process and load the aggregate resource to limit exhaust emissions from the burning of fossil fuels;</li> <li>- Reduced the size of the pit lake as the northern edge has been moved away from the McNab Creek Flood Protection Dyke.</li> <li>- Pit lake designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. The elevation of the pit lake will also be used to manage base flows in the natural groundwater watercourses below the pit lake.</li> <li>- Revised the size and location of the processing area to avoid identified fish habitat and to mitigate potential noise effects.</li> <li>- Revised stockpile location and design to limit potential operational noise effects.</li> <li>- Refined berm design and location to limit potential noise and air quality effects.</li> <li>- Areas progressively reclaimed during the operational phase will be re-vegetated to control erosion.</li> <li>- Maintained tree buffer on foreshore to limit noise effects, dust emissions, and visual effects.</li> <li>- Replaced wash water sedimentation ponds and associated discharges with a 95% efficient wash plant that uses recycled water from two large storage tanks. The 5% loss (via retention, evaporation and absorption) will be supplemented with make-up water from a ground water well. No wash water will be discharged.</li> <li>- Fines generated from the crushing, screening, washing of material will be extracted from the wash water and mechanically dried and compressed into sediment cakes which will be used in progressive reclamation of the onsite fines disposal area.</li> <li>- Covered or enclosed Project components and/or operating under wet conditions (e.g., fine water spray) to reduced potential</li> </ul>
593	159 - 1	Ruth Simons	Howe Sound, BC	Terrestrial Vegetation and Economic impacts – In a 1997 21 minute aerial view of McNab Creek and the valley proposed to be mined, shows this area well covered by forest. Has the economic and environmental value of removing trees permanently from this area been fully considered into the economic gains and losses? From the EA: "The Proposed Project Area evaluated during the baseline assessment was approximately 70 ha in size; subsequent refinement of the Project equates to a footprint of 59.9 ha. The footprint is primarily situated within previously harvested areas."	<p>A detailed assessment of potential vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Loss of extent (site clearing and construction of the mine area, conveyor, processing area, and marine loading conveyor) was an effect considered as part of the assessment.</p>

Issue No.	Source			Public Comment/Issue	Proponent Response
	Ref #	Commenter (Name)	Location		
594	159 - 2	Ruth Simons	Howe Sound, BC	<p>When speaking with the Golder Consultants and BURNCO representatives at the public information sessions, their narrative was this area has been previously industrialized due to logging. This seemed to be a rationalization for mining. The EA Summary states: "Much of the Proposed Project area is in various stages of regeneration following logging".</p> <p>This project area has a privately managed forest and forestry is at least renewable. Even during growth, trees and vegetation provide habitat for wildlife. According the Natural Capital assessment for Howe Sound conducted by Suzuki Foundation – Molnar 2014, the value of ecosystem benefits from forests is on the low end \$5,045 up to \$11,820 per hectare.</p> <p>Replacing a renewable enterprise with a non-sustainable one is not in the best interest of the future generations. Where and how is the loss of revenue from the permanent removal of trees calculated?</p>	<p>The loss of wildlife habitat was described using wildlife habitat suitability index models and habitat associations as described in Section 5.3.1.5 of Volume 2, Section 5.3. A detailed vegetation assessment and discussion on proposed Project effects to vegetation is described in Section 5.3.2, Volume 2, Section 5.3.</p> <p>The terrestrial LSA is 569 ha in size and does not contain any old growth forest. Approximately 20.0% (113.8 ha) of the Terrestrial LSA is considered mature forest, occurring mainly on the east side of McNab Creek, and as elevation increases from the valley bottom on either side of the LSA. These areas could be considered merchantable timber. Merchantable timber will be salvaged on site.</p> <p>The trees and vegetation where the pit lake is planned will be permanently lost (28.2 ha). However, reclamation activities post-closure will re-establish mature forest on site. Roosevelt elk winter habitat will be restored through the creation of 24.3 ha of mature forest over approximately 25 years. In addition, a total of 31 ha of moderate to high suitability Roosevelt elk habitat (based on habitat suitability index modelling) to the north, east and south of the Project area will be protected and left unaffected by the Project. Establishing mature forest will also provide suitable habitat for other mature forest species such as northern goshawk and marbled murrelet. Therefore, the removal of trees to establish the pit lake will be compensated for.</p>

595	160 - 1	Personal Information Withheld	Howe Sound, BC	<p>Short term jobs, and minimal permanent jobs need to be offset against the loss of opportunity for other jobs resulting from this gravel mine such as jobs related to the construction industry and services provided to the other property owners in the area.</p> <p>BURNCO currently purchases its supply from other sources in the province so the rationale for this mine is to benefit BURNCO with no benefit accruing to the future generations. Mr. Scott Burns, CEO of BURNCO was overheard stating at the public information meeting that the financial losses incurred from this operation in BC will be carried over to offset profits from his Alberta operation. It is logical a corporation would structure their companies to ensure they pay the least taxes. The longer BURNCO can spread out the losses from this operation the greater benefit to the owners.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
596	160 - 2	Personal Information Withheld	Howe Sound, BC	<p>The communities around Howe Sound have been calling on the government for a comprehensive land and marine use plan for many years now. The assessment by the proponent's consultant on the socio-economic impacts of any one project on the long term future of Howe Sound should is not good enough.</p>	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>

597	160 - 3	Personal Information Withheld	Howe Sound, BC	<p>BURNCO's business case, according to the Operations Manager is based on 4 10 hour shifts and 6,000 tonne barge loads that take 3 hours to load, one barge load every other day. BURNCO's story boards and some of the BURNCO staff at the public information sessions stated the maximum to be mined is 16 million tons over 16 years, but the EA states 20 million tons. What limits the amount of aggregate and the life of the project? What assurances do the public have this project will not expand? Responses from BURNCO staff were vague.</p> <p>It is stated in the documentation that "The actual commercially-extractable aggregate resource volume will be revised depending upon the information and design of the mine plan and the aggregate resource evaluation, but is expected to average 1,000,000 tons per year." Previous studies suggest 51 million tons or 46.5 million tons. Can BURNCO confirm and/or commit to only mining the amount described in the Environmental Assessment Certificate application? What is the probability of BURNCO expanding the mine after the aggregate resource evaluation? What is the current aggregate resource evaluation? Can BURNCO confirm the 20 million tons is the extent of the excavation or is it marketable gravel (meaning more than 20 million tons will eventually be extracted)?</p>	<p>The Proposed Project is to extract approximately 20 million tonnes of sand and gravel over the 16 year life of the Proposed Project. This will be reflected in an approved EA certificate and mine plan.</p>
598	160 - 4	Personal Information Withheld	Howe Sound, BC	<p>There is conflicting information in the application. Some VC sections state that the construction period will be up to 2 years, whereas in other sections (e.g., noise) it states that construction will be 4 months. Can BURNCO confirm?</p>	<p>The estimated duration of project construction will be up to two years. Some components will be constructed relatively quickly, while others will take longer depending on manufacturing times, construction windows and other limitations associated with the location of the Project site.</p>
599	160 - 5	Personal Information Withheld	Howe Sound, BC	<p>What is the forecasted demand for aggregate in the Lower Mainland during the life of the proposed project? What is the supply of aggregate from all sources in the Lower Mainland during the proposed project?</p>	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>

600	160 - 6	Personal Information Withheld	Howe Sound, BC	How can BURNCO be sure that the project will not significantly affect the ecological thresholds , self-sustaining populations and the ecological resilience of marine resources in Howe Sound?	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors’ environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
601	160 - 7	Personal Information Withheld	Howe Sound, BC	Where does it prove BC will be at a crisis in terms of gravel supply? There are many BC based businesses operators currently supplying the market. Many gravel operators along our coast are shipping their gravel outside the province (Sechelt mine). If the local market was in crisis, shouldn't keeping BC's natural resource within the province be a priority? What proof or condition is placed on the proponent to require them to supply the local demands? The gravel from McNab Creek would be shipped to BURNCO's existing facilities replacing the gravel it currently purchases from other suppliers up the coast thereby replacing current jobs, not guaranteeing additional jobs in the market. What is the impact on the current suppliers to BURNCO and has this offsetting been factored into the labor market calculations?	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed in our area, aggregate materials will have to be hauled by truck from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>

602	161 - 1	Personal Information Withheld	Howe Sound, BC	<p>This comment was submitted during the draft AIR – with a response” An assessment of potential effects on a range of valued components, including acid rock drainage and consequences on water drainage will be provided in the EAC Application/EIS.” Were these reports referred to in this comment received and referenced? Ted Franklin - Lions Bay, British Columbia To Mr. Gerry Hamblin (Project Assesment Manager) Acid Drainage will destroy the McNabb Creek River and Estuary as well as continue to leach into the soil and ocean for many years to come. I have two detailed reports, one is a Geochemical Report Owner Silverado Mines Operator Tri-Con Mining Mineral Resources Assessment Report#7935 performed at NcNabb Creek dated March 12, 1980 by Wayne Morton P. Eng and Geologist. Mr. Morton and associates did a detailed study of McNabb Creek. 370 samples were collected from the McNabb Creek Area and shipped to Chemex Labs in North Vancouver for analysis. Page 2 of the report the Geoligist concludes that " Mineralization is in the form of Pyrite, chalcopyrite and molybdenite with minor bornite. Sulphides may occur either on dry fractures or accompany quartz veinlets". Sulphide grains are altered to hematite and the surface of the exposed bedrock is fresh" 3The second report is from Enridge Pipelines which details the Howe Sound Sea To Sky Highway Project as an example of extremely high levels of Sulphites that are exposed when rocks were blasted or crushed in Howe Sound and the problems of how to remove the acidic rock and the acid water created as the sulphite is exposed to oxygen and water. The report ststes that Pyrite has extremely high sulphites released which causes acidic water and destroys life in</p>	<p>Information regarding geochemical testing for ML-ARD potential is presented in Section 5.5.5.2.4 of the EAC Application/EIS. The results of geochemical testing are presenting in Appendix 5.6-C.</p> <p>Yes, geochemical testing was conducted on 3 composite samples collected from two test pits at the Project site. The geochemical testing program included acid base accounting, whole rock and trace metal analysis, and sequential leach tests. The objective of acid base accounting was to determine the material’s potential to generate acidity. The acid base accounting results confirmed that the materials contained no sulphide minerals; oxidation of sulphide minerals is the primary source of long-term acid generation potential. Therefore, the materials are considered to have a low potential for long-term acid generation.</p> <p>The results of whole rock and trace metal analysis were used to identify parameters that may require further consideration in the context of metal leaching potential. Sequential leach testing was used to evaluate the metal leaching potential of the materials. Sequential leach testing is appropriate for evaluating the potential for metal leaching in the absence of reactive sulphide minerals, therefore this test method was used in place of the humidity cell test method (HCT). The results of the sequential leach tests were screened in the context of the BCWQ and CCME Guidelines for the protection of Freshwater Aquatic Life to identify parameters of potential environmental concern. The results of the sequential leach tests were used to develop inputs to the water quality predictions for the Proposed Project.</p>
603	162 - 1	Personal Information Withheld	North Vancouver, BC	<p>This has to be one of the most absurd projects i've seen considered.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
604	162 - 2	Personal Information Withheld	North Vancouver, BC	<p>The Howe Sound has finally been rehabilitated with ocean life coming back. It has moved toward being a recreation center as opposed to a heavy industry center.</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
605	162 - 3	Personal Information Withheld	North Vancouver, BC	<p>You have to consider: 1. The vast amount of recreational zoning that has taken place recently in the Howe Sound. This mine will have a massive impact on the ability of residents and visitors to enjoy the sound.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>

	Ref #	Commenter (Name)	Location		
606	162 - 4	Personal Information Withheld	North Vancouver, BC	2. The noise impact on ocean wildlife which has recently returned to the sound.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>

609	163 - 1	Personal Information Withheld	Howe Sound, BC	<p>In response to the public's concerns about the recovery of Howe Sound BURNCO stated "BURNCO understands your concerns for Howe Sound and is a proud steward of the project site and surrounding area,including Howe Sound. "</p> <p>It would be helpful to know what ongoing work has been conducted to improve the existing fish compensation channel on the property. In 2001 DFO and HSLP signed an agreement under the Fisheries Act with the objective to ensure the loss of fish habitat due to the annual dredging of Rainy River is offset. What is the life of this commitment and wouldn't this condition carry over to any new owner of the property? If the compensation channel is not productive as intended, how has BURNCO invested in this channel on its property to fulfill the obligation?</p> <p>Besides staff participating in a shoreline cleanup at other locations and installing bat boxes, what stewardship has BURNCO undertaken on its property and in Howe Sound to make ongoing improvements to the environmental recovery over the past eight years?</p>	<p>BURNCO has historically supported the communities in which it operates in the form of sponsoring community events, raising money for charities and various forms of donation.</p> <p>Specifically in relation to the existing fish compensation channel, BURNCO has been monitoring its effectiveness and conducting fisheries surveys throughout the property since acquiring the site in 2008.</p>
610	164 - 1	Martin Richmond	Lions Bay, BC	I'm opposed	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
611	164 - 2	Martin Richmond	Lions Bay, BC	the estuary is more important than the mine to me.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

612	164 - 3	Martin Richmond	Lions Bay, BC	The extra traffic in Howe Sound could be a safety issue.	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
613	165 - 1	Allan Sutherland	West Vancouver, BC	I have been boating and hiking in the Howe Sound/Squamish area all my life. It is a beautiful, pristine area within a 30-60 minute boatride of Vancouver. There is no other area like this anywhere in proximity to Vancouver. As the population of Vancouver grows, so too do the demands on nearby recreational areas. This is the case with the Howe Sound/Gambier Island area. Boating, hiking, kayaking, water skiing and fishing, to name a few, are recreations that are growing in popularity in this area so close to Vancouver. To permit a gravel pit to operate in this beautiful recreational area would be shortsighted and most unfortunate.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
614	166 - 1	Beverly Grantham	North Vancouver, BC	There are more than 400 families, well over a thousand people, who regularly use both Ekins and Thunderbird outstations and enjoy the pristine vistas and calming silence they provide only hours from the huge noisy metropolis of Vancouver. McNab Creek and its valley must be preserved to ensure this gem is intact for future generations.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>

625	168 - 6	Personal Information Withheld	North Vancouver, BC	<p>It's only been within the past 20-30 years that this area has slowly been discovered by many passionate, highly educated and hard working recreationalist that have purchased land in this area. There are so many attractions in Howe Sound and one of them is its spectacular scenery and peacefulness. Surely there is more value in recreational land than a gravel mine.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
626	168 - 7	Personal Information Withheld	North Vancouver, BC	<p>Any industrial noise is sure to spoil this, especially the noise from rock crushers reverberating off the mountains surrounding the site and the ocean. I notice that there was no mention of rock crushing in their Burnco's report. Apparently, Burnco did a sound study but they put the noise sensor in a remote location which was no where close to the recreational cottages, yacht clubs, kids camps or residences at McNab Creek. They seem oblivious to the fact that sound travels over water! I also can't see how the baby salmon will tolerate the noise vibrations in the spanning channel which is so close to their operation.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>

634	169 - 7	Personal Information Withheld	Vancouver, BC	<ul style="list-style-type: none"> <li>Increased barge traffic in Howe Sound</li> </ul>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
635	169 - 8	Personal Information Withheld	Vancouver, BC	<ul style="list-style-type: none"> <li>Overall damage to the estuary and surrounding area that comes with industrial development</li> </ul>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
636	169 - 9	Personal Information Withheld	Vancouver, BC	<p>Howe Sound has been returning to its natural beauty, creating tourism, recreational opportunities and vibrant communities. We have seen the return of dolphins and whales, indicators of ecological recovery. The Burnco Aggregate Project does not fit our values. Please say no to this project and preserve the delicate ecosystem of Howe Sound and its diverse local economies.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>

656	185 - 1	Len Shaw	Surrey, BC	<p>I agree with Theresa Beer who wrote: "Given the history of polluting companies that have walked away from paying for environmental damage, we think the onus should be on Burnco to pay up front for possible environmental damage from their operations. They should be required to submit a financial bond (in the tens of millions of dollars range) before environmental approval is given. This will safeguard communities and cover costs for environmental protection, site reclamation and damages from accidents." This should be adopted as standard for such projects. We taxpayers are unfairly paying the clean-up costs for corporations. I want my dollars used for protecting the environment, not salvaging toxic remnants from irresponsible industry.</p>	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. 664	191 - 1	Barry Cogswell	Vancouver, BC	<p>Over the past 200 years, but most markedly since the middle of the 20th Century, we have massively increased the wealth of humans by our resource extraction and industry. We have also dangerously increased the human population to unsustainable numbers. Now our belief in infinite growth is leading the planet and our contemporary civilization to collapse. The indications of that inevitable collapse are many and obvious. It is time we designed a new economic model that is intended for sustainable growth and lasting security. A first step, to finding a sustainable economic model, will be to leave as many resources in the ground as possible, especially those extraction projects with the probability of doing serious ecological harm. We must do this until we can see an intelligent way ahead. We will need a way that will neither destroy the planet's ecological integrity nor the security and future prospects of our descendants.</p> <p>For further Info see book: To Have Borne Witness by same author.</p>	<p>BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. The Sustainable Development Framework for the proposed Project is presented in Section 2.5.4.2 of the EAC Application/EIS.</p>
665	192 - 1	Adam Wray	West Vancouver, BC	<p>As a concerned resident of the Howe Sound region, I do not support this project. The ecosystems it will undoubtedly effect are intrinsically linked with thousands of others, and the ripple impact could be incredibly detrimental to the health of our region. For the sake of my generation and those to come, please consider these impacts and halt this project.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
666	193 - 1	Lynne Zimmerman	McNab Creek, BC	<p>I am writing today in response to Burnco application for a gravel pit at McNabb Creek estuary. As a long time resident of McNab Creek I must express my opposition to this project. I believe our Polite questions to Burnco were taken as cooperation. Contrary to what Burnco has suggested we are not in favour of a gravel pit. Reading through their application they have many of their fax incorrect. Too many to list, but I will touch base on a few.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

667	193 - 2	Lynne Zimmerman	McNab Creek, BC	<p>The land that our community sits on was purchased August 6, 1968. The sunshine coast regional district granted residential zoning for this area. One of the original developers can Townson is still a member of our community. In the early 70s he began bringing cabins up by barge from Richmond and developed our community. Cabins at that time were selling for \$180,000. Since Burnco's intentions were made public seven years ago, property values have dropped, and been stagnant. No one wants to invest across from an area where proposed gravel pit may be approved. While the rest of Vancouver and the lower mainland have experienced huge increases in their residential values hours continues to drop and be of no interest to people looking for recreational enjoyment.</p>	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
668	193 - 3	Lynne Zimmerman	McNab Creek, BC	<p>I would like to express what this community has meant to us. This community because of its remoteness and it's lack of power and services, has been a blessing in disguise's. Many of the residents have been at McNabb for many years we have spent our summers there each year, with our children, and now grandchildren. We enjoy a way of life there, without technology out of TVs, phones, and Electricity, that is hard to describe. It is a place where there is conversation at dinner, games to be played on the beach, fishing and hiking and swimming. Where we must help each other because there is no one else to call. We have become a community of very close neighbors. Our community and our way of life that we have cherished over the last 40 years is at risk of coming to an end.</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

669	193 - 4	Lynne Zimmerman	McNab Creek, BC	This proposed Burnco gravel pit will be 150 feet deep in the middle of one of the last estuaries, and the only beach in the Howe Sound.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
670	193 - 5	Lynne Zimmerman	McNab Creek, BC	It will adversely affect thousands of people at the yacht clubs, kids camps and most directly our community.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
671	193 - 6	Lynne Zimmerman	McNab Creek, BC	It is directly across the river from our residences (450 feet) and the noise levels they have proposed are unacceptable and unrealistic. There are huge discrepancies in their testing of predictive noise levels.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>

672	193 - 7	Lynne Zimmerman	McNab Creek, BC	<p>The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt. Hearing from Burrard yacht club, ( one of three yacht clubs on Gambier island) stating their club has spent roughly \$250,000 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. I can only imagine the losses when you add all the communities together, that will no longer want to spend their recreational time in a noisy industrial area. The economic impact on local businesses in the Howe Sound will be largely felt.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
673	193 - 8	Lynne Zimmerman	McNab Creek, BC	<p>The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt. Hearing from Burrard yacht club, ( one of three yacht clubs on Gambier island) stating their club has spent roughly \$250,000 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. I can only imagine the losses when you add all the communities together, that will no longer want to spend their recreational time in a noisy industrial area. The economic impact on local businesses in the Howe Sound will be largely felt.</p>	<p>The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Considering these factors, the modelled Project contributions to noise levels at NR4 (Eakins Point, inside the LSA and across the water from the Project) were below baseline and resulted in Negligible-Not Significant effects.</p> <p>A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.</p>

684	196 - 6	Personal Information Withheld	Vancouver, BC	We support the creation of a long term comprehensive land and water use plan for economic and social activities in the region that are compatible with sustainable uses of the Howe Sound.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
685	196 - 7	Personal Information Withheld	Vancouver, BC	We ask you to stop this ill-advised project that will destroy a portion of this amazing natural resource, all for the sake of the short term profits of a mining company.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
686	197 - 1	Joseph Bowes	North Vancouver, BC	BURNCO McNab Valley Aggregate Mine ... PLEASE STOP THIS TRAVESTY IN HOWE SOUND  As one of the 400+ families of Burrard Yacht Club that will be directly affected by this proposed project, my wife and I ask you to STOP THIS NOW. And we're asking you to act for more than us alone.  Here is why:	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

688	197 - 3	Joseph Bowes	North Vancouver, BC	<p>2. Risks to commercial shipping - The 'new' Burnco tug+barge traffic will be added to all of the shipping congestion daily for 15 to 20 years! - both current and planned - and notably from the 'other' planned expansions of Port Metro Vancouver shipping. And there is lots of shipping traffic today, let alone in future when it will include the 'new' Burnco tug+barge traffic and significant planned 'new' LNG and oil tanker traffic. All of this shipping traffic has to 'transit' both our local 'metro' waters (and LNG terminals are planned for Howe Sound) as well as the entire southern Gulf of Georgia - which includes the challenges of shipping route 'convergence' at the mouth of the Fraser River - known as Sandheads with its very real and substantial hazards during tide changes against prevailing winds, especially during frequent winter storms - and the restricted 'passages' between the American San Juan Islands and the Canadian Gulf Islands.</p> <p>3. Risks to BC Ferries - All of Tug+barge traffic will 'cross' multiple BC Ferries routes daily for 15 to 20 years!</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
689	197 - 4	Joseph Bowes	North Vancouver, BC	<p>4. The ongoing desecration of the pristine McNab Valley, carried out over 15-20 years has significant societal costs that Burnco will not be paying. In other words, every other 'user' of Howe Sound will pay. NOT Burnco. The fish and flora and fauna will pay. NOT Burnco.</p>	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>
690	197 - 5	Joseph Bowes	North Vancouver, BC	<p>5. In today's day and age, how is it possible to not recognize the obvious recreational, environmental, and social costs - the 'externalities' - that Burnco has ignored in its project submissions.</p>	<p>The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.</p> <p>Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.</p>
691	197 - 6	Joseph Bowes	North Vancouver, BC	<p>6. Noise-pollution 24 x 7 x 365 x 15 to 20 years, and Burnco will NOT pay - and I do not for a moment believe the self-serving and absurd noise estimates provided by Burnco.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>

692	197 - 7	Joseph Bowes	North Vancouver, BC	7. Sight-pollution forever, and exactly the same as what is 'growing' now above the town-site of Gibsons (also on Howe Sound) and Sechelt (on the Sunshine Coast). Enough already.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
693	197 - 8	Joseph Bowes	North Vancouver, BC	8. The unique recreational and environmental attributes of the McNab Valley, which happens to be a very easily accessible 36 km (22 mi) from downtown Vancouver, will be lost forever. And these competing uses by Metro Vancouver residents, tourists, and Howe Sound 'locals' alike, have been conveniently ignored by Burnco.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
694	197 - 9	Joseph Bowes	North Vancouver, BC	<p>Frankly, the very serious negative impacts of this project are an affront, today and forever into future, to:</p> <ol style="list-style-type: none"> <li>1. Every Metro Vancouver citizen and taxpayer,</li> <li>2. Any 'on-the-water' or 'back-country' tourist - local or 'from-away', hiker, kayaker, hunter, fisher, cruise boat passengers, etc, etc - who would 'rec-re-ate' in any way at all in Howe Sound,</li> <li>3. The very effective "Super Natural BC" marketing expense and branding efforts, dating back a decade or so now, and</li> <li>4. Every tourism-related job in this great Province.</li> </ol> <p>Please do not let the 'travesty' of the BURNCO McNab Valley Aggregate Mine progress any further.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

700	201 - 2	Personal Information Withheld	Bowen Island, BC	What is being done to 100% take away the risk of harm to their home? The Howe Sound?	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors' environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
701	202 - 1	Personal Information Withheld	Barry's Bay, ON	Please consider the cost of an environmental disaster in allowing the Burnco Aggregate Mine Project to go ahead. The potential is there to destroy one of the most beautiful habitats in the world. At the very least, make this company setup a trust that would cover the costs of an environmental disaster, as the track record for companies to pay after the fact is very dismal. Such a policy should be in place for any potentially damaging projects, if they are deemed necessary.	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. 717	208 - 6	Andrea Townson	Howe Sound, BC	<p>2) Recreation/tourism impact on paddlers exploring the Sea to Sky Marine trail, recreational fishermen, and recreational boaters as a result of</p> <ul style="list-style-type: none"> <li>a) visual impact;</li> <li>b) noise; (beyond the immediate underwater pit area, it will be hard to mitigate noise along the waterfront and across the water);</li> <li>c) artificial lighting;</li> </ul>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
718	208 - 7	Andrea Townson	Howe Sound, BC	<p>3) Local impact on the recreational property owners in McNab Creek and along Gambier Island, particularly the north and east coastlines.</p>	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
719	208 - 8	Andrea Townson	Howe Sound, BC	<p>The argument that there will be minimal environmental impact because the land has historically been used for logging and forestry is inadequate. Howe Sound is just starting to recover from those years of heavy logging, mining, and industrial use. While Howe Sound will always remain a mixed use body of water, I do not think we truly understand the cumulative impact of increasing industrial activity in the area. Given the proximity to the Lower Mainland, the potential to expand tourism and recreational use of Howe Sound is immense. Disturbing and damaging the shoreline reduces that potential, possibly permanently.</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

720	208 - 9	Andrea Townson	Howe Sound, BC	I understand that the Sunshine Coast needs a diverse and sustainable economy. However, in this particular situation, I think that the environmental concerns outweigh any possible economic benefit.	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>
721	209 - 1	Personal Information Withheld	Langley, BC	<p>Given the history of polluting companies that have walked away from paying for environmental damage, we think the onus should be on Burnco to pay up front for possible environmental damage from their operations. They should be required to submit a financial bond (in the tens of millions of dollars range) before environmental approval is given. This will safeguard communities and cover costs for environmental protection, site reclamation and damages from accidents.</p> <p>We need to learn from past mistakes. Nurturing Howe Sound's marine recovery means making polluters pay — before they set up shop near communities</p>	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>
722	210 - 1	Graham Ross	Vancouver, BC	I am opposed to the Burnco proposal.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
723	210 - 2	Graham Ross	Vancouver, BC	I believe the environmental assessment is inadequate. Howe Sound has seen a huge increase in wildlife in the past decade, from orcas and porpoises to sardines, which will be threatened by this kind of development.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
724	210 - 3	Graham Ross	Vancouver, BC	The basic premise of the environmental assessment is that since the area was used for logging and forestry in the past, there will be not significant impact on the environment. This argument completely ignores the recovery that has occurred in Howe Sound.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>

734	211 - 9	Bruce Townson	Williamsons Landing, BC	I understand that the Sunshine Coast needs a diverse and sustainable economy. However, in this particular situation, I think that the environmental concerns outweigh any possible economic benefit.	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>
735	212 - 1	Sheila Pratt	Maple Ridge, BC	I am not an expert. I will not receive payment for making my comments, unlike the lobbyists who stand to gain financially. I would just like to see our environment be given priority over the economy. After all, the economy is a wholly-owned subsidiary of the environment.	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>
736	212 - 2	Sheila Pratt	Maple Ridge, BC	I understand the world-wide need for sand and gravel, however, considering the many companies that have "accidentally" or otherwise polluted our environment (and negatively affected the health of people as well as other living things), and then either walked away from the damage or denied responsibility for it, I hope Burnco will be required to pay up front for possible damage from their operations. The sum should be a meaningful sum, one that reflects the worst possible damage. Howe Sound will not continue its recovery unless those who might accidentally, or just carelessly, pollute cover the costs before hand. Hopefully prepayment will encourage them to not pollute.	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>
737	213 - 1	Carl Halvorson	Brackendale, BC	I would like to voice my opposition to this project.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

738	213 - 2	Carl Halvorson	Brackendale, BC	<p>After only 16 years of minimum employment what will be the legacy of this project - a large effectively "dead" lake, devoid of any significant ecological value compared to the existing land - a working forest, with all its values will be removed from the ecosystem. Regardless of your views on forestry, forests in transition from logged through succession to mature forest have enormous value as terrestrial habitats - a mine's tailing pond loses these values forever.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>

739	213 - 3	Carl Halvorson	Brackendale, BC	<p>To create this lake, and supposedly ensure the continued viability of McNab Creek, two dams will have to be constructed and maintain in perpetuity. Who will do this after the 16 years of gravel extraction takes place? The upper dam (berm) ensures that McNab Creek will not leave its current course and do as all rivers do, meander across its floodplain. Failure of this upper berm (dike) would mean the total loss of the lower reaches of McNab Creek and probable failure of the lower dike as well. This lower dike is intended to raise the water elevation in the proposed lake high enough to ensure McNab is not dewatered by groundwater loss in the underlying aquifer. How exactly is this ensured? Will there be long term monitoring of McNab Creek above the lake to ensure there is no leaching of groundwater from the creek? Who will pay for this long term monitoring and if it is done, how will the proponent be held responsible or mitigate for any damage? In the worst case scenario, if this scheme does not work, the lower reaches of the creek dry up and fish cannot enter the system at all - it's dead for fish except for those windows when there is enough rainfall and runoff to wet the creek to its mouth.</p>	<p>The McNab Creek Flood Protection Dyke and the Pit Lake Containment Berm will meet the required design standards to be confirmed with the Ministry of Energy and Mines at permitting. It is BURNCO's understanding that the these structures will not be classified as dams. As the property owner, BURNCO will be responsible for required maintenance of these structures, post-operations.</p> <p>A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit. Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until installed works are determined to be functioning as intended.</p> <p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>

740	213 - 4	Carl Halvorson	Brackendale, BC	<p>If our governing agencies, in their wisdom, give approval to this project, there must be significant assurances that McNab Creek will never lose flow through changes (loss) to underlying aquifers. There must be assurances with dollars and financial repercussions that effective long term monitoring will be done. There must be assurances that those same requirements are put in place for both dikes being created. There must be long term monitoring and responsibility to ensure viability of any habitats (replacement spawning channels) created as compensation for habitat loss, and there must be some kind of "value added" component in the proposed lake. If it "must" be done then there must be significantly more compensation for the loss of terrestrial habitats and alluvial fan features. If it is built why not require construction of wetland habitat margins of significant width on all borders of the lake - say 100 meters wide. The proposal does not include any habitat margin or transition. With shallow slopes into the lake and 100 meters of wetland on all margins there is at least some possible benefit - wouldn't it be nice to create wetlands - rather than fill them as we do for port, road or housing development?</p> <p>The project is flawed, it will require long term monitoring and maintenance - who will do this when the gravel is gone?</p>	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors' environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
741	213 - 5	Carl Halvorson	Brackendale, BC	<p>The gravel extraction proposed will be removing one of the most precious resources in our area, clean alluvial gravels suitable for salmonid spawning habitats. In its current form, McNab Creek can meander across its floodplain, and wherever it goes through that process there will be good clean gravel for eggs to be deposited, mature and hatch in. There is that potential here for the ages to come. If this proposal goes through though it is likely the gravel industry's eyes will reach for the next "McNab Creek" to recreate this project and another important alluvial fan with its working successional forest will be converted into a tailing pond.</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

742	214 - 1	Personal Information Withheld	West Vancouver, BC	1. The construction phase: This application and the public presentation did not offer an adequate understanding of the duration of the construction phase, nor the maintenance phase. The construction phase is estimated to be from 4 months to 2 years and as the project is expanded will there be more than the initial construction phase?	The estimated duration of project construction will be up to two years. Some components will be constructed relatively quickly, while others will take longer depending on manufacturing times, construction windows and other limitations associated with the location of the Project site.
743	214 - 2	Personal Information Withheld	West Vancouver, BC	I found that the proponent does not appear to adequately reconcile noise, vessel wake assessment during the construction phase with peak recreational periods such as May to October.	Measures for mitigating potential noise effects are presented in Table 18-1 of the EAC Application/EIS. A Noise Management Plan will be developed, which will include a response plan to noise concerns received from nearby property owners. BURNCO will establish a Community Advisory Group (CAG) to provide a forum for interested stakeholders to review, discuss and make recommendations. CAG terms of reference and meeting minutes will be made available online.
744	214 - 3	Personal Information Withheld	West Vancouver, BC	The maintenance period is indicated as 16 years. AT the end of this period, does the BCEAO have any mechanism to force the proponent to complete this project? does this mechanism have any teeth?	The Proposed Project is to extract approximately 20 million tonnes of sand and gravel over the 16 year life of the Proposed Project. A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit. This will be reflected in an approved EA certificate and mine plan.  Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.
745	214 - 4	Personal Information Withheld	West Vancouver, BC	2. BURNCO's public presentation indicated that > 100 jobs would be required during the construction phase: this number of personnel would require > 2 water taxi trips (return) per day and their associated wakes. The foreshore and the docks, safety of small vessels (kayakers, camp children in canoes, paddle-boarders, small fishing dingys, et) will be adversely affected by this greatly increased traffic. Local knowledge of the area over-rides the proponent's estimation that wakes will not adversely affect these areas or recreation vessels. As a local recreational user with decades of local knowledge and experience, I know this to be untrue, as do all of the dock owners along the north and east shores of Gambier Island.	Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.  There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.  Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.  Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.

746	214 - 5	Personal Information Withheld	West Vancouver, BC	2. BURNCO's public presentation indicated that > 100 jobs would be required during the construction phase: this number of personnel would require > 2 water taxi trips (return) per day and their associated wakes. The foreshore and the docks, safety of small vessels (kayakers, camp children in canoes, paddle-boarders, small fishing dingys, et) will be adversely affected by this greatly increased traffic. Local knowledge of the area over-rides the proponent's estimation that wakes will not adversely affect these areas or recreation vessels. As a local recreational user with decades of local knowledge and experience, I know this to be untrue, as do all of the dock owners along the north and east shores of Gambier Island.	A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential changes in water, sediment and habitat quality from in-water works and propellor scour, and potential injury/mortality from in-water works, propellor scour and vessel strikes. Measures for mitigating potential effects from marine traffic on marine resources are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS. The significance of potential residual effects on marine resources were determined to be negligible or not significant.
747	215 - 1	Personal Information Withheld	Brackendale, BC	After attending one of the information sessions on the proposed Burnco Aggregate Mine Project and mulling over the abundant information presented I think that it is a fairly easy conclusion to make that in no way would we welcome this project to the jewel that we call Howe Sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
748	215 - 2	Personal Information Withheld	Brackendale, BC	One area that came to light in the presentation is that there will be minimal environmental impact because the land has been used in the past for logging. Really! This is such backwards thinking for 2016 and the future that we want for Howe Sound. We have seen first hand with the clean-up of the Britannia Copper Mine that we can reverse the environmental damage that we once created. The Howe Sound Marine Trail is proof that we can create a different future and story for our beloved Howe Sound.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area. BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.

750	216 - 1	Personal Information Withheld	West Vancouver, BC	<p>In Table 7.3-9 of the Burcno Aggregate Application : both for the construction and operations phase, Burnco indicates that existing logging boom tenure traffic will be similar to water taxis and barges and tug traffic that will bring both personal and equipment to the site. This is inaccurate to suggest that recreational traffic are somehow 'educated and experienced' due to having had prior experience with log boom-related (typically very slow) water transportation. Is it not expected that water taxis will be tasked with transporting employees/workers in as efficient manner as possible? in the least amount of time? If so, local recreational boaters can expect high-speed water taxis and high-speed tugs with the ensuing high wakes to affect recreational traffic through this area. Children's camp canoes, all kayakers, all wake-boarders and paddle-boarders, small fishing dingys and swimmers should expect to be swamped by these commercial vessels. It is unrealistic and unsafe that BURNCO expects that these groups will have had experience with commercial water traffic and be aware of the federal DOT COLLISION REGULATIONS. There can be no 'mitigation' of the risk for safety in this widely-used area during the summer months. Burnco's Marine Transportation Plan does not adequately address that these users will not have VHF radios nor be reading Notices to Mariners.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. 751	217 - 1	Ruth Simons	Howe Sound, BC	<p>Flood hazards in the McNab Valley</p> <p>At the public information session I heard an explanation of how stream water would be held back from overflowing into the pit by the preventative berms. I live in Howe Sound and there have been many extreme rain and wind events in the past where erosion has caused landslides and debris flooding. There is an aerial video of the McNab Creek and project area from 1997 that shows a landslide on the bank of McNab Creek at the top east side of the project area. The landslide brought many large trees into the creek and there is evidence they were carried downstream as seen in the video. It seems logical to me that all development in the Howe Sound watershed should be using similar predictions for extreme rainfall due to climate change. Page 5-4-28/29 is confusing to me as it seems that because Golder has no evidence of significant debris flows and floods and conclude no further investigation is needed. It also says further investigation should be done to ensure engineering is adequate. Would the bank erosion evident in the 1997 video not be considered significant and how is it determined this could not happen again given the ongoing logging in the area? How can this environmental assessment determine any significant environment harm without these studies being complete? When I asked the Geotech consultant if the most up to date flood predictions were used in the design of the preventative berms, he referred me to the Surface Water consultant. I asked the consultant who had "Climate Change" on her badge and she could not answer the question. The Surface Water consultant suggested I submit my comments recommending the most up to date flood predictions based on</p>	<p>It is acknowledged that there is a conflict in the cited text. The lack of evidence for significant, historical debris floods or debris flows in McNab Creek both upstream and downstream of the Project Area indicate that the risk of impacts to the Project Area can be considered low. Proposed geotechnical and natural hazards mitigation, which includes construction of the flood protection dyke, will further reduce the potential for impacts to the Project Area.</p>
752	218 - 1	Personal Information Withheld	Howe Sound, BC	<p>During the September 14th public information session, Dr. Jeff Marliave of the Vancouver Aquarium brought to the Marine Resources consultant's attention the latest data regarding cloud sponge reefs and other information relevant to the project. Dr. Marliave and the Howe Sound research group have been studying Howe Sound over the past 30 years. It was not evident the Golder Consultants had the requested the latest information from the Vancouver Aquarium. Dr. Marliave said he would send the data to the consultant but will that information be reflected in the assessment? There were concerns about the alternative shipping route and its proximity to important cloud sponge reefs en route.</p>	<p>A detailed assessment of potential effects on marine resources, including marine benthic communities, is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>Glass sponges are a group of filter feeding organisms which can form large sponge reefs that provide habitat for other marine invertebrate and fish species. Glass sponges in Howe Sound live at depths as shallow as -20 m (chart datum). BURNCO has included glass sponges in the assessment of potential effects on marine resources.</p> <p>Although no glass sponges were observed during the dive and towed video surveys of the Proposed Project area, foreshore and sub-tidal nearshore conducted for the assessment, their known occurrences throughout Howe Sound have been documented. The marine footprint of the Proposed Project does not overlap with any known or mapped locations of glass sponges or glass sponge reefs occurrences.</p> <p>Potential residual effects of propeller scour and aggregate spills on glass sponges were assessed. Propeller wash velocities at the depths at which glass sponges occur are predicted to be within the same magnitude as tidal currents present at this depth. With the application of proposed mitigation, the likelihood of an aggregate spill adversely affecting glass sponge colonies is low. The significance of potential residual effects on marine benthic communities, including glass sponges, were determined to be negligible or not significant.</p>

	Ref #	Commenter (Name)	Location		
753	219 - 1	Personal Information Withheld	West Vancouver, BC	<p>Section 2.2 of the Burnco EA application fails to convince me that the lower mainland cannot meet the growing need for gravel. I cannot find any evidence that existing supplies in the lower mainland will diminish in the future or that no new sources will be found in other areas. Burnco also appears to justify the McNab Creek site by informing us that THEIR shipping costs will be reduced (for gravel transport that they already ship from Port MacNeil, Jervis Inlet, and Sechelt). That the proponent wishes to reduce their costs does not adequately overcome the future and certain losses to be placed on the local community/recreational users: property values, recreational opportunities (both personal and business). The environmental loss is not justified. How does one measure the pride that our community derives from Howe Sound? This project offers no benefit or advantage to Howe Sound and significantly reduces the immediate and long-term quality of life in the area. This project is devoted to the singular profit of the proponent and no one else. McNab Creek is the worst choice for resuming industry in Howe Sound.</p>	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>
754	220 - 1	Personal Information Withheld	Howe Sound, BC	<p>Health Impacts</p> <p>I was asked at the public information session in West Vancouver by BURNCO's Project Manager why I care how and when the BURNCO mine operates when I can't hear or see it. I have frequented Thornborough Channel over the past many years with friends and family. We and many others refer to the area as the Aloha Channel. Due to the topography it is one of our favorite areas in Howe Sound for enjoying the warm sun and water for swimming. We visit year round as it is close to home and instantly relaxing. My daughters and their friends care very much for this area. A trip to Aloha Channel is always a birthday wish.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>

755	220 - 2	Personal Information Withheld	Howe Sound, BC	When people go to quiet places close to nature they derive valuable health benefits. These health benefits are not considered a “value component” in this EA process and should be. There are numerous studies on the benefits of natural sounds on mood behavior. By a simple search on-line it is possible to find studies conducted out of universities that support the fact natural scenes and natural sounds can be beneficial to health by reducing stress. Thousands of people testify they visit this part of Howe Sound for the peace and to be close to nature. Howe Sound, one of Canada’s southernmost fjords, is close to large urban centre and within one hour from busy Vancouver people can be in this peaceful part of Howe Sound.	A detailed assessment of potential public health effects of the Proposed Project is presented in Volume 2, Part B – Section 9.1 of the EAC Application/EIS.  Potential effects of the Proposed Project on human health assessed considered activities contributing to air emissions, deposition of particulate matter to terrestrial environments, and emission of substances to aquatic environments.  Following the application of proposed mitigation, all potential health effects were determined to be negligible or not significant.
756	220 - 3	Personal Information Withheld	Howe Sound, BC	The rationalization Golder Consultants make about logging activity being a baseline that then justifies the noise of gravel extraction, crushing and barge loading is like comparing apples to berries. The noise from this gravel operation is being introduced to what is now a peaceful area as logging activity is intermittent. The consultant evaluating noise impacts has never been to the project area. He seemed to not take into account the geography of the mountains on either side of this project and how sound reverberates off these mountains. Those who live in Howe Sound can easily testify how far sounds travel across the water. To benchmark the acceptable noise levels against Health Canada’s acceptable health standards is not relevant to what is acceptable in a peaceful area and the impact on mental health. Ambient sounds of nature cannot be compared to the sounds of artificial industrial noise. As Metro Vancouver continues to grow, protecting these quiet places close to the urban area is of great intrinsic value, far greater than short term revenues and twelve direct permanent jobs.	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible.  The SCR D noise bylaw was considered as part of the assessment.
757	221 - 1	Betty Morton	Bowen Island, BC	I strongly oppose the Bunco McNab Creek proposal for the harm it will do to our environment, community and economy.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

758	222 - 1	Beverley	Grantham, BC	The unbearable noise created by an aggregate mining, crushing and loading operation running 24/7 will drive away marine mammals that currently frequent Howe Sound. It is a well documented scientific fact that removing apex predators from an eco system results in dangerous imbalances that can cause extinctions of other species.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
759	222 - 2	Beverley	Grantham, BC	The unbearable noise created by an aggregate mining, crushing and loading operation running 24/7 will drive away marine mammals that currently frequent Howe Sound. It is a well documented scientific fact that removing apex predators from an eco system results in dangerous imbalances that can cause extinctions of other species.	<p>The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCR noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.</p> <p>Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.</p>
760	222 - 3	Beverley	Grantham, BC	The unbearable noise created by an aggregate mining, crushing and loading operation running 24/7 will drive away marine mammals that currently frequent Howe Sound. 762	223 - 1	Personal Information Withheld	Howe Sound, BC	Comments on studies regarding Socio-economic and land-use. It was determined the Local Study Area would extend out into Thornborough Channel 1.5 kms. The Local Study Area for noise should include the residents and outstations directly across from the project area on Gambier Island particularly since these affected stakeholders have been very vocal about this project from the onset. Sound travels much farther across the water, particularly when noise is reverberating off the mountains. Because this area is so quiet, many can testify that voices can be heard from people on boats near McNab by people on Gambier across the water.	The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Considering these factors, the modelled Project contributions to noise levels at NR4 (Eakins Point, inside the LSA and across the water from the Project) were below baseline and resulted in Negligible-Not Significant effects. Therefore the LSA will not be expanded.  A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.
763	223 - 2	Personal Information Withheld	Howe Sound, BC	In the section on Non-Traditional Land Use it appears some of the problem with the assessment is the data sourced from the Province of B.C. on Recreational Features Inventory figure 7.3-8 is misleading and not representative of the high sensitivity by recreational users. The homes on the north side of Gambier directly across from this project, the yacht club outstations and waters inbetween "unspecified". This data is certainly not accurate however, if the proponent and consultants had read the comments during the draft application, this discrepancy would be corrected. The other omission from this map is any designation of the recreation value of the waters of Howe Sound.	The homes on the north side of Gambier directly across from this project, the yacht club outstations and waters in between were considered as part of the assessment, particularly in relation to potential nuisance effects and marine transportation. Recreational areas, and recreational fishing areas in particular, are presented in Figures 7.3-6 and 7.3-7.
764	223 - 3	Personal Information Withheld	Howe Sound, BC	The noise rating of 53 decibels that will be heard by the property owners at McNab Strata and close to McNab Creek is unacceptable. If buildings require walls with sound ratings for this decibel level so neighbors cannot hear the noise, then BURNCO should be required to construct walls to prevent this noise.	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.
765	223 - 4	Personal Information Withheld	Howe Sound, BC	The socio-economic studies omit key social values of Howe Sound, especially for youth. Interviews with "Key informants" omitted interviews with any of the camp operators who have brought at least 3,000 youth to this area every year for decades. No interviews were conducted with the Boys and Girls Club of South coast BC. Same can be said for realtors in the area, specifically Rick Gustafson who has specialized in sales on Gambier Island for many years.	A detailed assessment of potential recreation effects - including youth camps - are considered in Volume 2, Part B – Section 7.3 of the EAC Application/EIS. Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.

	Ref #	Commenter (Name)	Location		
766	223 - 5	Personal Information Withheld	Howe Sound, BC	Tourism data is minimal: Over the past few years Howe Sound has seen the regular return of Orcas and Grey Whales to this area and Orcas have been captured on film in front of McNab Creek. This has attracted new tour operators, including Prince of Whales Whale watching tours. Cruise ships travel past McNab Creek enroute north. Measures of Tourism should not be based on commercial operations only as this would imply that Gambier Island does not have "tourism". Recreation property owners on Gambier Island bring visitors to the island and there are many trail runners, hiking groups, school and educational groups that travel to Gambier by water taxi, the scheduled Stormaway water taxi or come by private boat or kayak. Hikes to Gambier Lake and Mount Artaban are accessed via the Halkett Bay Provincial Marine Park. None of this has been captured in this context statement the project location.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
767	223 - 6	Personal Information Withheld	Howe Sound, BC	The assessment states phone-based interviews were conducted with "key informants" but the list of references indicates few personal phone calls and does not list who was interviewed. Owners of the Douglas Bay Development were no contacted by phone or email to understand why they have strong opposition to this project due to their proximity across the water.	Phone based interviews are cited as personal communications (pers.comm.) within the text of the EAC Application/EIS and details included in the references (Part G, Section 21). The list of key informants included the following: Burrard Yacht Club, Coastal Inlet Adventures, District of Squamish, Don's Water Taxi, Gambier Island Local Trust, Gibsons and District Chamber of Commerce, Gibsons Landing Inn, Irwin Motel, Islands Trust, McNab Creek Strata, Sewell's Marina, Squamish Yacht Club, Sunshine Kayaking, Thunderbird Yacht Club, Recreation Sites and Trails BC and West Vancouver Fire & Rescue Services.
768	223 - 7	Personal Information Withheld	Howe Sound, BC	There was no interview with Howe Sound Pulp and Paper, referenced as the oldest pulp and paper mill on the coast and oldest industry in Howe Sound. This mill is not far from the project area and there is significant history between this company, DFO and the artificial spawning channel BURNCO is proposing to remove. The attached contract between HSLP and DFO explains that relationship. In order to understand the context of this land use, reference to this history of this spawning channel provide more context to the Resource Use.	There was no interview with Howe Sound Pulp and Paper, however their history with the site and within Howe Sound is well documented. The history of the constructed groundwater-fed watercourse on the Property is presented in Section 2.4.2.1 of the EAC Application/EIS.
769	223 - 8	Personal Information Withheld	Howe Sound, BC	Lions Gate Consulting published a Socio-Economic baseline of Howe Sound in May 2016. Golder refers to the Lions Bay Consulting report for Howe Sound produced in 2013. This report covered only a portion of Howe Sound in 2013 so is not representative of the entire region. Since this assessment is for a project that in the future, what updates to the assumptions in this EA are relevant in the new report that studies the whole of Howe Sound and the RSA?	The study area for the May 2013 report entitled 'Socio-Economic Baseline of the Howe Sound Area' was identified as "The Local Study Area (LSA) includes the municipalities of Bowen Island and Lions Bay, Gambier and Anvil islands and crown land in the vicinity of McNabb Creek on the north shore of Howe Sound". This study area is in the general vicinity of the proposed BURNCO project, and as such this report was accessed and reviewed for the environmental assessment of the BURNCO project, along with several other regionally relevant documents. In addition, several interviews were undertaken to help document 'existing conditions' or a baseline of various commercial, recreational, residential, industrial uses of lands and resources in the general vicinity of the BURNCO Project area, including the waters of Howe Sound.

770	223 - 9	Personal Information Withheld	Howe Sound, BC	I strongly disagree with the conclusion in the environmental assessment: "The residual adverse effects are considered to be not-significant however as there are established forest industry activities in the area, recreational and tourism activities are not expected to be displaced from the LSA and the effect is expected to be limited to the medium-term (i.e., the life of the Project). " The current ongoing forestry activities are not a rationalization for a 16 year mining operation that brings constant significant noise and permanently removes the forest which is renewable. The residual effects of this project will have significant social and economic impacts on the current users of the area and be a deterrent for future recreational and tourism potential in the area.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
771	224 - 1	Personal Information Withheld	North Vancouver, BC	I am opposed to the Burnco development in Howe Sound. See my concerns and questions in the attached document. [attachment unavailable]	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
772	225 - 1	Dean Johnston	Gambier Island, BC	Don't destroy the beauty of this place.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
773	225 - 2	Dean Johnston	Gambier Island, BC	It is a draw for tourists and locals alike.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
774	225 - 3	Dean Johnston	Gambier Island, BC	We see whales, porpoises, sea lions and eagles frequently. My children deserve to enjoy this beautiful part of Howe Sound too!	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity or quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.

779	228 - 1	Personal Information Withheld	Gambier Island, BC	<p>As a property owner in Howe Sound I am opposed to the Burnco mining project. McNab Creek Estuary provides nutrient rich stream waters that fertilize the ocean and create rich and productive ecologies. It is a delicate ecosystem still recovering from past logging. Approval of the Burnco proposal will return the area to an industrial zone.</p> <p>Despite Burnco's proposed mitigation measures, damage to this recovering ecosystem will be unavoidable.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
780	228 - 2	Personal Information Withheld	Gambier Island, BC	<p>Environmental Concerns:</p> <ul style="list-style-type: none"> <li>• Damage to salmon, herring and other marine life</li> </ul>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. 789	229 - 1	Personal Information Withheld	Lions Bay, BC	I am NOT in favour of Burnco's proposed gravel mine at McNab Creek where fragile ecosystems will be destroyed. The recovery of Howe Sound is at stake, and the environment should not be sold to profit a few shareholders. For generations to come, we need to protect this area. No project approval!!! We can't undestroy the area when Burnco goes broke or walks away after the damage is done...	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
790	230 - 1	Richard H. O'Neill	Roberts Creek, BC	Howe Sound is just beginning to recover from the disastrous effects of previous industrial development. As a part of the Salish Sea the entire Howe Sound area should be allowed to return to its former natural state and become habitat for many species of fish and marine mammals. It will have far greater value as a clean natural habitat area than it will ever have from short term industrial projects.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
791	230 - 2	Richard H. O'Neill	Roberts Creek, BC	Howe Sound is just beginning to recover from the disastrous effects of previous industrial development. As a part of the Salish Sea the entire Howe Sound area should be allowed to return to its former natural state and become habitat for many species of fish and marine mammals. It will have far greater value as a clean natural habitat area than it will ever have from short term industrial projects.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. 792	231 - 1	Personal Information Withheld	Horseshoe Bay, BC	I fail to understand the merits of trading a project of high risk to our fragile ecosystem in exchange for 12 low-skill jobs. It just doesn't make sense.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
793	231 - 2	Personal Information Withheld	Horseshoe Bay, BC	I strongly oppose this proposal for the harm it will do to our environment, community and economy. The Burnco project will irreversibly harm important wildlife, riparian and ocean habitat.	<p>The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.</p> <p>Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.</p>
794	231 - 3	Personal Information Withheld	Horseshoe Bay, BC	Howe Sound is only recently recovering from decades of environmental degradation from the mining industry. British Columbians are celebrating the tentative return of spawning herring and salmon along with crabs, prawns, dolphins and whales.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. British Columbians are celebrating the tentative return of spawning herring and salmon along with crabs, prawns, dolphins and whales.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
796	231 - 5	Personal Information Withheld	Horseshoe Bay, BC	Howe Sound is only recently recovering from decades of environmental degradation from the mining industry. British Columbians are celebrating the tentative return of spawning herring and salmon along with crabs, prawns, dolphins and whales.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
797	231 - 6	Personal Information Withheld	Horseshoe Bay, BC	Department of Fisheries and Oceans (DFO) has repeatedly opposed the project as it is so critical to the ecosystems. Please respect the findings of our Ministry scientists by rejecting this project.	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO's involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>

798	231 - 7	Personal Information Withheld	Horseshoe Bay, BC	Since Burnco itself acknowledges that this project will destroy the estuary and damage the Howe Sound ecosystem, why proceed? For such little return?	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
799	231 - 8	Personal Information Withheld	Horseshoe Bay, BC	The 12 low-skill jobs promised by Burnco will come at the cost of more sustainable industries including fisheries, recreation, film and tourism from which dollars are currently flowing into Howe Sound communities.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
800	231 - 9	Personal Information Withheld	Horseshoe Bay, BC	Burnco is a bad deal for Howe Sound, a bad deal for the surrounding communities, and a bad deal for British Columbia.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
801	232 - 1	Personal Information Withheld	Gambier Island, BC	As a property owner in Howe Sound I am opposed to the Burnco mining project.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

802	232 - 2	Personal Information Withheld	Gambier Island, BC	McNab Creek Estuary provides nutrient rich stream waters that fertilize the ocean and create rich and productive ecologies. It is a delicate ecosystem still recovering from past logging. Approval of the Burnco proposal will return the area to an industrial zone.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
803	232 - 3	Personal Information Withheld	Gambier Island, BC	Despite Burnco's proposed mitigation measures, damage to this recovering ecosystem will be unavoidable.	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors' environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>

Issue No.	Source			Public Comment/Issue	Proponent Response
	Ref #	Commenter (Name)	Location		
804	232 - 4	Personal Information Withheld	Gambier Island, BC	Environmental Concerns: - Damage to salmon, herring and other marine life	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
805	232 - 5	Personal Information Withheld	Gambier Island, BC	- Noise from gravel crushing affecting wild life	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>

	Ref #	Commenter (Name)	Location		
806	232 - 6	Personal Information Withheld	Gambier Island, BC	- Disruption to the elk, an at risk species	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
807	232 - 7	Personal Information Withheld	Gambier Island, BC	- Lighting during construction and operation causing further disruption to life in the area	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

808	232 - 8	Personal Information Withheld	Gambier Island, BC	- Compromised air quality due to emissions	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>
809	232 - 9	Personal Information Withheld	Gambier Island, BC	- Increased barge traffic in Howe Sound	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project’s barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
810	232 - 10	Personal Information Withheld	Gambier Island, BC	- Overall damage to the estuary and surrounding area that comes with industrial development	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

811	232 - 11	Personal Information Withheld	Gambier Island, BC	Howe Sound has been returning to its natural beauty, creating tourism, recreational opportunities and vibrant communities. We have seen the return of dolphins and whales, indicators of ecological recovery. The Burnco Aggregate Project does not fit our values. Please say no to this project and preserve the delicate ecosystem of Howe Sound and its diverse local economies.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
812	232 - 12	Personal Information Withheld	Gambier Island, BC	Howe Sound is one of the most beautiful fjords in the world and a BC landmark on the Sea to Sky corridor. Howe Sound is the home to a great variety of mammals, fish, frogs, rare birds and invertebrates. It supports jobs in the local economy, especially tourism which has a significant ripple effect through the region's economy, and brings pleasure to thousands of locals and tourists every year.  We all cherish and celebrate the recovery of Howe Sound after decades of toxic pollution from heavy industry. BC taxpayers paid millions to clean up the Britannia mine in Howe Sound and now finally those actions, along with other conservation efforts, are paying off with the return of fish stocks, dolphins, orcas, whales and a proliferation of bald eagles and other wildlife.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area. BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
813	232 - 13	Personal Information Withheld	Gambier Island, BC	Please bring to an end the proposed Burnco open pit mine before massive economic harm is caused to thousands of local residents and businesses including our film and tourism industries as well as countless dollars have been spent by both BC and Federal regulators evaluating whether the environmental destruction of a portion of this sensitive ecosystem can be "mitigated".	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
814	232 - 14	Personal Information Withheld	Gambier Island, BC	We support the creation of a long term comprehensive land and water use plan for economic and social activities in the region that are compatible with sustainable uses of the Howe Sound.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.

819	233 - 4	Personal Information Withheld	Squamish, BC	Need aggregates for construction? Use the local company in Squamish! Coast aggregates! Burnco already has 3 locations in bc and many more in Alberta and Saskatchewan.	A further source of aggregate material is required to ensure the reliability of supply. Securing alternate suppliers is not the preferred long-term option for BURNCO as there is too much uncertainty surrounding the ability to supply aggregate material during times of increased demand, in addition to the in ability to control the quality and price of material.
820	233 - 5	Personal Information Withheld	Squamish, BC	This place is too beautiful to ruin it with a mine. There are only so many untouched places to enjoy with your family and friends. Where do you plan on building your dream cabin?! Or taking sunset rides on the boat with your husband? There are A MILLION other places to extract gravel. Don't make mcnab creek one of them. Industry is not everything and with Squamish finally on the map, let's keep this place beautiful and pristine. We paid our environmental price in industry with britannia beach, nexen, logging.	Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.

825	234 - 4	Stephen Zimmerman	McNab Creek, BC	Will the added tax revenue benefit from Burnco cover the compromised rehabilitation projects from decades past?	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
826	235 - 1	Personal Information Withheld	Squamish, BC	I am opposed to the Burnco Gravel Pit at McNab Creek. When I can see the flock of cranes fly in, circle around and land on the beach to wait patiently for a fish to swim by. When I can watch eagles fly by ,almost at eye level, and watch them hunt. When I can watch a bear enter the estuary and munch on the grass there. When I can see a herd of Elk venture out on to the estuary and then wade around in the water. It is all awesome! When the gravel pit comes in this will all change. Change, not for the better.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

829	235 - 4	Personal Information Withheld	Squamish, BC	A gravel pit this close to an estuary is definately not a good idea.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
830	235 - 5	Personal Information Withheld	Squamish, BC	The lake that Burnco will leave when the mining process is over.What chemicals will lurk in the bottom of the lake. A lake wasnt there before they came and it shouldnt be there when they leave.	<p>A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit. Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until installed works are determined to be functioning as intended.</p> <p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>
831	235 - 6	Personal Information Withheld	Squamish, BC	Howe Sound is a beautiful area. Please dont allow Burnco to mine there. I'm sure gravel can be found elsewhere	<p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>

837	239 - 1	Frank Mogridge	North Vancouver, BC	I am a pleasure boater using this area and am very concerned with the environmental impacts of a project of this magnitude. It is hard to believe approval may be given for Burncos proposal I attended a information session where Burncos representatives/scientists were defending their take on impacts of this project and providing limited mitigation to some of the publics concerns.	<p>Accepted EA practice in BC and Canada includes the identification of mitigation measures that are technically and economically feasible (i.e., practical) means of preventing or reducing to an acceptable level any potential adverse effect of the proposed project. BCEAO (2013) considers mitigation to be any practical means or measures taken to avoid, minimize, restore on-site, compensate, or offset the potential adverse effects of a project. Compensation means measures taken to further reduce the residual effect, and may include direct physical measures (e.g., habitat enhancement, restoration or creation on, near or away from the project site), or financial mechanisms that have the outcome of reducing the residual effect (e.g., contributions to research, recovery plans, population enhancement programs for endangered species). Offset is defined in the BCMOE's Procedures for Mitigating Impacts on Environmental Values (2012) as means to counteract, or make up for, a residual impact on an environmental component.</p> <p>Potential effects on McNab Creek are being mitigated through avoidance. There are no proposed discharges to or withdrawals from McNab Creek. The pit lake is being designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. Similarly, the size and location of the processing area was selected to avoid identified fish habitat.</p> <p>Examples of mitigation measures to reduce or minimize potential effects are:</p> <ul style="list-style-type: none"> <li>- Sediment and erosion control planning and monitoring the effectiveness of prescribed measures</li> <li>- Restricting clearing of wildlife habitat during breeding and calving periods, bird nesting periods and elk overwintering</li> <li>- Installing nest boxes for Western screech-owls in nearby forest habitat</li> <li>- Maintaining vegetation linkages and buffers to minimize habitat fragmentation and to allow escape routes for large mammals.</li> <li>- Monitoring for marine mammals during impact pile driving activities and maintaining a marine mammal safety zone based on injury noise threshold criteria.</li> </ul> <p>Examples of compensation or offset measure are:</p> <ul style="list-style-type: none"> <li>- Constructing a 790 metre extension of the lower segment of groundwater channel WC2 that will collect surface flow diverted through loss of the upper segment of WC2. This offset will increase the wetted area of the lower segment of WC2.</li> <li>- Establishing 1,250 m2 of new amphibian breeding ponds to offset the loss of existing amphibian habitat.</li> </ul>
838	239 - 2	Frank Mogridge	North Vancouver, BC	The noise study in my opinion did not take into account and represent the activites and noise that this will generate in the area.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>
839	239 - 3	Frank Mogridge	North Vancouver, BC	What limitations will be placed on them, if approved for hours of operation??	<p>The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCRD noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.</p> <p>Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.</p>

840	239 - 4	Frank Mogridge	North Vancouver, BC	For what appears to be jobs for 12 people versus the impact to the environment in this area for generations to come where is the value for the public of such approvals being granted ...this is hard to comprehend.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
841	239 - 5	Frank Mogridge	North Vancouver, BC	There will be visual impacts to this presently beautiful area the scar left on the mountainside and the environmentally dead water lake left behind will be a lasting clear message of the mistake made if these approvals are granted.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

842	240 - 1	Personal Information Withheld	Coquitlam, BC	We are two Lower Mainland based sea kayakers who have visited this area many times, including working on the recently created Sea to Sky Marine Trail. This (and just about any further) industrial development in Howe Sd is unwelcome, as the area starts to recover from a devastating century of heavy resource exploitation that showed only disrespect for this wonderful fiord.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
843	240 - 2	Personal Information Withheld	Coquitlam, BC	However, we can see that the company has gone to some lengths to minimize negative impacts. Their environmental consultants provided good information at the recent open house.	Accepted EA practice in BC and Canada includes the identification of mitigation measures that are technically and economically feasible (i.e., practical) means of preventing or reducing to an acceptable level any potential adverse effect of the proposed project. BCEAO (2013) considers mitigation to be any practical means or measures taken to avoid, minimize, restore on-site, compensate, or offset the potential adverse effects of a project. Compensation means measures taken to further reduce the residual effect, and may include direct physical measures (e.g., habitat enhancement, restoration or creation on, near or away from the project site), or financial mechanisms that have the outcome of reducing the residual effect (e.g., contributions to research, recovery plans, population enhancement programs for endangered species). Offset is defined in the BCMOE's Procedures for Mitigating Impacts on Environmental Values (2012) as means to counteract, or make up for, a residual impact on an environmental component.  Potential effects on McNab Creek are being mitigated through avoidance. There are no proposed discharges to or withdrawals from McNab Creek. The pit lake is being designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. Similarly, the size and location of the processing area was selected to avoid identified fish habitat.  Examples of mitigation measures to reduce or minimize potential effects are: - Sediment and erosion control planning and monitoring the effectiveness of prescribed measures - Restricting clearing of wildlife habitat during breeding and calving periods, bird nesting periods and elk overwintering - Installing nest boxes for Western screech-owls in nearby forest habitat - Maintaining vegetation linkages and buffers to minimize habitat fragmentation and to allow escape routes for large mammals. - Monitoring for marine mammals during impact pile driving activities and maintaining a marine mammal safety zone based on injury noise threshold criteria.  Examples of compensation or offset measure are: - Constructing a 790 metre extension of the lower segment of groundwater channel WC2 that will collect surface flow diverted through loss of the upper segment of WC2. This offset will increase the wetted area of the lower segment of WC2. - Establishing 1,250 m2 of new amphibian breeding ponds to offset the loss of existing amphibian habitat.
844	240 - 3	Personal Information Withheld	Coquitlam, BC	Daytime noise seems to be the chief concern while the pit is operating. Further acoustic measures should be explored for the barge loading process.	Noise monitoring locations will be included as part of the Noise Management Plan. Stations will be located to monitor noise levels at the McNab Strata and at Ekins Point on Gambier Island.

	Ref #	Commenter (Name)	Location		
845	240 - 4	Personal Information Withheld	Coquitlam, BC	Rehabilitation of the landscape post exhaustion of the pit must include measures to prevent any possible breach of the creek into the artificial lake or pond. All pilings, equipment and buildings must be removed sensitively. We strongly believe and urge that the developer be required to leave a positive local legacy by creating a marine-access-only campsite for very small boats above the fine beach behind the former loader location. This would complement other existing sites in Howe Sd which are already getting significant use in this growing recreation area. 16 or 20 years from now, no doubt all other nearby sites will be at maximum usage capacity. No dock would be required or wanted, but toilets would be very desirable. Presumably the pit will have earlier built sanitary facilities for its workers and possibly these could be adapted and permitted to remain for a further lifespan, if still working well. The site has shelter, more than adequate fresh water and the tree screen would mean little or no visual evidence of a campsite would be detectable from afar.	<p>A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit. A marine-access campsite is not contemplated for the site which is located on privately-held land.</p> <p>Progressive and ongoing reclamation activities will occur throughout all phases of mine development. The Proposed Project will use progressive reclamation of the site that includes ongoing reclamation activities taking place alongside active extraction and pit area around the proposed operations area. Site planning will include landscaping, further design and development of the existing berm along the north edge logging road of the pit area, along with the creation of southern pit containment berm, surface water features, fisheries habitats and vegetation throughout the site consistent with the operational extraction schedule. Ongoing monitoring will be conducted for relevant noise and dust, water quality parameters, and fish, vegetation and wildlife resources. Details regarding the monitoring program (in addition to the reclamation monitoring suggested in the plan) is provided in Volume 3, Part E – Section 17.0 of the EAC Application/EIS.</p>
846	240 - 5	Personal Information Withheld	Coquitlam, BC	The final concern is that transport be permitted only by barge and tug of the stated dimensions. Other aggregate developers elsewhere have suggested deep sea freighters to export valuable aggregate far afield. This would change the application entirely and would not be acceptable here.	Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic. Only tug and barge transport of aggregates is proposed.

The SCRD noise bylaw was considered as part of the assessment.</p>
851	241 - 5	Michael Maser	Gibsons, BC	If you want to drive away tourism and make the north region of Howe Sound unliveable this is the project to do it.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
852	241 - 6	Michael Maser	Gibsons, BC	I live in nearby Gibsons and totally object to this project being approved.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
853	242 - 1	Kathy Lunner	North Vancouver, BC	I am writing to voice my/our strong opposition to the large scale gravel mine that Burnco Rock Products Ltd. is proposing for McNab Creek in Howe Sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
854	242 - 2	Kathy Lunner	North Vancouver, BC	Howe Sound has had a history of industrial activity and been victim to the effects of mining, pulp and paper, etc for many years. Fortunately it now appears that the Sound is revitalising, becoming cleaner, and attracting the return of numerous kinds of wildlife. That together with its world class scenery contributes even further to its attraction, and adds a major asset to Vancouver, its residents and our tourist industry.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>

855	242 - 3	Kathy Lunner	North Vancouver, BC	To take a retrograde step and allow an Alberta based company to set up a crushing/gravel pit in this location is both alarming and questionable at best.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
856	242 - 4	Kathy Lunner	North Vancouver, BC	Gravel pits by their very nature embody noise, airborne pollution and in this instance may have impact on the ocean due to its proximity.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>
857	242 - 5	Kathy Lunner	North Vancouver, BC	Gravel pits by their very nature embody noise, airborne pollution and in this instance may have impact on the ocean due to its proximity.	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>
858	242 - 6	Kathy Lunner	North Vancouver, BC	I believe there is gravel available to concrete manufacturers elsewhere and this proposed pit allows a relative newcomer to compete with the current players already in this field.	<p>BURNCO is a 104-year old family-owned Canadian company with operations in British Columbia, Alberta, Saskatchewan and Texas.</p> <p>BURNCO has over 1,150 employees (180 in BC) and is Canada's largest independent ready mix concrete and aggregate company.</p> <p>BURNCO's BC operations currently transport sand and gravel by barge fro Treat Creek (eas of Powell River) and as far away as Port McNeil on northern Vancouver Island, to existing facilities along the Fraser River in Burnaby and Langley.</p>

859	242 - 7	Kathy Lunner	North Vancouver, BC	<p>We believe an approval of this application would be complete lack of foresight. In summary this is a small business opportunity with the potential for considerable environmental impact and yet with zero upside for both residents and visitors to the Lower Mainland and the Sunshine Coast . Please do not approve Burnco's application.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
860	243 - 1	Julia Thiessen	Howe Sound, BC	<p>As a property owner in Howe Sound I am opposed to the Burnco mining project.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

861	243 - 2	Julia Thiessen	Howe Sound, BC	McNab Creek Estuary provides nutrient rich stream waters that fertilize the ocean and create rich and productive ecologies. It is a delicate ecosystem still recovering from past logging. Approval of the Burnco proposal will return the area to an industrial zone.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
862	243 - 3	Julia Thiessen	Howe Sound, BC	Despite Burnco's proposed mitigation measures, damage to this recovering ecosystem will be unavoidable.	<p>Accepted EA practice in BC and Canada includes the identification of mitigation measures that are technically and economically feasible (i.e., practical) means of preventing or reducing to an acceptable level any potential adverse effect of the proposed project. BCEAO (2013) considers mitigation to be any practical means or measures taken to avoid, minimize, restore on-site, compensate, or offset the potential adverse effects of a project. Compensation means measures taken to further reduce the residual effect, and may include direct physical measures (e.g., habitat enhancement, restoration or creation on, near or away from the project site), or financial mechanisms that have the outcome of reducing the residual effect (e.g., contributions to research, recovery plans, population enhancement programs for endangered species). Offset is defined in the BCMOE's Procedures for Mitigating Impacts on Environmental Values (2012) as means to counteract, or make up for, a residual impact on an environmental component.</p> <p>Potential effects on McNab Creek are being mitigated through avoidance. There are no proposed discharges to or withdrawals from McNab Creek. The pit lake is being designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. Similarly, the size and location of the processing area was selected to avoid identified fish habitat.</p> <p>Examples of mitigation measures to reduce or minimize potential effects are:</p> <ul style="list-style-type: none"> <li>- Sediment and erosion control planning and monitoring the effectiveness of prescribed measures</li> <li>- Restricting clearing of wildlife habitat during breeding and calving periods, bird nesting periods and elk overwintering</li> <li>- Installing nest boxes for Western screech-owls in nearby forest habitat</li> <li>- Maintaining vegetation linkages and buffers to minimize habitat fragmentation and to allow escape routes for large mammals.</li> <li>- Monitoring for marine mammals during impact pile driving activities and maintaining a marine mammal safety zone based on injury noise threshold criteria.</li> </ul> <p>Examples of compensation or offset measure are:</p> <ul style="list-style-type: none"> <li>- Constructing a 790 metre extension of the lower segment of groundwater channel WC2 that will collect surface flow diverted through loss of the upper segment of WC2. This offset will increase the wetted area of the lower segment of WC2.</li> <li>- Establishing 1,250 m2 of new amphibian breeding ponds to offset the loss of existing amphibian habitat.</li> </ul>

	Ref #	Commenter (Name)	Location		
863	243 - 4	Julia Thiessen	Howe Sound, BC	<p>Environmental Concerns:</p> <ul style="list-style-type: none"> <li>Damage to salmon, herring and other marine life</li> </ul>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
864	243 - 5	Julia Thiessen	Howe Sound, BC	<ul style="list-style-type: none"> <li>Noise from gravel crushing affecting wild life</li> </ul>	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>

Issue No.	Source			Public Comment/Issue	Proponent Response

865	243 - 6	Julia Thiessen	Howe Sound, BC	Disruption to the elk, an at risk species	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
866	243 - 7	Julia Thiessen	Howe Sound, BC	Lighting during construction and operation causing further disruption to life in the area	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

867	243 - 8	Julia Thiessen	Howe Sound, BC	Compromised air quality due to emissions	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>
868	243 - 9	Julia Thiessen	Howe Sound, BC	Increased barge traffic in Howe Sound	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>

873	244 - 2	Devin Walchuk	Not Stated	Not only are you greatly effecting a natural habitat, by dredging an estuary, you will be having a major impact on the people that have made McNabb creek home for generations.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
874	244 - 3	Devin Walchuk	Not Stated	Not only are you greatly effecting a natural habitat, by dredging an estuary, you will be having a major impact on the people that have made McNabb creek home for generations.	<p>The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.</p> <p>Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.</p>
875	245 - 1	Donald Townson	Gibsons, BC	I oppose the permitting of an aggregate mine by Burnco in Howe Sound. There is ample cause to deny Burnco's application for a permit to mine, process and ship aggregate in Howe Sound. The Lower Mainland, the Sea to Sky Corridor and the Sunshine Coast do not need a messy, risky -- and absolutely unnecessary -- aggregate mine on their doorstep.	<p>The Proposed Project will provide sand and gravel that will be used to meet the growing demands of the BC marketplace.</p> <p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>
876	245 - 2	Donald Townson	Gibsons, BC	<p>While Burnco's application and the Notices are unclear as to the total amount of aggregate to be mined, processed and shipped, the highest number found in the documentation and displays is 20 million tonnes, spiking to 4 million tonnes a year (the Notices state 16 million tonnes). All of it would originate at the McNab Creek estuary in the heart of Howe Sound.</p> <p>To be barged 35 km into Vancouver, Burnco says the mine's total production, over 20 years, will supply less than one year's aggregate needs of the Lower Mainland. Burnco admits that it has other sources, and will use them.</p>	<p>The Proposed Project is to extract approximately 20 million tonnes of sand and gravel over the 16 year life of the Proposed Project. This will be reflected in an approved EA certificate and mine plan.</p>

	Ref #	Commenter (Name)	Location		
877	245 - 3	Donald Townson	Gibsons, BC	Mined out, Burnco then will abandon the site, leaving a polluted, water-filled quarry. Burnco calls this a recreational lake. Will humans or wildlife be able to drink safely from it? Will there be public access?	<p>A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit. The perimeter of the pit lake will be designed to allow for an escape route for large mammals (See Mitigation Measure M-5.3-55 described in Section 5.3 of the EAC Application/EIS).</p> <p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS. The pit lake will be predominantly groundwater fed. No water quality parameters are predicted to exceed applicable Water Quality Guidelines. Although the pit lake will be located on property owned by BURNCO and no public access or recreational use of the pit lake is proposed, the Public Health Assessment (Section 9.1 of the EAC Application/EIS) concludes that there would be no significant risk to recreational users.</p>
878	245 - 4	Donald Townson	Gibsons, BC	Howe Sound is beautiful, environmentally sensitive, and worthy of protection. Anywhere else it would be national park. An unnecessary aggregate mine and processing plant at its heart is pointless.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
879	245 - 5	Donald Townson	Gibsons, BC	Howe Sound is beautiful, environmentally sensitive, and worthy of protection. Anywhere else it would be national park. An unnecessary aggregate mine and processing plant at its heart is pointless.	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
880	245 - 6	Donald Townson	Gibsons, BC	Burnco's application to scoop, dredge and process in Howe Sound fails to provide reasonable assurance that its operation will not cause serious environmental, heritage, health, social and economic damage.	<p>The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.</p> <p>Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.</p>

	Ref #	Commenter (Name)	Location		
881	245 - 7	Donald Townson	Gibsons, BC	Burnco implies that the history of more than 100 years of industrial abuse to the land, water, air and wildlife by others in Howe Sound is an important historical precedent and therefore is justification for further industrial activity. This is a specious argument, of course, and it is very disturbing that the applicant feels justified in advancing it. Because it is 2016.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
882	245 - 8	Donald Townson	Gibsons, BC	Burnco refers to historical precedent in its forced, second choice of a riskier shipping route through narrow Thornbrough Channel, past the YMCA Elphinstone youth camp and cutting across the Langdale ferry routes. Its first choice for a shipping route, safer and shorter, but in view from the Sea to Sky highway, Lions Bay and West Vancouver, attracted strong public opposition.	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
883	245 - 9	Donald Townson	Gibsons, BC	Burnco refers to historical precedent in its forced, second choice of a riskier shipping route through narrow Thornbrough Channel, past the YMCA Elphinstone youth camp and cutting across the Langdale ferry routes. Its first choice for a shipping route, safer and shorter, but in view from the Sea to Sky highway, Lions Bay and West Vancouver, attracted strong public opposition.	Ramillies Channel is the preferred route. Thornbrough Channel is proposed only as an alternate, poor weather route.

884	245 - 10	Donald Townson	Gibsons, BC	Burnco refers to historical precedent in its forced, second choice of a riskier shipping route through narrow Thornbrough Channel, past the YMCA Elphinstone youth camp and cutting across the Langdale ferry routes. Its first choice for a shipping route, safer and shorter, but in view from the Sea to Sky highway, Lions Bay and West Vancouver, attracted strong public opposition.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
885	245 - 11	Donald Townson	Gibsons, BC	Burnco has not addressed adequately some very important environmental effects: for example, how will it avoid, negate or mitigate the risk from sediment from the operation to the rare Glass Sponge Reefs in Howe Sound? The proposed mine is the biggest threat.	<p>A detailed assessment of potential effects on marine resources, including marine benthic communities, is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>Glass sponges are a group of filter feeding organisms which can form large sponge reefs that provide habitat for other marine invertebrate and fish species. Glass sponges in Howe Sound live at depths as shallow as -20 m (chart datum). BURNCO has included glass sponges in the assessment of potential effects on marine resources.</p> <p>Although no glass sponges were observed during the dive and towed video surveys of the Proposed Project area, foreshore and sub-tidal nearshore conducted for the assessment, their known occurrences throughout Howe Sound have been documented. The marine footprint of the Proposed Project does not overlap with any known or mapped locations of glass sponges or glass sponge reefs occurrences.</p> <p>Potential residual effects of propeller scour and aggregate spills on glass sponges were assessed. Propeller wash velocities at the depths at which glass sponges occur are predicted to be within the same magnitude as tidal currents present at this depth. With the application of proposed mitigation, the likelihood of an aggregate spill adversely affecting glass sponge colonies is low. The significance of potential residual effects on marine benthic communities, including glass sponges, were determined to be negligible or not significant.</p>

886	245 - 12	Donald Townson	Gibsons, BC	Burnco has been unconvincing in its attempts to address the legitimate concerns of the provincial and government and the public. For example, its claim that the 14 or so full-time equivalent jobs at the mine site will provide significant economic benefits is ridiculous. But the threat it poses to the environment, tourism and recreation is not.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
887	245 - 13	Donald Townson	Gibsons, BC	Burnco has been unconvincing in its attempts to address the legitimate concerns of the provincial and government and the public. For example, its claim that the 14 or so full-time equivalent jobs at the mine site will provide significant economic benefits is ridiculous. But the threat it poses to the environment, tourism and recreation is not.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
888	245 - 14	Donald Townson	Gibsons, BC	Of course this mine should not be approved at any level, particularly before a holistic regional plan for the entire Howe Sound area has been put in place that takes into account Howe Sound's industrial, commercial, residential and recreational value, both existing and potential.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

889	246 - 1	Lynne Zimmerman	McNab Creek, BC	I am writing today in response to Burnco application for a gravel pit at McNabb Creek estuary. As a long time resident of McNab Creek I must express my opposition to this project. I believe our Polite questions to Burnco were taken as cooperation. Contrary to what Burnco has suggested we are not in favour of a gravel pit. Reading through their application they have many of their fax incorrect. Too many to list, but I will touch base on a few.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
890	246 - 2	Lynne Zimmerman	McNab Creek, BC	The land that our community sits on was purchased August 6, 1968. The sunshine coast regional district granted residential zoning for this area. One of the original developers can Townson is still a member of our community. In the early 70s he began bringing cabins up by barge from Richmond and developed our community. Cabins at that time were selling for \$180,000. Since Burnco's intentions were made public seven years ago, property values have dropped, and been stagnant. No one wants to invest across from an area where proposed gravel pit may be approved. While the rest of Vancouver and the lower mainland have experienced huge increases in their residential values hours continues to drop and be of no interest to people looking for recreational enjoyment.	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
891	246 - 3	Lynne Zimmerman	McNab Creek, BC	I would like to express what this community has meant to us. This community because of its remoteness and it's lack of power and services, has been a blessing in disguise's. Many of the residents have been at McNabb for many years we have spent our summers there each year, with our children, and now grandchildren. We enjoy a way of life there, without technology out of TVs, phones, and Electricity, that is hard to describe. It is a place where there is conversation at dinner, games to be played on the beach, fishing and hiking and swimming. Where we must help each other because there is no one else to call. We have become a community of very close neighbors. Our community and our way of life that we have cherished over the last 40 years is at risk of coming to an end.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

892	246 - 4	Lynne Zimmerman	McNab Creek, BC	<p>SCRD Mission Statement; (sunshine coast regional district) The SCRDR Plays a variety of roles – planner, protector, provider, and community builder – in collaboration with volunteers, other service providers, community groups, and partners to provide A system of highquality and accessible parks, trails, beach access, facilities, recreational services, volunteerism, and special events in a manner that is integrated, thoughtfully planned, responsive, well-maintained, and fiscally responsible. To benefit the health and vitality of all individuals, families, communities,and the region as a whole. The sunshine coast regional district executive summary states; "it's population of 30,000 a full-time residence and a segment of parttime residence value a healthy active lifestyle and embrace a variety of recreational opportunities parks and recreation facilities, services, special events, and community engagement opportunities help build stronger communities by providing enjoyment and social connections and encouraging physical activity among people of all ages and ability levels. "</p>	<p>The proposed Project lies within Electoral Area F of the Sunshine Coast Regional District. While there are three OCPs in Electoral Area F, none of them overlap with the local study area (LSA). Regional zoning for the LSA is discussed in Volume 2, Part B, Section 6 of the EAC Application/EIS.</p> <p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</p> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
893	246 - 5	Lynne Zimmerman	McNab Creek, BC	<p>This proposed Burnco gravel pit will be 150 feet deep in the middle of one of the last estuaries, and the only beach in the Howe Sound.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
894	246 - 6	Lynne Zimmerman	McNab Creek, BC	<p>It will adversely affect thousands of people at the yacht clubs, kids camps and most directly our community.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>

895	246 - 7	Lynne Zimmerman	McNab Creek, BC	It is directly across the river from our residences (450 feet) and the noise levels they have proposed are unacceptable and unrealistic. There are huge discrepancies in their testing of predictive noise levels.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>
896	246 - 8	Lynne Zimmerman	McNab Creek, BC	The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
898	246 - 10	Lynne Zimmerman	McNab Creek, BC	The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt.	BURNCO will establish a Community Advisory Group (CAG) to provide a forum for interested stakeholders to review, discuss and make recommendations. CAG terms of reference and meeting minutes will be made available online.
899	246 - 11	Lynne Zimmerman	McNab Creek, BC	The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt.	<p>BURNCO has proposed a McNab Community Enhancement Fund (CEF) that would consist of money set aside each year of operation, based on output, to enhance the McNab community through targeted funding on projects throughout the region. Funding of projects would be given priority by BURNCO's Management Committee based on a number of criteria that would include:</p> <ul style="list-style-type: none"> <li>- Mitigation of project effects</li> <li>- Bringing amenities to our nearest neighbours</li> <li>- Supporting non-political groups actively improving Howe Sound through cleanup efforts, habitat improvements, etc.</li> <li>- Children's camps</li> <li>- Local united Way or similar organizations providing funding to community programs</li> <li>- Public amenities</li> </ul> <p>The CEF is a funding mechanism which may be replaced by a Sunshine Coast Regional District fee at some future date. If such a fee were introduced, then the CEF would cease.</p>
900	246 - 12	Lynne Zimmerman	McNab Creek, BC	Hearing from Burrard yacht club, ( one of three yacht clubs on Gambier island) stating their club has spent roughly \$250,000 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. I can only imagine the losses when you add all the communities together, that will no longer want to spend their recreational time in a noisy industrial area. The economic impact on local businesses in the Howe Sound will be largely felt.	<p>The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Considering these factors, the modelled Project contributions to noise levels at NR4 (Eakins Point, inside the LSA and across the water from the Project) were below baseline and resulted in Negligible-Not Significant effects.</p> <p>A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.</p>

901	246 - 13	Lynne Zimmerman	McNab Creek, BC	Hearing from Burrard yacht club, ( one of three yacht clubs on Gambier island) stating their club has spent roughly \$250,000 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. I can only imagine the losses when you add all the communities together, that will no longer want to spend their recreational time in a noisy industrial area. The economic impact on local businesses in the Howe Sound will be largely felt.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
902	246 - 14	Lynne Zimmerman	McNab Creek, BC	The McNab Creek estuary remains both rare and productive. It is a living breathing science project directly opposite our community, and we use this remote and Pristine area to educate our children/grandchildren the value of conservation, love and respect of nature, for their children and all generations to come.	A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.  An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.  The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.  The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.
903	246 - 15	Lynne Zimmerman	McNab Creek, BC	We at McNab Creek community have paid our taxes for 40 years towards schools, libraries, infrastructure, and services that we do not have in our area. We ask that you consider, our community, and our contribution over many years of taxes paid. We ask that you recognize how this directly contradicts the sunshine coast mission statement. We also ask that you do not turn a slow and struggling recovery of our beautiful Howe Sound back to the industrial past.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.

Regional zoning for the LSA is discussed in Volume 2, Part B, Section 6 of the EAC Application/EIS.</p> <p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</p> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
908	247 - 5	Lynne Zimmerman	McNab Creek, BC	<p>This proposed Burnco gravel pit will be 150 feet deep in the middle of one of the last estuaries, and the only beach in the Howe Sound.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
909	247 - 6	Lynne Zimmerman	McNab Creek, BC	<p>It will adversely affect thousands of people at the yacht clubs, kids camps and most directly our community.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>

	Ref #	Commenter (Name)	Location		
910	247 - 7	Lynne Zimmerman	McNab Creek, BC	It is directly across the river from our residences (450 feet) and the noise levels they have proposed are unacceptable and unrealistic. There are huge discrepancies in their testing of predictive noise levels.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>
911	247 - 8	Lynne Zimmerman	McNab Creek, BC	The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>

912	247 - 9	Lynne Zimmerman	McNab Creek, BC	The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt.	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
913	247 - 10	Lynne Zimmerman	McNab Creek, BC	The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt.	BURNCO will establish a Community Advisory Group (CAG) to provide a forum for interested stakeholders to review, discuss and make recommendations. CAG terms of reference and meeting minutes will be made available online.
914	247 - 11	Lynne Zimmerman	McNab Creek, BC	The only people we see that stand to gain by this, is Burnco. The loss of property values at McNab and Gambier island as well as the social and economic losses for the towns and businesses in tourism dollars, will be largely felt.	<p>BURNCO has proposed a McNab Community Enhancement Fund (CEF) that would consist of money set aside each year of operation, based on output, to enhance the McNab community through targeted funding on projects throughout the region. Funding of projects would be given priority by BURNCO's Management Committee based on a number of criteria that would include:</p> <ul style="list-style-type: none"> <li>- Mitigation of project effects</li> <li>- Bringing amenities to our nearest neighbours</li> <li>- Supporting non-political groups actively improving Howe Sound through cleanup efforts, habitat improvements, etc.</li> <li>- Children's camps</li> <li>- Local united Way or similar organizations providing funding to community programs</li> <li>- Public amenities</li> </ul> <p>The CEF is a funding mechanism which may be replaced by a Sunshine Coast Regional District fee at some future date. If such a fee were introduced, then the CEF would cease.</p>
915	247 - 12	Lynne Zimmerman	McNab Creek, BC	Hearing from Burrard yacht club, ( one of three yacht clubs on Gambier island) stating their club has spent roughly \$250,000 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. I can only imagine the losses when you add all the communities together, that will no longer want to spend their recreational time in a noisy industrial area. The economic impact on local businesses in the Howe Sound will be largely felt.	<p>The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Considering these factors, the modelled Project contributions to noise levels at NR4 (Eakins Point, inside the LSA and across the water from the Project) were below baseline and resulted in Negligible-Not Significant effects.</p> <p>A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.</p>

916	247 - 13	Lynne Zimmerman	McNab Creek, BC	Hearing from Burrard yacht club, ( one of three yacht clubs on Gambier island) stating their club has spent roughly \$250,000 in Gibsons and Pender Harbour on fuel, groceries, restaurants, etc. I can only imagine the losses when you add all the communities together, that will no longer want to spend their recreational time in a noisy industrial area. The economic impact on local businesses in the Howe Sound will be largely felt.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
917	247 - 14	Lynne Zimmerman	McNab Creek, BC	The McNab Creek estuary remains both rare and productive. It is a living breathing science project directly opposite our community, and we use this remote and Pristine area to educate our children/grandchildren the value of conservation, love and respect of nature, for their children and all generations to come.	A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.  An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.  The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.  The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.
918	247 - 15	Lynne Zimmerman	McNab Creek, BC	We at McNab Creek community have paid our taxes for 40 years towards schools, libraries, infrastructure, and services that we do not have in our area. We ask that you consider, our community, and our contribution over many years of taxes paid. We ask that you recognize how this directly contradicts the sunshine coast mission statement. We also ask that you do not turn a slow and struggling recovery of our beautiful Howe Sound back to the industrial past.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
919	248 - 1	Jackie Rohan	Not Stated	I hope the BURNCO Aggregate mine environmental assessment process takes my concerns into account. I attended an information session in Gibsons, and I have read many documents pertaining to this application. I am a Public Health Nurse; I work both on the Sunshine Coast and on the North Shore.	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

Issue No.	Source			Public Comment/Issue	Proponent Response

920	248 - 2	Jackie Rohan	Not Stated	My family vacations in Howe Sound near the mine site; my children have attended youth camps that will be affected by the mine. In due course my grandchildren will attend these youth camps.	A detailed assessment of potential recreation effects - including youth camps - are considered in Volume 2, Part B – Section 7.3 of the EAC Application/EIS. Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
921	248 - 3	Jackie Rohan	Not Stated	Howe Sound offers my urban family the experience of being close to nature that is unique, not only in Canada , but in the world. We cannot understand why such a mine, which will detract from their experience over the next 20 years, and in some aspects, forever, would be considered in Howe Sound.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
922	248 - 4	Jackie Rohan	Not Stated	The mine is not needed and there are many other sources of aggregate in B.C.	The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.  Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by: - Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC; - Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and - Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.  The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.
923	248 - 5	Jackie Rohan	Not Stated	The mine is not needed and there are many other sources of aggregate in B.C.	Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.
924	248 - 6	Jackie Rohan	Not Stated	The firm that is applying for the permit is 100 years old. It's mindset is obviously stuck in 1916, when industry was allowed to wreck havoc in Howe Sound. Please do not approve this application.	BURNCO is a 104-year old family-owned Canadian company with operations in British Columbia, Alberta, Saskatchewan and Texas.  BURNCO has over 1,150 employees (180 in BC) and is Canada's largest independent ready mix concrete and aggregate company.  BURNCO's BC operations currently transport sand and gravel by barge fro Treat Creek (eas of Powell River) and as far away as Port McNeil on northern Vancouver Island, to existing facilities along the Fraser River in Burnaby and Langley.

925	249 - 1	Tiffany Robinson	Gambier Island, BC	As a Gambier Island resident, I am writing to express my serious concerns about the proposed Burnco open pit mine operation at McNab Creek.	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
926	249 - 2	Tiffany Robinson	Gambier Island, BC	Howe Sound is one of the most beautiful fjords in the world and a BC landmark on the Sea to Sky corridor. Howe Sound is the home to a great variety of mammals, fish, frogs, rare birds and invertebrates. It supports jobs in the local economy, especially tourism which has a significant ripple effect through the region's economy, and brings pleasure to thousands of locals and tourists every year.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area. BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
927	249 - 3	Tiffany Robinson	Gambier Island, BC	We all cherish and celebrate the recovery of Howe Sound after decades of toxic pollution from heavy industry. BC taxpayers paid millions to clean up the Britannia mine in Howe Sound and now finally those actions, along with other conservation efforts, are paying off with the return of fish stocks, dolphins, orcas, whales and a proliferation of bald eagles and other wildlife.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
928	249 - 4	Tiffany Robinson	Gambier Island, BC	Please bring to an end the proposed Burnco open pit mine before massive economic harm is caused to thousands of local residents and businesses including our film and tourism industries as well as countless dollars have been spent by both BC and Federal regulators evaluating whether the environmental destruction of a portion of this sensitive ecosystem can be "mitigated".	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
929	249 - 5	Tiffany Robinson	Gambier Island, BC	We support the creation of a long term comprehensive land and water use plan for economic and social activities in the region that are compatible with sustainable uses of the Howe Sound.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.

930	249 - 6	Tiffany Robinson	Gambier Island, BC	We ask you to stop this ill-advised project that will destroy a portion of this amazing natural resource, all for the sake of the short term profits of a mining company.	BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. The Sustainable Development Framework for the proposed Project is presented in Section 2.5.4.2 of the EAC Application/EIS.
931	250 - 1	Personal Information Withheld	Lions Bay, BC	I concur with all the overwhelming opposition to this project noted on this EA comment page. Certainly, this project cannot continue given all of the opposition and problematic concerns listed here.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
932	251 - 1	Spider Robinson	Gambier Island, BC	I strongly oppose Burnco's proposed destruction of the McNab Estuary and its conversion from an environmental treasure to an active mining operation, in a rural residential region. I have lived near active mines, and I would not wish that on you or on anyone in government, unless Tronald Dump wins. Please return the favor. Don't sell us out to profiteers for dollars. We remember things like that a LONG time.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
933	252 - 1	Ruth Simons	Howe Sound, BC	<p>Visual Impacts</p> <p>The visual impacts overlook the views from the property owners directly across from the mine at higher elevations. The consultant said they did not consider the views from these homes due to the property being private which limited their access. It would be in the interest of these property owners to allow access to the consultants in order to know what the visual impact would be. The attached photo was taken from one of the lots and it appears they would see the operations area. More studies should be done as changing this view could have significant impact on property values.</p> <p>Another comment I heard about the visuals – the lights at the project site and barge loading were being compared to the lights at Howe Sound Pulp and Paper. The residents at McNab do not see Howe Sound Pulp and Paper but the story boards implied they do. For the McNab Strata residents, this project impacts their current night time views.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The assessment acknowledges that the residents of the McNab Estates Strata would be most affected by the potential visual impacts due to their close proximity to the Proposed Project. The McNab Strata viewpoint was taken from the end of the breakwater where the view would be unobstructed; this publically accessible location would be experienced by residents accessing the dock at the McNab Estates Strata.</p> <p>The lighting assessment indicated residential receptors at the Strata are located in a dark setting with existing lighting visible from adjacent industrial land use. The assessment of viewing locations and/or viewing conditions is limited to those locations that represent viewing opportunities that currently exists are may be certain or reasonably foreseeable.</p> <p>BURNCO has committed to establishing a mutually agreeable mechanism for engaging with the McNab Creek Strata owners regarding issues of benefit and concern.</p>
934	253 - 1	Lois Neu	North Vancouver, BC	Please do not allow the Bunco Aggregate Project to go forward!	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

935	253 - 2	Lois Neu	North Vancouver, BC	I am a keen outdoors person and recreational user of this area. I cannot imagine trying to paddle board or kayak in the Douglas Bay or across the water, while dodging barges and listening to the hammer hammer hammer of rock crushing up the valley.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
936	253 - 3	Lois Neu	North Vancouver, BC	I am a keen outdoors person and recreational user of this area. I cannot imagine trying to paddle board or kayak in the Douglas Bay or across the water, while dodging barges and listening to the hammer hammer hammer of rock crushing up the valley.	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
937	253 - 4	Lois Neu	North Vancouver, BC	I am a keen outdoors person and recreational user of this area. I cannot imagine trying to paddle board or kayak in the Douglas Bay or across the water, while dodging barges and listening to the hammer hammer hammer of rock crushing up the valley.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>
938	253 - 5	Lois Neu	North Vancouver, BC	Human progress can be measured in many ways, one of which should be preserving Howe Sound for its public recreational usage and beauty. Please prioritize land and wilderness preservation in our province and in particular in Howe Sound! Thank you.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

950	256 - 1	Jessica Nelson	Whistler, BC	I am not supportive of the Burnco Mine project and am concerned regarding the risks to the McNab Creek Estuary.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
951	256 - 2	Jessica Nelson	Whistler, BC	Please do NOT approve this project.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
952	257 - 1	Patrick Walsh	Aurora, ON	If you've ever been to beautiful Howe Sound, you'll know how ecologically, geographically and culturally significant it is. The risks to the environment alone are not worth the benefits of this project, and the blight it will make on the landscape is decidedly not conducive to beautiful B.C. How this even got this far is mind-boggling. Please stop it.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
953	258 - 1	Sheila Kinnear	Gibsons, BC	<p>I've frequented Thunderbird Yacht Club's outstation at Ekins Point since 1981 and have spent many hours contemplating the beauty of the valley across the way.</p> <p>A consultant hired by Burnco tried to assure me that I would not be able to hear anything from</p>	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

954	258 - 2	Sheila Kinnear	Gibsons, BC	A consultant hired by Burnco tried to assure me that I would not be able to hear anything from Burnco's operation. I simply don't believe him.	<p>BURNCO engaged an independent and reputable team of qualified scientists and EA practitioners from Golder Associates Ltd. to conduct the required studies and prepare and environmental assessment for the Proposed Project. Golder is a global, employee-owned company with over 50 years of experience. They have over 400 BC-based staff involved in environmental assessment and related activities. All of Golder's work undergoes a high level of quality control and technical review. In addition, some of Golder's work for this project – specifically the groundwater modelling of the proposed mine plan – was subject to third-party technical review prior to being relied upon for the assessment.</p> <p>The qualifications and experience of the EA Project Team is presented in Section 2.1.1. of the EAC Application/EIS. Their work will be subject to further technical review through the ongoing EA review process.</p> <p>Many of the studies undertaken and changes made to the Proposed Project were a direct result of our consultants findings and recommendations.</p> <p>BURNCO is a 104-year old company that has built a reputation as a responsible resource developer. We depend upon independent assessments such as those conducted for the EA to help ensure we protect our reputation and don't put our business at risk.</p>
955	258 - 3	Sheila Kinnear	Gibsons, BC	A consultant hired by Burnco tried to assure me that I would not be able to hear anything from Burnco's operation. I simply don't believe him.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>
956	258 - 4	Sheila Kinnear	Gibsons, BC	A consultant hired by Burnco tried to assure me that I would not be able to hear anything from Burnco's operation. I simply don't believe him.	Noise monitoring locations will be included as part of the Noise Management Plan. Stations will be located to monitor noise levels at the McNab Strata and at Ekins Point on Gambier Island.
957	259 - 1	Mike	Muskoka, ON	Before I moved back to Ontario I spent many years on the west coast and have visited Howe Sound many times. I think it is a travesty that there is even a chance that an area filled with such serene beauty is being threatened by a big corporation like Burnco. With so many potential negative environmental impacts and little - if any - positive impacts for the community of Howe Sound it is a wonder that this project is even being considered.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. 959	260 - 1	Dennise Dombroski	Gibsons, BC	<p>This project seems to exist solely for the benefit of Burnco. There is no apparent benefit to the neighbouring towns, and no long term benefit to the citizens of BC. 12 jobs, which may or may not be filled by local residents is not enough to justify the inevitable loss of tourism opportunities of this ecological gem, not to mention the destruction of the recently rejuvenated wildlife mecca. There must be more thought put into the long term benefits. I am tired of seeing BC's resources being squandered for short term minimal gain.</p>	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. 969	264 - 1	Personal Information Withheld	Squamish, BC	Stop destroying our natural habitats,are their not enough gravel pits already!!	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>
970	264 - 2	Personal Information Withheld	Squamish, BC	Stop destroying our natural habitats,are their not enough gravel pits already!!	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
971	265 - 1	Mark Evans	Gibsons, BC	It is understandable to extract raw resources, especially when they are easily transported to a large centre. However, this area has recently recovered from extensive logging and is now to be the focus of soil extraction. There are many areas on the coast where soil extraction and logging activities have left equipment and dilapidated infrastructure rusting on the shore.6 Remediation of these areas is now the tax payers responsibility. If soil extraction is allowed to proceed bonds must be posted to ensure that should the company face insolvency reclamation can be completed.	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>

980	269 - 3	Personal Information Withheld	North Vancouver, BC	However, it remains a threat to the ecology and to our current and future quiet enjoyment of one of the most beautiful stretches of coast line in our Province.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
981	269 - 4	Personal Information Withheld	North Vancouver, BC	A review of the present submissions should make it self evident there are many concerned individuals who do not back this project and unless there are extremely valid reasons to the contrary, most responsible governments would respond to this sort of public discourse in a positive and supportive manner. Please refuse to approve Burnco's application and let this part of Howe Sound be conserved for all to enjoy now and for generations to follow.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
982	270 - 1	Tom Franklin	Squamish, BC	As frequent boater to the area I am appalled at this proposal. The only truly sandy beach on Howe Sound and so lose to Vancouver. Huge fish and wildlife values. Should be a law against this	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. 985	272 - 1	Personal Information Withheld	Vancouver, BC	<p>It is increasingly rare to find unspoiled nature in close proximity to a major urban centre. There is massive value in such an amenity. I ask that government not underestimate this value which is recognized by both current and future generations. Howe Sound is, in part, such an amenity. Increasing commercial and industrial land uses in the Sound will in most cases be very poor public policy. In the inevitable exercise of balancing competing interests, be mindful of what a rare treasure Howe Sound is.</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. 988	273 - 3	Sarah Valentine	Pemberton, BC	I am concerned that for only 12 mere jobs, the risk to our environment of the Howe Sound, let alone the livelihood of the neighbouring communities, such as the loss of quality of life from the noise reverberating off the mountains surrounding the site and the ocean and from the industrial activity and the decline in property values and natural capital values, outweigh the job potential.	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
989	273 - 4	Sarah Valentine	Pemberton, BC	Also, the Howe Sound watersheds provide an estimated annual value of \$800 million to \$4.7 billion in ecosystem services. The effects on marine life, wildlife, fish and recovering Howe Sound cannot be accurately predetermined.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
990	273 - 5	Sarah Valentine	Pemberton, BC	Also of concern is the rezoning from current rural RU-2 to industrial use. Rezoning increases industrial land use in Howe Sound not protection, and can adversely affect the biodiversity and ecological value of the estuary.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

998	276 - 4	Personal Information Withheld	Furry Creek, BC	Noise pollution, estuary destruction, wildlife destruction, marine life destruction, natural beautiful area destruction. What more need one say?	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
999	276 - 5	Personal Information Withheld	Furry Creek, BC	Noise pollution, estuary destruction, wildlife destruction, marine life destruction, natural beautiful area destruction. What more need one say?	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1000	276 - 6	Personal Information Withheld	Furry Creek, BC	Is there not some other place along the thousands of miles of coastline or islands where such an operation could be better placed????	<p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>
1001	276 - 7	Personal Information Withheld	Furry Creek, BC	Howe Sound needs to continue mending from its prior mishandling by man. This project will do nothing to mend the Sound but on the contrary will exacerbate damage to the fragile eco system.	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>
1002	277 - 1	Personal Information Withheld	Nanoose Bay, BC	Stop this Insane Popen out mine Utterly silly	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
1003	278 - 1	Ray and Elspeth Bradbury	West Vancouver, BC	We are absolutely opposed to the proposed Burnco Aggregate Mine Project on Howe Sound, BC.	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

Issue No.	Source			Public Comment/Issue	Proponent Response
	Ref #	Commenter (Name)	Location		
1004	278 - 2	Ray and Elspeth Bradbury	West Vancouver, BC	We are disgusted with the broken environmental assessment process which automatically grants approval without proper consultation with residents or with First Nations.	The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.  Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.
1005	278 - 3	Ray and Elspeth Bradbury	West Vancouver, BC	As residents of the Howe Sound area this catastrophic mine proposal would impact us directly, both as an environmental stupidity of a disaster and in the increased heavy traffic out of the sound.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1006	278 - 4	Ray and Elspeth Bradbury	West Vancouver, BC	Howe Sound, which people and governments have worked hard to clean up after the Britannia Mine mess, should be declared a national Park and a UNESCO biosphere treasure.  The Sound is no place for LNG plants or heavy extraction and pollution such as the Burnco outrage.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
1007	279 - 1	Harold Stirland	Courtenay, BC	The McNab Creek flats are a most unique and valuable component of the natural environment of Howe Sound, now under threat from industry.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.

1008	279 - 2	Harold Stirland	Courtenay, BC	I visited this area several times, and have seen for myself that a place of such rare qualities must not be destroyed for profit or jobs. Please recognize that the public interest should rule, in this case.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
1009	280 - 1	Alexander	Briggs, AB	I am opposed to the development of this gravel mine in the McNab creek estuary.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1010	280 - 2	Alexander	Briggs, AB	I am opposed to the development of this gravel mine in the McNab creek estuary.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1011	280 - 3	Alexander	Briggs, AB	This environment should be preserved as it is sensitive and fragile wildlife habitat.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
1012	281 - 1	Personal Information Withheld	Lions Bay, BC	I think it is stupid to put this mine in Howe Sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

Issue No.	Source			Public Comment/Issue	Proponent Response
	Ref #	Commenter (Name)	Location		
1013	281 - 2	Personal Information Withheld	Lions Bay, BC	This whole area should be protected for the enjoyment of the huge population of Vancouver just around the corner from Horseshoe Bay.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
1014	281 - 3	Personal Information Withheld	Lions Bay, BC	I do not like people making these sort of decisions who have no attachment to this or any other area.	The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.  Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.
1015	282 - 1	Personal Information Withheld	Roberts Creek, BC	The fact that there is even an option for a company to mine anything in the sensitive over used eco system of Howe sound is completely ignorant .I am against this mine proposal and any caring rational person would be .	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1016	283 - 1	Personal Information Withheld	Gibsons, BC	Simply, this is like the stick that breaks the camels back. It's just one more 'development'[stick]. But it will prove to be a messy development at the cost of Howe Sound's recovery from years of pollution, chemical, noise, debris from operations.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.

1017	283 - 2	Personal Information Withheld	Gibsons, BC	Noise carries a great distance and a few trees will not stop that sound travel.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>
1018	283 - 3	Personal Information Withheld	Gibsons, BC	Granted Port Mellon is nearby but do we need to keep saying that since one is there another is OK. I think this development will prove to be short sighted and destructive. Stop it.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1019	284 - 1	Concerned Resident	Squamish, BC	<p>As past Director of the Vancouver Aquarium put it "If Howe Sound were in any other part of the world, it would be a great national park"</p> <p>We need to protect our lands, our waters and our resources, selling off our land, water &amp; resources for profit is not saving our world for our children.</p>	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
1020	284 - 2	Concerned Resident	Squamish, BC	The mine will have an impact on the economic potential of the Howe Sound area. There is considerable potential in Howe Sound to continue to grow the tourism industry with significant economic multipliers that would accrue to the local economy. A mine is not going to add to the beauty of the area.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
1021	284 - 3	Concerned Resident	Squamish, BC	The proposed mine developer, Burnco, filed a judicial review application against DFO in BC Supreme Court to 'strong arm' the DFO to allow them to proceed to an environmental review. The DFO have since agreed to that review with serious concerns as "the project presents a high risk to Salmon and Salmon habitat".	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO's involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>

1028	284 - 10	Concerned Resident	Squamish, BC	<p>The noise from the gravel crushing facility and loading of barges will be significant. It will have a negative impact on the enjoyment of the area by boaters, kayakers, fishermen, tourists and other in Howe Sound. The mine developer has stated at meetings that if the demand is there, they want to run the mining and crushing facilities 24/7, 365 days a year.</p> <p>Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
1029	284 - 11	Concerned Resident	Squamish, BC	<p>The noise from the gravel crushing facility and loading of barges will be significant. It will have a negative impact on the enjoyment of the area by boaters, kayakers, fishermen, tourists and other in Howe Sound. The mine developer has stated at meetings that if the demand is there, they want to run the mining and crushing facilities 24/7, 365 days a year.</p> <p>Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.</p>	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>

1030	284 - 12	Concerned Resident	Squamish, BC	<p>The noise from the gravel crushing facility and loading of barges will be significant. It will have a negative impact on the enjoyment of the area by boaters, kayakers, fishermen, tourists and other in Howe Sound. The mine developer has stated at meetings that if the demand is there, they want to run the mining and crushing facilities 24/7, 365 days a year.</p> <p>Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
1031	284 - 13	Concerned Resident	Squamish, BC	<p>The noise from the gravel crushing facility and loading of barges will be significant. It will have a negative impact on the enjoyment of the area by boaters, kayakers, fishermen, tourists and other in Howe Sound. 1035	284 - 17	Concerned Resident	Squamish, BC	Howe Sound is only now showing encouraging signs of environmental recovery after decades of industrial misuse. Should we now allow a reindustrialization of the area?	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
1036	284 - 18	Concerned Resident	Squamish, BC	Why would anyone develop a gravel mine in Vancouver’s ocean playground, an area of outstanding natural beauty? This is where an ever growing city comes to sail, dive, kayak, fish, camp and hike. Tourists flock from all over the world to see “SuperNatural, British Columbia”, how would a gravel pit look in the tourism advertising?	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1037	285 - 1	Fern Walker	Sechelt, BC	The environment comes first. Nature must be preserved not destroyed. The estuary, and salmon runs are a top priority. The land and waters are just starting to come back to their natural state for sea and wildlife.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. 1058	288 - 8	Reg Allen	West Vancouver, BC	We urge the government to deny approval to a project of this nature. It has little economic upside outside of Burnco's profitability and yet has so much impact and risk to this scenic and natural environment on our doorstep.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
1059	288 - 9	Reg Allen	West Vancouver, BC	In summary a regional plan for the development of Howe Sound is crucial, it would enable criteria and guide lines for any proposed activities and avoid long expensive processes such as we are involved in at the moment.	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
1060	289 - 1	Jo Phillips	Sooke, BC	No mines in McNabb Creek in Howe Sound. Business is not the most important thing in the world. Preserving the natural ecosystem that nurtures us is crucial to all of our survival. This is a crucial habitat. Please actually assess the environment which is the task we have trusted you with.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1061	290 - 1	Ken McMaster	Surrey, BC	I have summered on Anvil Island for over fifty years now and have in recent years witnessed the return of dolphin and orca populations as a result of new regulations that have improved the water quality in Howe Sound. I have fished off McNabb Creek for Pink Salmon. I think it would be a tragedy to allow the Bunco Aggregate Mine Project to go ahead.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
1062	290 - 2	Ken McMaster	Surrey, BC	I have summered on Anvil Island for over fifty years now and have in recent years witnessed the return of dolphin and orca populations as a result of new regulations that have improved the water quality in Howe Sound. I have fished off McNabb Creek for Pink Salmon. I think it would be a tragedy to allow the Bunco Aggregate Mine Project to go ahead.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1063	290 - 3	Ken McMaster	Surrey, BC	I urge you to deny this request.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1064	291 - 1	Lea Bancroft	North Vancouver, BC	<p>Hydrology – McNab Valley Environmental Watershed Sustainability</p> <p>With all due respect there does not seem to be a clear logical understanding of how the tidal estuary water flows will be maintained while balancing the pit/pond level requirements over the life of the project or into the future.</p> <p>The proponent’s initial proposal was to form a trench/creek above the road on the west side of the property that would collect both surface and subsurface water draining from the west side of the valley. This collected water flow was then to be controlled via overflow weirs to satisfy the hydraulic requirements of both the pit/pond and the tidal estuary.</p> <p>Following the initial Public Open House session wherein we asked how the pit/pond replenishment requirements of roughly 230,000 US gallons per day would be met it now appears that the previous scheme has been abandoned. At the most recent Public Open House it was stated by Golder’s hydrologist that the water coming off the west side of the valley is both insufficient in volume and of insufficient quality to meet the project water requirements. The level of the pit/pond will now be maintained by subsurface water flows coming directly down out of the McNab valley that are supposedly far in excess of the pit/pond requirements. The remaining subsurface water flows are then supposed to flow under/through the berm/dam structure (purple lined area on the Proposed Conceptual Site Layout diagram) to maintain the current</p>	<p>No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

1065	291 - 2	Lea Bancroft	North Vancouver, BC	<p>1. BURNCO's original proposal described the existing gravel fish channel acting as a "French Drain" on the subsurface water flow in this area of the McNab valley, thereby literally draining the natural water table in this area of the lower McNab valley. Looking at the proponents subsurface water table maps/charts this fish channel does appear to be a roughly the lowest point in the valley water table which tends to agree with BURNCO's description that it drains the valley. However, the proponent's initial excavation area is shown in relatively elevated porous ground on the west side of this site that appears to be considerably above the fish channel elevation. During these initial project phases how does the proponent expect to maintain the pit/pond level if the existing fish channel tends to dry up during the summer months? Will the initial pit be excavated to a depth below the fish channel using conventional excavation equipment which will then tend to further drain the existing fish channel into the excavated pit/pond.</p>	<p>The elevation of the base of the groundwater channel, a large structure that crosses most of the footprint of the proposed pit, is at about 2.5 m in its upper portion and decreases towards the shoreline. Before construction of the mine, the water table is depressed to this level as the channel removes any water above this elevation as surface water. The groundwater channel (e.g., the fish channel) will be blocked in the first year of operations; as a result the water backs up behind this blockage and the water level in the channel rises, resulting in an increase in the local groundwater levels, a flattening of the groundwater gradient between McNab Creek and the Project site and a reduction in the rate of flow from McNab Creek to the groundwater system. In the early stages of operation the open pit is relatively small and there are less losses from McNab Creek compared to baseline conditions. As the pit becomes large it approaches the flow from McNab Creek that is occurring under baseline conditions (pre-mining).</p> <p>The existing channel demonstrates reductions in surface water flows during the summer months, however, groundwater still flows through the system at depth. The pit will be excavated to elevation -35 m, much deeper than the existing channel, and below the groundwater table.</p>
1066	291 - 3	Lea Bancroft	North Vancouver, BC	<p>2. BURNCO's proposal is to construct a dam on the fish channel towards the middle of the project to raise the water table behind the berm in order to maintain the pit/pond operating level (replenishing 226,921 Gallons Per Day for 365 days of the year [NOTE calculation provided]). The excess volume of the subsurface water will then continue to flow under/through the berm to distribute the flows to the tidal estuary area and creeks. With seasonal variation in drainage flow requirements how will the water table level be controlled to suit the dredge requirements without allowing the pit/pond water to flow freely over the dam? You can't adjust the hydrostatic head created by the pond level while maintaining the pit/pond level for optimum dredging purposes.</p>	<p>During the operational phase of the Project the water level in the pit will be monitored but not be actively managed. Mining operational activities will need to accommodate fluctuations in the Pit Lake water levels. The owner shall monitor the groundwater gradient and the water levels within the pit lake. These monitored groundwater and pit lake water levels shall be used to refine the analysis of the closure groundwater gradient and pit lake water level. These analysis shall be used to inform the progressive planning of the mine. After closure, if necessary, the groundwater gradient can be altered (varying the rate of loss from McNab Creek) by adjusting the height of the weir at the outlet of the pit lake.</p> <p>The Pit Lake water levels provided in Table 5.5-7 (Volume 2 Section 5.5), include consideration of surface water and groundwater inflows and groundwater outflows from the Pit Lake on an average annual basis. Additional analysis indicated that during extreme wet periods ranging in duration from days to months, the increased rates of surface water and groundwater inflow would result in Pit Lake water levels in excess of the values presented in Table 5.5-7. Under these conditions the rate of groundwater outflow would also increase above those predicted under annual average conditions. The height of the Pit Lake Containment Berm was designed in order to contain the elevated Pit Lake water levels that would result from extreme prolonged wet periods. Details of the analysis and design of the Pit Lake Containment Berm will be provided in the Mines Act Application.</p>

1067	291 - 4	Lea Bancroft	North Vancouver, BC	<p>3. As the size of the pit/pond is increased in both coverage and depth an ever increasing volume of the existing "subsurface" material will be removed (down to bedrock?). As this occurs an increasing volume of the subsurface water will then actually flow through the open pit/pond (confirmed by Golder). Over the 16 years of operation the fines will accumulate in the pit/pond water when the finer materials that are not removed by the dredging remain or flow back into the pit/pond along with any rock crushing dust that may find its way into the pond. These accumulated fines will then settle preferentially on the "downstream" side of the pond when carried by the subsurface water flowing through the pond towards the ocean. This ongoing deposition of fines on the downstream side of the pond over the 16 year life of the project will seriously reduce or eliminate the porosity of the pond's downstream wall thereby seriously limiting any subsurface drainage out of the pond to the tidal estuary area. As the pit/pond is expanded to its full proposed size (covering the lower area of the McNab valley) the accumulated settled fines could significantly restrict this high volume subsurface flow draining out of the McNab valley which could then breach the proposed flood control dam and/or overflow the berm with poor quality pit/pond water carrying the accumulated fines. How does the proponent intend to address the issue of decreasing the porosity of the pond perimeter walls over time that are required to maintain the ongoing underflow and filtration of subsurface water passing through the pit/pond to the tidal estuary as the pit/pond is expanded to its proposed maximum size that literally fills the bottom of the McNab valley? If the existing subsurface water</p>	<p>Based on our assessment and analysis of the geologic and hydrogeologic conditions at the Site, it is not anticipated that the accumulation of fines on the downgradient face of the excavation will have a significant impact on the predicted Pit Lake water levels. However, the owner shall monitor the groundwater gradient and the water levels within the pit lake throughout the operational phase of the Project. These monitored groundwater and pit lake water levels shall be used to refine the analysis of the closure groundwater gradient and pit lake water level. These analysis shall be used to inform the progressive planning of the mine. If the results indicate that the mechanism described in this question is taking place, the mine phasing and development plan could be adjusted to progressively advance towards the final downgradient face of the mine, thereby exposing a new surface on the downgradient face with each progressive phase.</p>
1068	291 - 5	Lea Bancroft	North Vancouver, BC	<p>4. Will the proponent's water filtration plant have the capacity to remove the fine suspended solids from the volume of subsurface water draining out of the McNab Valley that could pass through the final size of the pit/pond reservoir and if so how long will BURNCO maintain this filtration equipment?</p>	<p>Water will be used in the Processing Area to wash the fines from the aggregate material. This water will be recycled in two water storage tanks and re-used. There is no water filtration plant associated with the Proposed Project. Geotechnical analyses presented in Appendix 5.6-E of the EA found that fines are not expected to migrate with the groundwater from the pit into the downstream environment during operations. Direct surface connection between the pit lake and the receiving environment is not expected during operations; it will only be established at closure when the constructed offset habitat is connected to the pit lake. At that time, pit lake water will be monitored to confirm the prediction made in the assessment that pit lake water does not represent a deleterious substance and would be unlikely to cause pollution in the downstream receiving environment.</p>
1069	291 - 6	Lea Bancroft	North Vancouver, BC	<p>5. The Province of BC has recently changed its regulations regarding "Dam Structures". Will the proposed berm be built to these revised Dam Structure standards to ensure present and future stability, or will it simply be built up as an earthen berm.</p>	<p>The berm will be meet the required design standard to be confirmed with the Ministry of Energy and Mines at permitting. It is BURNCO's understanding that the containment berm will not be classified as a dam.</p>
1070	292 - 1	Roy Ramage	Squamish, BC	<p>I believe the gravel works plant team has done Their due diligence and there should be no reason Not to continue with the planned gravel pit As laid out</p>	<p>Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

1075	294 - 3	Personal Information Withheld	North Vancouver, BC	Who should be hold accountable for turning BC into a devastated Third World barren ground with these insane projects?	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors’ environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
1076	295 - 1	Nathaniel Berger	Vancouver, BC	The McNab creek area is a beautiful place. There should not be mines there, that would ruin it.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

1077	296 - 1	Personal Information Withheld	Squamish, BC	I love the ocean life that's coming back In recent years. Imagine what it become if we let it. 100 years from now no one will give a shot about a gravel mine but the marine life keeps the planet alive	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1078	297 - 1	Dr. K. L Funt	Horseshoe Bay, BC	My family lives directly on Howe Sound. I would like to express our very strong opposition to the McNab Creek Estuary proposal to start a gravel pit.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1079	297 - 2	Dr. K. L Funt	Horseshoe Bay, BC	Howe Sound is Vancouver's natural treasure. It is beyond beautiful and exceeds the fjords of Norway in tourist potential.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1080	297 - 3	Dr. K. L Funt	Horseshoe Bay, BC	B.C. and Canada should make it a National Park, not exploit it for short term natural resource extraction gain. This would be national insanity.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
1081	298 - 1	Annalisa Fiteni	Squamish, BC	Nooooooll !!! Don't put more heavy machinery on our highway !!!! It's already so dangerous	A further source of aggregate material is required to ensure the reliability of supply. Securing alternate suppliers is not the preferred long-term option for BURNCO as there is too much uncertainty surrounding the ability to supply aggregate material during times of increased demand, in addition to the in ability to control the quality and price of material.

1082	299 - 1	Personal Information Withheld	Squamish, BC	Please consider the damage to the health of our natural resources the Burnco Aggregate mine will cause. The McNab Creek Estuary is a sensitive area that sustains life for Salmon and a large variety of plant and animal species. Once the damage is done reversing it will not be easy.	<p>Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.</p> <p>The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.</p> <p>A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.</p>
1083	299 - 2	Personal Information Withheld	Squamish, BC	Please consider the damage to the health of our natural resources the Burnco Aggregate mine will cause. The McNab Creek Estuary is a sensitive area that sustains life for Salmon and a large variety of plant and animal species. Once the damage is done reversing it will not be easy.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1084	299 - 3	Personal Information Withheld	Squamish, BC	There are abundant aggregate sites away from this sensitive area please use them.	<p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>
1085	300 - 1	Gerald Cullen	Vancouver, BC	Howe Sound is still recovering after a very long period with industrial activity affecting the sound. Mining, pulp mills, and logging caused widespread pollution dating from the early 1900's. The recovery is still underway.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. 1089	300 - 5	Gerald Cullen	Vancouver, BC	I'm against this gross intrusion of industrial activity into a key recreational area for minimal positive economic impact.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
1090	301 - 1	D Sage	Squamish, BC	Stop this from happening period.money,money money,I'm sick of it.save these special places!!!	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1091	302 - 1	Personal Information Withheld	Gibsons, BC	Burnco is a responsible proponent. I believe they can operate safely and protect the environment. I believe it's a good fit for McNab Creek and Howe Sound. BC needs jobs for the people and tax revenues- this provides both. I support the project for those reasons.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1092	303 - 1	Lynn Wilbur	North Vancouver, BC	We are going down the wrong road here. Howe Sound must be protected. National Park status is required. Vancouverites need wild places. Not another Burrard Inlet! !!	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
1093	304 - 1	Emilie Montgomery	Lions Bay, BC	Today Sept 30 2016 we witnessed a Herd of wild elk in Howe Sound, at McNab Creek  our wildlife must be continually protected if we wish to have them around for future generations.	A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.  Potential effects were assessed for the following selected valued components: - Amphibian species at risk - Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet; - Roosevelt elk and grizzly bear; - Environmentally sensitive ecosystems; - Ecosystems at risk; and - Plant species a risk.  Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.  Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.
1094	305 - 1	Ken Money	Squamish, BC	This should be stopped. We do not need this so close to the sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1095	306 - 1	Personal Information Withheld	Bowen Island, BC	I oppose the Burnco mine proposal.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1096	307 - 1	John Phillips	Lions Bay, BC	This project must not proceed.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1097	307 - 2	John Phillips	Lions Bay, BC	We have spent 20 years cleaning up Howe Sound. We are just starting to see the benefits of this work - more Orcas, Dolphins and Salmon coming in to feed on the new populations of herring and other small fish.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1098	307 - 3	John Phillips	Lions Bay, BC	There is an opportunity to turn Howe Sound into a UNESCO World Heritage site.	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. 1103	308 - 3	Personal Information Withheld	Victoria, BC	McNab Creek currently hosts bald eagles Eagle surveying for a meal , Roosevelt Elk , and an estuary flourishing with marine life . Burnco's consultants identified 23 species at risk that this mine would threaten.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
1104	308 - 4	Personal Information Withheld	Victoria, BC	McNab Creek currently hosts bald eagles Eagle surveying for a meal , Roosevelt Elk , and an estuary flourishing with marine life . Burnco's consultants identified 23 species at risk that this mine would threaten.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1105	308 - 5	Personal Information Withheld	Victoria, BC	The Departments of Fisheries and Oceans expressed strong concern about the project's impact to fish and fish habitat, particularly chum and coho salmon.	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO's involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>

1106	309 - 1	Donna Patrick	Gibsons, BC	I am not in favour of theirs mine. The environment will be ruined. There will be no more singleness in this channel. This is the wrong kind of industry for this area. . Do not allow this.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1107	310 - 1	Jon Povill	Lions Bay, BC	Howe Sound is only now finally recovering from decades of environmental abuse.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
1108	310 - 2	Jon Povill	Lions Bay, BC	The proposed gravel mine at McNabb Creek would renew the policy of sacrificing irreplaceable habitat for very minimal economic gain -- and whatever that gain might be, it would be more than eliminated if the operators of the mine were to fail to restore the area to its natural state after the mining operation. If the company were to go out of business, the province and its taxpayers would be left holding the bag.	Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.  Benefits of the Proposed Project include: - capital expenditures (\$21.5 million), - operational expenditures (\$13 million/year), - direct, indirect and induced employment, and - taxation revenue.  Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.  BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.  Other benefits or positive effects of the Proposed Project are: - Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses; - Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel; - New amphibian breeding habitat ; - Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.

1109	310 - 3	Jon Povill	Lions Bay, BC	The proposed gravel mine at McNabb Creek would renew the policy of sacrificing irreplaceable habitat for very minimal economic gain -- and whatever that gain might be, it would be more than eliminated if the operators of the mine were to fail to restore the area to its natural state after the mining operation. If the company were to go out of business, the province and its taxpayers would be left holding the bag.	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>
1110	310 - 4	Jon Povill	Lions Bay, BC	I strongly oppose the mine.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1111	310 - 5	Jon Povill	Lions Bay, BC	I live just across the sound from its location and I would have to put up with its noise and light pollution in addition to the knowledge that it would be destroying elk, salmon and orca habitat.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRDR noise bylaw was considered as part of the assessment.</p>
1112	310 - 6	Jon Povill	Lions Bay, BC	I live just across the sound from its location and I would have to put up with its noise and light pollution in addition to the knowledge that it would be destroying elk, salmon and orca habitat.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

1117	310 - 11	Jon Povill	Lions Bay, BC	And even if such a bond is offered, the disruption to the ecosystem, the noise and unsightliness of the site, along with the loss of value in tourism and filming location fees all speak to the undesirability of this project. Please do not grant it an approval.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
1118	311 - 1	Ronald Ramsay	Shirley, BC	Salmon habitat at risk.It's a NO GO ZONE for resource extraction.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
1119	312 - 1	James Dahmer	Squamish, BC	just stop it. we dont need this.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1120	313 - 1	Personal Information Withheld	Lions Bay, BC	please keep industry out of Howe Sound. The whales and dolphins have finally returned to this area after 40 years. We live and boat in this area weekly, and it should be preserved for recreation and tourism.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.

1129	318 - 1	Cheryle Dobbyn	Alberta	Dear Important Person: I live on the east side of the Rocky Mountains in Alberta. I'm old now, but I grew up in Saskatchewan...a true 'prairie kid'. For me, the West Coast is Canada's most beautiful gift. I love taking time to visit, embrace, and breathe in the beauty of our West Coast. For decades, I watched and listened as people fought to protect and restore Howe Sound. I rejoiced when The Sound began, and then has continued, to become a healthy, clean and vibrant living ocean again.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1130	318 - 2	Cheryle Dobbyn	Alberta	PLEASE, after all this work and blood and sweat and money and time and supreme effort....do not open up this old wound of noise, pollution, and dirty extraction for the almighty dollar. I would prefer to see almighty whales in Howe Sound...and perhaps a kayak or two or ten. Please.	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.
1131	318 - 3	Cheryle Dobbyn	Alberta	PLEASE, after all this work and blood and sweat and money and time and supreme effort....do not open up this old wound of noise, pollution, and dirty extraction for the almighty dollar. I would prefer to see almighty whales in Howe Sound...and perhaps a kayak or two or ten. Please.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
1132	319 - 1	Leslie Stanick	Surrey, BC	Howe Sound is teeming with life, from salmon and herring, seals, orcas and humpback whales. Bird life including cormorants, eagles, gulls, herons and many other species make their home in this unique sound, filled with wildlife. Its a magical wildlife refuge.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
1133	319 - 2	Leslie Stanick	Surrey, BC	So when I heard that the Burnco Aggregate Project, a gravel mine 100 football fields long, and as deep as a ten story building is being proposed on the sand flats, I had to protest.	At closure, the pit lake with be 600 m by 500 m, and approximately 35 metres deep.

1134	319 - 3	Leslie Stanick	Surrey, BC	The flats are a vital spawning ground for salmon which have only recently made a comeback after the devastating pollution of Howe Sound by 100 years of logging and mining. With the devastating lack of salmon this year, only 800,000 returning to spawn in the Fraser River, it would be crazy to destroy an estuary that is just coming back to life on these tidal flats.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1135	319 - 4	Leslie Stanick	Surrey, BC	The Burnco Mine project would be creating noise 24 hours a day, 7 days a week, destroying the peace of this beautiful region, causing distress to all the wildlife in the area. Don't destroy this unique and beautiful haven of tranquility for a gravel pit. Please protect this jewel for generations to come.	<p>The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCR D noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.</p> <p>Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.</p>
1136	319 - 5	Leslie Stanick	Surrey, BC	The Burnco Mine project would be creating noise 24 hours a day, 7 days a week, destroying the peace of this beautiful region, causing distress to all the wildlife in the area. Don't destroy this unique and beautiful haven of tranquility for a gravel pit. Please protect this jewel for generations to come.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
1137	320 - 1	Denise Olson	Grantham's Landing, BC	I would like it noted publicly that I am AGAINST Burnco and affiliates proposed operation of gravel mining in McNab creek area in Howe Sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1142	322 - 3	Delena Angrignon	Squamish, BC	<p>This project has been refused in the past due to concerns about the fish and fish habitat in McNab Creek, in particular the Chum and Coho Salmon.</p> <p>It's only because of gutted environmental laws by the Harper Government that Bunco is back trying to get approval. The proposed mine developer, Burnco, filed a judicial review application against DFO in BC Supreme Court to 'strong arm' the DFO to allow them to proceed to an environmental review. The DFO have since agreed to that review with serious concerns as "the project presents a high risk to Salmon and Salmon habitat".</p>	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO's involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>
1143	322 - 4	Delena Angrignon	Squamish, BC	<p>In addition to the destruction to fish habitat, Burnco's own consultants believe the mine site could be home to 21 species at risk including a population of Roosevelt Elk re-introduced to McNab Creek in 2001 by the BC Ministry of the Environment.</p>	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
1144	322 - 5	Delena Angrignon	Squamish, BC	<p>The concerns for Fish/fish habitat:</p> <p>a) The project's potential to cause serious harm to fish and fish habitat, due to changing hydrological patterns that would:</p> <ul style="list-style-type: none"> <li>-Affect the water and salinity levels in McNab Creek, As they dig down to remove gravel, the fresh water from the estuary will be siphoned into the pit, which will change the salinity of McNab Creek and impact the salmon runs.</li> <li>-Lead to salt water seeping into the estuary ground water – which would kill the plants there.</li> </ul>	<p>The hydraulic conductivity of the valley sediments is much higher than hydraulic conductivity of any bedrock structures, if they exist. Therefore, the groundwater flow in the valley sediments will dominate and it will provide key control on the position of the salt water-freshwater interface. Furthermore, because of topographic highs that surround the valley, the hydraulic heads are expected to be higher than in the valley sediments, inhibiting saltwater ingress. As presented in Section 3.3 in Appendix 5.6-A of the EAC Application/EIS, based on monitoring data (2010-2014), tidal elevations exceeded groundwater elevation only in rare occasions between July and September of each monitoring year. During these high tide intervals, there is an inferred landward gradient in the immediate vicinity of the shoreline; however, its duration is inherently less than the corresponding periods of southwards gradient associated with lower tidal position. Accordingly, the net groundwater flow direction during the entire monitoring period is confirmed to be southwards toward the marine foreshore. Moreover, monitoring data indicate that the saltwater wedge could be located at greater depths than approximately -30 m elevation; analytical calculations based on methodology presented in Domenico and Schwartz (1990) showed that, due to relatively high groundwater flow in the alluvial sediments, the saltwater edge could be depressed to the depth of the overburden/bedrock contact within 50 m to 150 m of the ocean shore. Based on these observations, the potential presence of a fault structure in bedrock in the vicinity of the project area is not considered to influence groundwater flow direction in the valley sediments or increase the risk of saltwater intrusion.</p>

1145	322 - 6	Delena Angrignon	Squamish, BC	<p>b) DFO is very worried about the fish and fish habitat in McNab Creek, particularly chum and coho salmon. The Vancouver Aquarium is concerned re the salmon, and re rockfish at the estuary mouth.</p> <p>c) The planned artificial salmon spawning channel would do nothing to compensate for the damage to fish and fish habitat in the McNab estuary.</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1146	322 - 7	Delena Angrignon	Squamish, BC	<p>3. The effects of wet mining (digging the gravel out of water, where the estuary forest used to be): Burnco's argument that there won't be dust because they're mining "wet" is also misleading because the dust just becomes silt. The silt will kill the plant and animal life in the estuary.</p>	<p>Wash water will be processed for removal of fines and silt in a 95% efficient wash plant to be fed using recycled water from two large storage tanks. Fines will not be discharged to the estuary; they will be deposited in a designated inland fines area and covered in accordance with an approved Reclamation and Effective Closure Plan.</p>
1147	322 - 8	Delena Angrignon	Squamish, BC	<p>4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.</p>	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>
1148	322 - 9	Delena Angrignon	Squamish, BC	<p>4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>

1149	322 - 10	Delena Angrignon	Squamish, BC	4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
1150	322 - 11	Delena Angrignon	Squamish, BC	4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>

1151	322 - 12	Delena Angrignon	Squamish, BC	4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
1152	322 - 13	Delena Angrignon	Squamish, BC	5. Would require SLRD to rezone this land, moving this land into industrial zoning forever.	<p>The proposed Project lies within Electoral Area F of the Sunshine Coast Regional District. While there are three OCPs in Electoral Area F, none of them overlap with the local study area (LSA). Regional zoning for the LSA is discussed in Volume 2, Part B, Section 6 of the EAC Application/EIS.</p> <p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>

1153	322 - 14	Delena Angrignon	Squamish, BC	<p>Economically: Burnco has not proven that there is a huge demand that cannot be met by existing quarries. In fact, my concern is that they are taking away work from BC Corporations and only looking to gain a foot into Howe Sound for the potential of bidding on work for Woodfibre LNG that would compete with existing businesses that employ people. Burnco's 12 full time jobs aren't worth it as they are not adding to the pool of jobs but just taking away existing jobs. So that nets zero employment benefit.</p>	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resource is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>
1154	322 - 15	Delena Angrignon	Squamish, BC	<p>Economically: Burnco has not proven that there is a huge demand that cannot be met by existing quarries. In fact, my concern is that they are taking away work from BC Corporations and only looking to gain a foot into Howe Sound for the potential of bidding on work for Woodfibre LNG that would compete with existing businesses that employ people. Burnco's 12 full time jobs aren't worth it as they are not adding to the pool of jobs but just taking away existing jobs. So that nets zero employment benefit.</p>	<p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>

1157	322 - 18	Delena Angrignon	Squamish, BC	Burnco is not adding to the value of this area by their project. Howe Sound is a recreational playground that attracts tourism dollars because of the pristine nature it is in.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
1158	322 - 19	Delena Angrignon	Squamish, BC	This Calgary based company is the only recipient of gain. Their websites boast areas that they have remediated successfully. However, it must be noted that they have never remediated a pristine environment. Who would hold them accountable?	<p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 and are summarized below. BURNCO commits to funding for these monitoring initiatives.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring.</p> <p>Compliance monitoring will occur during all phases of Proposed Project activities as a part of the Proposed Project construction and operational Environmental Protection Plans (EPPS). Compliance monitoring will include assessment of Proponent and contractors' environmental performance using specifically developed performance indicators and benchmarks. Where possible, an adaptive management approach will be used to modify management plans as needed based on the results of the monitoring program.</p> <p>BURNCO will submit a report to the BCEAO on the status of compliance with the Certificate Conditions, at the following times:</p> <ul style="list-style-type: none"> <li>- At least 30 days prior to the start of Construction;</li> <li>- On or before January 31 in each year after the start of Construction;</li> <li>- At least 30 days prior to the start of Operations;</li> <li>- On or before January 31 in each year after the start of Operations;</li> <li>- At least 30 days prior to the start of Closure and Reclamation;</li> <li>- On or before January 31 in each year after the start of Closure and Reclamation; and</li> <li>- Within 30 days of completing Closure and Reclamation.</li> </ul> <p>Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>

1159	322 - 20	Delena Angrignon	Squamish, BC	The idea that they will build a berm of soil along the part of the creek closest to the gravel extraction, sounds good until you think about the dust and runoff from the berm will wash into the creek, and damage fish and insect life there.	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>
1160	322 - 21	Delena Angrignon	Squamish, BC	It will probably also silt up/kill fragile ancient glass sponges nearby in the ocean.	<p>A detailed assessment of potential effects on marine resources, including marine benthic communities, is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>Glass sponges are a group of filter feeding organisms which can form large sponge reefs that provide habitat for other marine invertebrate and fish species. Glass sponges in Howe Sound live at depths as shallow as -20 m (chart datum). BURNCO has included glass sponges in the assessment of potential effects on marine resources.</p> <p>Although no glass sponges were observed during the dive and towed video surveys of the Proposed Project area, foreshore and sub-tidal nearshore conducted for the assessment, their known occurrences throughout Howe Sound have been documented. The marine footprint of the Proposed Project does not overlap with any known or mapped locations of glass sponges or glass sponge reefs occurrences.</p> <p>Potential residual effects of propeller scour and aggregate spills on glass sponges were assessed. Propeller wash velocities at the depths at which glass sponges occur are predicted to be within the same magnitude as tidal currents present at this depth. With the application of proposed mitigation, the likelihood of an aggregate spill adversely affecting glass sponge colonies is low. The significance of potential residual effects on marine benthic communities, including glass sponges, were determined to be negligible or not significant.</p>
1161	322 - 22	Delena Angrignon	Squamish, BC	With what we know about the assets in Howe Sound from the David Suzuki project and the value of estuaries to the whole of Howe Sound, this project should not be provided with an EA certificate. We ask the BCEAO to reject this project.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

1162	323 - 1	Personal Information Withheld	Squamish, BC	Why, when we have seen Howe Sound come back by leaps and bounds (in terms of a healthy and sustainable environment for sea and land wildlife to once again flourish), would we even consider granting a company like BURNCO the chance to ruin the advances we have made to bring back such a vital ecosystem from human mistakes made in the past? I say no to steps backward and YES to continuing to champion the fish and other wildlife, AND also the human enjoyment, of a clean Howe Sound and McNab Creek estuary! BURNCO must not be allowed to ruin the years of work it has taken to get this sensitive ecological area back on its feet. Thank you.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1163	324 - 1	Personal Information Withheld	Squamish, BC	We all realize that [high] paying jobs in our corridor very important. The only problem here is that our salmon are being attacked ecologically from too many sources. Sorting out the salmon should be the first priority for our province. We must remember that salmon is the most important species in our province and we must do everything to protect them. Our province needs to start thinking more long term instead of doing what's good for us now. We need sustainable businesses and this can be done but we can't keep letting in these projects that are hurting our fish and our waters.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
1164	324 - 2	Personal Information Withheld	Squamish, BC	We all realize that [high] paying jobs in our corridor very important. The only problem here is that our salmon are being attacked ecologically from too many sources. Sorting out the salmon should be the first priority for our province. We must remember that salmon is the most important species in our province and we must do everything to protect them. Our province needs to start thinking more long term instead of doing what's good for us now. We need sustainable businesses and this can be done but we can't keep letting in these projects that are hurting our fish and our waters.	BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. The Sustainable Development Framework for the proposed Project is presented in Section 2.5.4.2 of the EAC Application/EIS.
1165	325 - 1	Tina Winterlik	Vancouver, BC	Please for the sake our children and children's children do not allow this to happen. Please watch the videos on this page  Help Save Howe Sound- Only 2 days left <a href="https://tinawinterlik.blogspot.ca/2016/10/help-save-howe-sound-only-2-days-left.html">https://tinawinterlik.blogspot.ca/2016/10/help-save-howe-sound-only-2-days-left.html</a>	Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1181	331 - 2	Michael Lundrigan	Squamish, BC	there is no need to choose this location really !!!the use of barges and boats to make gravel really people wake up has to be some place that doesn't involve howe sound or the ocean shore !! all the rock mountains and you have to pick a place next to the ocean and those big heavy trucks on a very busy part of the sea to sky highway !!!	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>
1182	332 - 1	Personal Information Withheld	Whistler, BC	We need wild salmon and nature to thrive, not a gravel mine. No to this industrial site!	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

1183	333 - 1	Personal Information Withheld	Lions Bay, BC	<p>Marcy, Mike, Scott, and Will,</p> <p>Lady and gentlemen of Burnco.</p> <p>The pic attached was taken yesterday at McNab.</p> <p>In this message please know that I am one of a significant group of citizens who live in Lions Bay, Howe Sound. We also, because of where we live, enjoy Howe Sound. Every summer, all summer, we take our families over to McNab Creek and enjoy this pristine area. It's not just us though, it's many people who live in what we all refer to as the Sea to Sky Corridor.</p> <p>You would too if you lived here. You would also take your kids here, your kid's kids, and then they would begin the same cycle. The same, very positive cycle, of caring for this planet. Especially the places like McNab Creek.</p> <p>Because of where you live, I can't expect you to really understand this.</p> <p>When I read through all of your corporate history, one point stands out quite clearly. You care a lot about your family history.</p> <p>Well we all do too. And you would if you lived here, and experienced what we all do.</p> <p>No matter what you believe based on your studies, you will do</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1184	334 - 1	Personal Information Withheld	Bowen Island, BC	<p>STOP. JUST STOP. NO. NO. NO Gravel pit, No heavy equipment, No tankers, No more destruction. No more death of our home, our animal friends, no more poison. No more greed/money/profit as the decision point on our futures. With all the information, statistics, reports and the strongly expressed sentiments of the people - wake up. Say No to death and Yes to Life.</p>	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. 1186	335 - 2	Personal Information Withheld	Brackendale, BC	I'm not convinced that the project is in the best interests of the Howe Sound environment and community.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1187	335 - 3	Personal Information Withheld	Brackendale, BC	The previous Fisheries assessment stated that the MacNabe creek would be rendered uninhabitable to wild fish stocks if Burnco goes ahead and this will continue to be the case despite their claims otherwise. Don't sacrifice Howe Sound as an important resource.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1188	335 - 4	Personal Information Withheld	Brackendale, BC	The noise and light pollution, increased tug and barge traffic and foreshore habitat destruction will erode the enjoyment of the sound recreationaly at a time when the potential for increased tourism and subsequent economic benefit could eventually far outweigh the 12 jobs created by such an environmentally destructive form of industry. Vancouver is so lucky to have such a world class marine Fjord and ecosystem capable of supporting a large and increasing number of fish, mammala and birds. Have you seen the Orca and Porpoises? It is only just now recovering from the last 100+ years of industrial activity and we can't just go backwards and start over.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>

1189	335 - 5	Personal Information Withheld	Brackendale, BC	<p>The noise and light pollution, increased tug and barge traffic and foreshore habitat destruction will erode the enjoyment of the sound recreationally at a time when the potential for increased tourism and subsequent economic benefit could eventually far outweigh the 12 jobs created by such an environmentally destructive form of industry. Vancouver is so lucky to have such a world class marine Fjord and ecosystem capable of supporting a large and increasing number of fish, mammals and birds. Have you seen the Orca and Porpoises? It is only just now recovering from the last 100+ years of industrial activity and we can't just go backwards and start over.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
1190	335 - 6	Personal Information Withheld	Brackendale, BC	<p>The noise and light pollution, increased tug and barge traffic and foreshore habitat destruction will erode the enjoyment of the sound recreationally at a time when the potential for increased tourism and subsequent economic benefit could eventually far outweigh the 12 jobs created by such an environmentally destructive form of industry. Vancouver is so lucky to have such a world class marine Fjord and ecosystem capable of supporting a large and increasing number of fish, mammals and birds. Have you seen the Orca and Porpoises? It is only just now recovering from the last 100+ years of industrial activity and we can't just go backwards and start over.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>

1196	336 - 2	Steve March	Gibsons, BC	This is a pristine area that we can be proud of. Howe Sound is a through fair for whales, porpoises, and other marine life.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1197	336 - 3	Steve March	Gibsons, BC	It is also a tourist magnet to enjoy the scenery and fishing possibilities.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
1198	336 - 4	Steve March	Gibsons, BC	Please end this project. <a href="https://www.youtube.com/watch?v=vFzB1YSJcA4">https://www.youtube.com/watch?v=vFzB1YSJcA4</a>	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1199	337 - 1	Ray Mason	Pemberton, BC	McNab Creek is an important fish spawning habitat in Howe sound.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1200	337 - 2	Ray Mason	Pemberton, BC	Gravel acts as a huge water sink which enables water in McNab creek to flow even during hot dry summers. This water flow is extremely important for all the organisms that live in and around McNab Creek. The value of keeping McNab Creek intact is more valuable than the value of the gravel.	<p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS.</p> <p>Positive effects on the flows in McNab Creek are predicted to result from reducing the rate of flow loss to the groundwater system. Increased baseflows are also predicted in the foreshore minor streams. Water quality predictions are below applicable Water Quality Guidelines.</p> <p>Groundwater flow is predicted to be less than the baseline during the first 15 years of operation. This loss represents a gain in flow in McNab Creek. Groundwater flow at closure will be controlled through adaptive management of the overflow structure. No water quality parameters are predicted to exceed BCWQG or CCME Guidelines.</p>

1204	339 - 3	Sharon Ann Smith	Brackendale, BC	The impact on our environmentally recovering Howe Sound must not be underestimated. Decades of hardwork by many stakeholders have produced the results we see all around us in our beautiful Howe Sound. I have lived and worked here for 27 years. I worked in the industrial sector for many years and saw firsthand the damage done. I have participated in the recovery and am committed to the restoration and maintenance of the Howe Sound ecosystem.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1205	339 - 4	Sharon Ann Smith	Brackendale, BC	This incredibly diverse area must be protected and preserved to sustain our wildlife and the health of our region. Please do not approve this project.	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
1206	340 - 1	Personal Information Withheld	Squamish, BC	As a resident of Squamish and a person who enjoys Howe Sound for its' natural beauty, marine life, wildlife, recreation and tourism, I strongly oppose the proposed gravel mine at the Mcnab Creek Estuary. Please consider these points as follows:	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1207	340 - 2	Personal Information Withheld	Squamish, BC	1. Why would anyone develop a gravel mine in Vancouver's ocean playground, an area of outstanding natural beauty? This is where an ever growing city comes to sail, dive, kayak, fish, camp and hike. Tourists flock from all over the world to see "SuperNatural, British Columbia", how would a gravel pit look in the tourism advertising?	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
1208	340 - 3	Personal Information Withheld	Squamish, BC	2. Howe Sound is only now showing encouraging signs of environmental recovery after decades of industrial misuse. Should we now allow a reindustrialization of the area?	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.

The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1210	340 - 5	Personal Information Withheld	Squamish, BC	3. How can we consider developing a massive 77 hectare pit which will excavate the entire McNab estuary from one side of the valley to the other, completely eliminating one of only three river estuaries in Howe Sound, without developing an integrated, long term land and water use plan for the whole of Howe Sound?	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1211	340 - 6	Personal Information Withheld	Squamish, BC	3. How can we consider developing a massive 77 hectare pit which will excavate the entire McNab estuary from one side of the valley to the other, completely eliminating one of only three river estuaries in Howe Sound, without developing an integrated, long term land and water use plan for the whole of Howe Sound?	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>

1212	340 - 7	Personal Information Withheld	Squamish, BC	4. The size of the gravel pit will limit access to the foreshore for wildlife such as elk, deer and bears who currently frequent the area to forage for food.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
1213	340 - 8	Personal Information Withheld	Squamish, BC	5. The excavation of the river estuary will dramatically change the movement of water through the valley and have a significant negative impact on the freshwater habitat.	<p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS.</p> <p>Positive effects on the flows in McNab Creek are predicted to result from reducing the rate of flow loss to the groundwater system. Increased baseflows are also predicted in the foreshore minor streams. Water quality predictions are below applicable Water Quality Guidelines.</p> <p>Groundwater flow is predicted to be less than the baseline during the first 15 years of operation. This loss represents a gain in flow in McNab Creek. Groundwater flow at closure will be controlled through adaptive management of the overflow structure. No water quality parameters are predicted to exceed BCWQG or CCME Guidelines.</p>
1214	340 - 9	Personal Information Withheld	Squamish, BC	6. The proposed mine developer, Burnco, filed a judicial review application against DFO in BC Supreme Court to ‘strong arm’ the DFO to allow them to proceed to an environmental review. The DFO have since agreed to that review with serious concerns as “the project presents a high risk to Salmon and Salmon habitat”.	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO’s involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>

1219	340 - 14	Personal Information Withheld	Squamish, BC	<p>9. Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.</p>	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>
1220	340 - 15	Personal Information Withheld	Squamish, BC	<p>9. Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

1231	343 - 5	Personal Information Withheld	Lions Bay, BC	The noise pollution alone will be an offence to anyone living in this amazing area. Simply put, sound travels so easily along waterways. Add in low marine cloud or fogs and the grating racket will become even more horrific. It is a fact that gravel pits are noisy; digging up rock is not a quiet pasttime. Anyone living near any gravel industry in the world will say the same thing.	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.
1232	343 - 6	Personal Information Withheld	Lions Bay, BC	The noise pollution alone will be an offence to anyone living in this amazing area. Simply put, sound travels so easily along waterways. Add in low marine cloud or fogs and the grating racket will become even more horrific. It is a fact that gravel pits are noisy; digging up rock is not a quiet pasttime. Anyone living near any gravel industry in the world will say the same thing.	The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Considering these factors, the modelled Project contributions to noise levels at NR4 (Eakins Point, inside the LSA and across the water from the Project) were below baseline and resulted in Negligible-Not Significant effects. Therefore the LSA will not be expanded.  A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.
1233	344 - 1	Personal Information Withheld	Lions Bay, BC	Burnco Products proposed large scale gravel mine at McNab Creek (a fjord and unique estuary) at the northern end of Howe Sound, 77 hectares, (over 200 football fields) including an onsite crushing and processing plant that will produce a minimum of one million tonnes per year for 20 years, run 24 hours a day, every day of the year and employ minimal jobs and be built by the company's own crews from outside B.C. in an "ecologically friendly manner" is absolutely unacceptable !	The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCRD noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.  Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.
1234	344 - 2	Personal Information Withheld	Lions Bay, BC	How on earth can you justify the need for this proposed mine.?	The Proposed Project will provide sand and gravel that will be used to meet the growing demands of the BC marketplace.  Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.

1235	344 - 3	Personal Information Withheld	Lions Bay, BC	There are already other existing gravel mines in the area that service Vancouver.	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>
1236	344 - 4	Personal Information Withheld	Lions Bay, BC	The aggregate production in no way validates the destruction of this salmon-bearing estuary.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1237	344 - 5	Personal Information Withheld	Lions Bay, BC	12 or so jobs is not worth ithe ecological disruption and devastation to such a richly populated wildlife area including elk,, grizzly, wolves, black bears and plenty of other at-risk species.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

1240	345 - 1	E. R. Goetsch	Lions Bay, BC	"We moved to Lions Bay 48 years ago when Howe Sound had been biologically dead as a result of being used as a dump site for the Britannia Mine and Woodfibre Pulp Mill. Both operations provided hundreds of jobs for workers, so it was considered an "acceptable trade off" for the loss of the environment and the fishing industry.	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1241	345 - 2	E. R. Goetsch	Lions Bay, BC	Both operations are now shut down for years and nature has re-juvenated itself. Many species of wildlife, including dolphins, salmon, herring as well as grizzlies have returned and were widely hailed by the News Media and have become attractions for the tourist industry.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
1242	345 - 3	E. R. Goetsch	Lions Bay, BC	Both operations are now shut down for years and nature has re-juvenated itself. Many species of wildlife, including dolphins, salmon, herring as well as grizzlies have returned and were widely hailed by the News Media and have become attractions for the tourist industry.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1243	345 - 4	E. R. Goetsch	Lions Bay, BC	Both operations are now shut down for years and nature has re-juvenated itself. Many species of wildlife, including dolphins, salmon, herring as well as grizzlies have returned and were widely hailed by the News Media and have become attractions for the tourist industry.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.

1244	345 - 5	E. R. Goetsch	Lions Bay, BC	Is it now time to reverse the trend, by creating one or two dozens jobs at the expense of a much less invasive industry which supports hundreds of workers directly and indirectly?	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
1245	345 - 6	E. R. Goetsch	Lions Bay, BC	I suggest this is NOT the correct way to go, as there are other suitable, less invasive gravel locations where the damage will be less evident.	<p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>
1246	346 - 1	Jamie Woodall	Bowen Island, BC	As a resident of Bowen Island, and as a global citizen, I am greatly concerned about the obvious environmental damage which will occur as a result of the proposed McNab Creek gravel mine.	<p>No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>

1247	346 - 2	Jamie Woodall	Bowen Island, BC	This is a region which is an integral part of revival of the local ecosystems and the repopulation of many species at risk (salmon and elk).	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1248	346 - 3	Jamie Woodall	Bowen Island, BC	As a parent, and as the owner of a company which teaches young adults about sustainability and global citizenship, I feel strongly about the legacy we are leaving for the generations who will raise their own grandchildren here. Having lived in Indonesia for years, I have witnessed the devastating repercussions of poor land management and its effect on the local human and animal populations.	BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. The Sustainable Development Framework for the proposed Project is presented in Section 2.5.4.2 of the EAC Application/EIS.
1249	346 - 4	Jamie Woodall	Bowen Island, BC	My family and I are firmly opposed to the development of this mine and ask that you prioritize the protection of the environment and the health and safety of the citizens who live here.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1250	347 - 1	Personal Information Withheld	Howe Sound, BC	Being a 25 year resident of McNab Creek and having raised my 3 kids and now 3 grandchildren there, I would like to express my grave concern regarding the Burnco Aggregate Mine Proposal.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1251	347 - 2	Personal Information Withheld	Howe Sound, BC	Hoping some of my fears would be alleviated by attending the Burnco Public Forum but unfortunately that proved to be unsuccessful. After talking to several Golder associates regarding the issues of pollution, noise, and wildlife it was clear to me that they could offer up studies of the area as it exists now but were very hesitant to commit to how it would be if this proposal goes through. When asking what the peak noise db levels during daily operation were as opposed to the average that they were displaying, I was told that he didn't know. I decided to look up Burnco's Sound Power Levels of Project Operation Equipment and could see some disturbingly high db levels associated to motors in crush plant(121.7) and falling gravel from Grizzly screen (120). During the construction phase Vibratory Hammers will run for hours kicking out 128.9 db which needless to say is extremely loud. Obviously this is the kind of information Burnco doesn't want to put on their informational posters.	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.  A noise management plan will be developed prior to construction, which will include a commitment to noise monitoring and a response plan to noise concerns received from nearby property owners, including receptors across the water such as Eakins Point.

	Ref #	Commenter (Name)	Location		
1252	347 - 3	Personal Information Withheld	Howe Sound, BC	<p>On every issue that Burnco is trying to address, the word mitigate is used. The Merriam-Webster dictionary defines mitigate as "to make (something) less severe, harmful or painful". Those three words should never be used in connection with McNab Creek or the Howe Sound.</p>	<p>Accepted EA practice in BC and Canada includes the identification of mitigation measures that are technically and economically feasible (i.e., practical) means of preventing or reducing to an acceptable level any potential adverse effect of the proposed project. BCEAO (2013) considers mitigation to be any practical means or measures taken to avoid, minimize, restore on-site, compensate, or offset the potential adverse effects of a project. Compensation means measures taken to further reduce the residual effect, and may include direct physical measures (e.g., habitat enhancement, restoration or creation on, near or away from the project site), or financial mechanisms that have the outcome of reducing the residual effect (e.g., contributions to research, recovery plans, population enhancement programs for endangered species). Offset is defined in the BCMOE's Procedures for Mitigating Impacts on Environmental Values (2012) as means to counteract, or make up for, a residual impact on an environmental component.</p> <p>Potential effects on McNab Creek are being mitigated through avoidance. There are no proposed discharges to or withdrawals from McNab Creek. The pit lake is being designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. Similarly, the size and location of the processing area was selected to avoid identified fish habitat.</p> <p>Examples of mitigation measures to reduce or minimize potential effects are:</p> <ul style="list-style-type: none"> <li>- Sediment and erosion control planning and monitoring the effectiveness of prescribed measures</li> <li>- Restricting clearing of wildlife habitat during breeding and calving periods, bird nesting periods and elk overwintering</li> <li>- Installing nest boxes for Western screech-owls in nearby forest habitat</li> <li>- Maintaining vegetation linkages and buffers to minimize habitat fragmentation and to allow escape routes for large mammals.</li> <li>- Monitoring for marine mammals during impact pile driving activities and maintaining a marine mammal safety zone based on injury noise threshold criteria.</li> </ul> <p>Examples of compensation or offset measure are:</p> <ul style="list-style-type: none"> <li>- Constructing a 790 metre extension of the lower segment of groundwater channel WC2 that will collect surface flow diverted through loss of the upper segment of WC2. This offset will increase the wetted area of the lower segment of WC2.</li> <li>- Establishing 1,250 m2 of new amphibian breeding ponds to offset the loss of existing amphibian habitat.</li> </ul>
1253	347 - 4	Personal Information Withheld	Howe Sound, BC	<p>I am having trouble understanding the risk to reward that this proposal offers. It is unconscionable that in today's day and age, we would consider risking the health of the McNab Creek Estuary ecosystem which is enjoyed by thousands for the financial benefit of a private few. Quite simply there will be no reward for the people living and enjoying this area and all it has to offer if Burnco comes in.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

1256	348 - 1	Personal Information Withheld	Squamish, BC	No no no major eye sore and the poor fish and water habitat	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
1257	348 - 2	Personal Information Withheld	Squamish, BC	No no no major eye sore and the poor fish and water habitat	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. 1265	350 - 3	Alison Fischer	Lions Bay, BC	<p>2. Fish/fish habitat:</p> <p>a) The project's potential to cause serious harm to fish and fish habitat, due to changing hydrological patterns that would:</p> <ul style="list-style-type: none"> <li>-Affect the water and salinity levels in McNab Creek, As they dig down to remove gravel, the fresh water from the estuary will be siphoned into the pit, which will change the salinity of McNab Creek and impact the salmon runs.</li> <li>-Lead to salt water seeping into the estuary ground water – which would kill the plants there.</li> </ul>	<p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS.</p> <p>Positive effects on the flows in McNab Creek are predicted to result from reducing the rate of flow loss to the groundwater system. Increased baseflows are also predicted in the foreshore minor streams. Water quality predictions are below applicable Water Quality Guidelines.</p> <p>Groundwater flow is predicted to be less than the baseline during the first 15 years of operation. This loss represents a gain in flow in McNab Creek. Groundwater flow at closure will be controlled through adaptive management of the overflow structure. No water quality parameters are predicted to exceed BCWQG or CCME Guidelines.</p>
1266	350 - 4	Alison Fischer	Lions Bay, BC	<p>2. Fish/fish habitat:</p> <p>a) The project's potential to cause serious harm to fish and fish habitat, due to changing hydrological patterns that would:</p> <ul style="list-style-type: none"> <li>-Affect the water and salinity levels in McNab Creek, As they dig down to remove gravel, the fresh water from the estuary will be siphoned into the pit, which will change the salinity of McNab Creek and impact the salmon runs.</li> <li>-Lead to salt water seeping into the estuary ground water – which would kill the plants there.</li> </ul>	<p>The hydraulic conductivity of the valley sediments is much higher than hydraulic conductivity of any bedrock structures, if they exist. Therefore, the groundwater flow in the valley sediments will dominate and it will provide key control on the position of the salt water-freshwater interface. Furthermore, because of topographic highs that surround the valley, the hydraulic heads are expected to be higher than in the valley sediments, inhibiting saltwater ingress. As presented in Section 3.3 in Appendix 5.6-A of the EAC Application/EIS, based on monitoring data (2010-2014), tidal elevations exceeded groundwater elevation only in rare occasions between July and September of each monitoring year. During these high tide intervals, there is an inferred landward gradient in the immediate vicinity of the shoreline; however, its duration is inherently less than the corresponding periods of southwards gradient associated with lower tidal position. Accordingly, the net groundwater flow direction during the entire monitoring period is confirmed to be southwards toward the marine foreshore. Moreover, monitoring data indicate that the saltwater wedge could be located at greater depths than approximately -30 m elevation; analytical calculations based on methodology presented in Domenico and Schwartz (1990) showed that, due to relatively high groundwater flow in the alluvial sediments, the saltwater edge could be depressed to the depth of the overburden/bedrock contact within 50 m to 150 m of the ocean shore. Based on these observations, the potential presence of a fault structure in bedrock in the vicinity of the project area is not considered to influence groundwater flow direction in the valley sediments or increase the risk of saltwater intrusion.</p>

1267	350 - 5	Alison Fischer	Lions Bay, BC	<p>2. Fish/fish habitat:</p> <p>a) The project's potential to cause serious harm to fish and fish habitat, due to changing hydrological patterns that would:</p> <ul style="list-style-type: none"> <li>-Affect the water and salinity levels in McNab Creek, As they dig down to remove gravel, the fresh water from the estuary will be siphoned into the pit, which will change the salinity of McNab Creek and impact the salmon runs.</li> <li>-Lead to salt water seeping into the estuary ground water – which would kill the plants there.</li> </ul>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1268	350 - 6	Alison Fischer	Lions Bay, BC	<p>b) DFO is very worried about the fish and fish habitat in McNab Creek, particularly chum and coho salmon. The Vancouver Aquarium is concerned re the salmon, and re rockfish at the estuary mouth.</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

1269	350 - 7	Alison Fischer	Lions Bay, BC	c) The planned artificial salmon spawning channel would do nothing to compensate for the damage to fish and fish habitat in the McNab estuary.	<p>Accepted EA practice in BC and Canada includes the identification of mitigation measures that are technically and economically feasible (i.e., practical) means of preventing or reducing to an acceptable level any potential adverse effect of the proposed project. BCEAO (2013) considers mitigation to be any practical means or measures taken to avoid, minimize, restore on-site, compensate, or offset the potential adverse effects of a project. Compensation means measures taken to further reduce the residual effect, and may include direct physical measures (e.g., habitat enhancement, restoration or creation on, near or away from the project site), or financial mechanisms that have the outcome of reducing the residual effect (e.g., contributions to research, recovery plans, population enhancement programs for endangered species). Offset is defined in the BCMOE's Procedures for Mitigating Impacts on Environmental Values (2012) as means to counteract, or make up for, a residual impact on an environmental component.</p> <p>Potential effects on McNab Creek are being mitigated through avoidance. There are no proposed discharges to or withdrawals from McNab Creek. The pit lake is being designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. Similarly, the size and location of the processing area was selected to avoid identified fish habitat.</p> <p>Examples of mitigation measures to reduce or minimize potential effects are:</p> <ul style="list-style-type: none"> <li>- Sediment and erosion control planning and monitoring the effectiveness of prescribed measures</li> <li>- Restricting clearing of wildlife habitat during breeding and calving periods, bird nesting periods and elk overwintering</li> <li>- Installing nest boxes for Western screech-owls in nearby forest habitat</li> <li>- Maintaining vegetation linkages and buffers to minimize habitat fragmentation and to allow escape routes for large mammals.</li> <li>- Monitoring for marine mammals during impact pile driving activities and maintaining a marine mammal safety zone based on injury noise threshold criteria.</li> </ul> <p>Examples of compensation or offset measure are:</p> <ul style="list-style-type: none"> <li>- Constructing a 790 metre extension of the lower segment of groundwater channel WC2 that will collect surface flow diverted through loss of the upper segment of WC2. This offset will increase the wetted area of the lower segment of WC2.</li> <li>- Establishing 1,250 m<sup>2</sup> of new amphibian breeding ponds to offset the loss of existing amphibian habitat.</li> </ul>
1270	350 - 8	Alison Fischer	Lions Bay, BC	3. The effects of wet mining (digging the gravel out of water, where the estuary forest used to be): Burnco's argument that there won't be dust because they're mining "wet" is also misleading because the dust just becomes silt. The silt will kill the plant and animal life in the estuary.	Wash water will be processed for removal of fines and silt in a 95% efficient wash plant to be fed using recycled water from two large storage tanks. Fines will not be discharged to the estuary; they will be deposited in a designated inland fines area and covered in accordance with an approved Reclamation and Effective Closure Plan.

1271	350 - 9	Alison Fischer	Lions Bay, BC	4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>
1272	350 - 10	Alison Fischer	Lions Bay, BC	4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>
1273	350 - 11	Alison Fischer	Lions Bay, BC	4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>

1274	350 - 12	Alison Fischer	Lions Bay, BC	4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>
1275	350 - 13	Alison Fischer	Lions Bay, BC	4. The project will cause dust, noise and light pollution (both on land and at sea – on the dock) for wildlife, local residents and also for recreational users of the area.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

1287	353 - 1	Gregory Pollard	Bowen Island, BC	After viewing Bob Turners I think it complete insanity to build a gravel mine in Howe Sound,,, Anywhere ! Save Howe Sound !!	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1288	354 - 1	Personal Information Withheld	Squamish, BC	Burnco if allowed to extract and use this property should return that parcel back to the crown or create a park when they are finished rather than selling it off to some developer or commercial project like LNG. There is practically no public access to land in Howe sound and mcNabb access should be protected for the public who use it and the animals that live there.	<p>A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit. A marine-access campsite or park is not contemplated for the site which is located on privately-held land.</p> <p>Progressive and ongoing reclamation activities will occur throughout all phases of mine development. The Proposed Project will use progressive reclamation of the site that includes ongoing reclamation activities taking place alongside active extraction and pit area around the proposed operations area. Site planning will include landscaping, further design and development of the existing berm along the north edge logging road of the pit area, along with the creation of southern pit containment berm, surface water features, fisheries habitats and vegetation throughout the site consistent with the operational extraction schedule. Ongoing monitoring will be conducted for relevant noise and dust, water quality parameters, and fish, vegetation and wildlife resources. Details regarding the monitoring program (in addition to the reclamation monitoring suggested in the plan) is provided in Volume 3, Part E – Section 17.0 of the EAC Application/EIS.</p>
1289	355 - 1	Rudi and Gillian Darling Kovanic	Bowen Island, BC	We are writing this letter to express our strong opposition to the Alberta/Texas aggregate company BURNCO's application to construct and operate an open pit sand/ gravel mine and crushing facility proposed in the estuary on the productive fish/salmon bearing McNab Creek on the northwest shore of Howe Sound.	<p>BURNCO is a 104-year old family-owned Canadian company with operations in British Columbia, Alberta, Saskatchewan and Texas.</p> <p>BURNCO has over 1,150 employees (180 in BC) and is Canada's largest independent ready mix concrete and aggregate company.</p> <p>BURNCO's BC operations currently transport sand and gravel by barge from Treat Creek (east of Powell River) and as far away as Port McNeil on northern Vancouver Island, to existing facilities along the Fraser River in Burnaby and Langley.</p>

1290	355 - 2	Rudi and Gillian Darling Kovanic	Bowen Island, BC	As very long time residents of Howe Sound, we are extremely concerned about the severely adverse impact such a project will have on McNab Creek and the overall health of Howe Sound's marine ecosystem.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1291	355 - 3	Rudi and Gillian Darling Kovanic	Bowen Island, BC	BURNCO indicates that the destruction of this sensitive fish habitat will be very profitable for it and create 12 full time jobs. But at what cost to the environment and sustainable economy of Howe Sound?	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

1292	355 - 4	Rudi and Gillian Darling Kovanic	Bowen Island, BC	BURNCO indicates that the destruction of this sensitive fish habitat will be very profitable for it and create 12 full time jobs. But at what cost to the environment and sustainable economy of Howe Sound?	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
1293	355 - 5	Rudi and Gillian Darling Kovanic	Bowen Island, BC	BURNCO indicates that the destruction of this sensitive fish habitat will be very profitable for it and create 12 full time jobs. But at what cost to the environment and sustainable economy of Howe Sound?	BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. The Sustainable Development Framework for the proposed Project is presented in Section 2.5.4.2 of the EAC Application/EIS.

1294	355 - 6	Rudi and Gillian Darling Kovanic	Bowen Island, BC	As you are aware, after decades of industrial abuse making Howe Sound North America's most toxic mining waste site, about \$45 million of our tax payers dollars were spent cleaning up the Sound. Living on the shores of Howe Sound for almost 30 years, we have been delighted to see this investment of our tax dollars pay off with recovering fish populations and the concomitant recovery of sea mammal populations. While almost never seen in the first 15 to 20 years here, now almost weekly for the past decade we see cetaceans feeding. For example, last week we saw two rare false killer whales heading up Howe Sound. And a few days later we saw a vast, dense school of anchovies swimming along the shoreline. The size of this school was astonishing -- stretching over 220 feet in length, 50 feet wide and two to three feet depth. It's these rebounding stocks that are sustaining Howe Sound's recovering humpbacks and a myriad of other species.	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
1295	355 - 7	Rudi and Gillian Darling Kovanic	Bowen Island, BC	BURNCO's own consultants have identified 21 species that are on the Species at Risk list that will be negatively impacted by this proposed open pit gravel mine in McNab Estuary.	Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.  The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.  A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.

1296	355 - 8	Rudi and Gillian Darling Kovanic	Bowen Island, BC	<p>In this age of rapid species disappearance and extinction across Canada and around our planet, can you imagine a more heartening and positive environmental story than the 'Great Howe Sound Recovery' and just 20 kilometers from Canada's the third largest city. For once, a positive story and in the backdoor 'play ground' to be enjoyed by Vancouver's 2.5 million people. Breath-taking!</p> <p>However, as we also witness daily, this recovery is still extremely fragile. Howe Sound remains largely unprotected and with no long term land use plan. Caught between many different political jurisdictions and impacted by rapidly rising ocean temperatures and acidification, the fragile ecosystem of Howe Sound remains at risk; with highly unusual and unprecedented marine occurrences like starfish wasting disease that continues to cause mysterious and dramatic die-offs along the Pacific coast from Mexico to Alaska including Howe Sound. Dr. Martin Haulena, veterinarian for the Vancouver Aquarium recently said, "This (wasting disease) is, if not THE, certainly one of the biggest wildlife die-offs that have ever been recorded, and we're not just talking marine die-offs." The summer of 2016 also saw a highly unusual and unprecedented explosion of phytoplankton causing the waters of Howe Sound (and Georgia Strait) to turn bright, almost florescent green. While the causes of these alarming phenomenon are still be investigated, scientists agree on the scale of the problem and say evidence points to rising ocean acidification.</p>	<p>Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
1297	355 - 9	Rudi and Gillian Darling Kovanic	Bowen Island, BC	<p>The impact of the noise, light and air pollution and the ugly scar of an open pit mine in one of the most beautiful fjords in the world and a BC landmark on the Sea to Sky corridor, will be immense.</p>	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.</p>

1298	355 - 10	Rudi and Gillian Darling Kovanic	Bowen Island, BC	The impact of the noise, light and air pollution and the ugly scar of an open pit mine in one of the most beautiful fjords in the world and a BC landmark on the Sea to Sky corridor, will be immense.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
1299	355 - 11	Rudi and Gillian Darling Kovanic	Bowen Island, BC	The impact of the noise, light and air pollution and the ugly scar of an open pit mine in one of the most beautiful fjords in the world and a BC landmark on the Sea to Sky corridor, will be immense.	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>

1301	355 - 13	Rudi and Gillian Darling Kovanic	Bowen Island, BC	<p>It will damage BC's multi-billion dollar tourism industry, as well as having a negative impact on the recreational and commercial fishers, tourism operators, boaters, resident and recreational property owners and numerous children's camps with, literally thousands of campers each year that currently enjoy Howe Sound's ecosystem. There is a great potential in Howe Sound to continue to grow the tourism industry with significant economic multipliers that could accrue to the local economy. The area is used extensively by the movie and TV production sector for filming. Reindustrialization would put this at risk and, as taxpayers and residents, we are absolutely not prepared to take this risk.</p> <p>SUMMARY OF OBJECTIONS: 1. Why would anyone develop a gravel mine in Vancouver's ocean playground, an area of outstanding natural beauty? This is where an ever growing city comes to sail, dive, kayak, fish, camp and hike. Tourists flock from all over the world to see "SuperNatural, British Columbia", how would a gravel pit look in the tourism advertising?</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
1302	355 - 14	Rudi and Gillian Darling Kovanic	Bowen Island, BC	<p>2. Howe Sound is only now showing encouraging signs of environmental recovery after decades of industrial misuse. Should we now allow a reindustrialization of the area?</p>	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>

1304	355 - 16	Rudi and Gillian Darling Kovanic	Bowen Island, BC	3. How can we consider developing a massive 77 hectare pit which will excavate the entire McNab estuary from one side of the valley to the other, completely eliminating one of only three river estuaries in Howe Sound, without developing an integrated, long term land and water use plan for the whole of Howe Sound?	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1305	355 - 17	Rudi and Gillian Darling Kovanic	Bowen Island, BC	3. How can we consider developing a massive 77 hectare pit which will excavate the entire McNab estuary from one side of the valley to the other, completely eliminating one of only three river estuaries in Howe Sound, without developing an integrated, long term land and water use plan for the whole of Howe Sound?	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
1306	355 - 18	Rudi and Gillian Darling Kovanic	Bowen Island, BC	4. The size of the gravel pit will limit access to the foreshore for wildlife such as elk, deer and bears who currently frequent the area to forage for food.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

1307	355 - 19	Rudi and Gillian Darling Kovanic	Bowen Island, BC	5. The excavation of the river estuary will dramatically change the movement of water through the valley and have a significant negative impact on the freshwater habitat.	<p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS.</p> <p>Positive effects on the flows in McNab Creek are predicted to result from reducing the rate of flow loss to the groundwater system. Increased baseflows are also predicted in the foreshore minor streams. Water quality predictions are below applicable Water Quality Guidelines.</p> <p>Groundwater flow is predicted to be less than the baseline during the first 15 years of operation. This loss represents a gain in flow in McNab Creek. Groundwater flow at closure will be controlled through adaptive management of the overflow structure. No water quality parameters are predicted to exceed BCWQG or CCME Guidelines.</p>
1308	355 - 20	Rudi and Gillian Darling Kovanic	Bowen Island, BC	6. The proposed mine developer, Burnco, filed a judicial review application against DFO in BC Supreme Court to ‘strong arm’ the DFO to allow them to proceed to an environmental review. The DFO have since agreed to that review with serious concerns as “the project presents a high risk to Salmon and Salmon habitat”.	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO’s involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>
1309	355 - 21	Rudi and Gillian Darling Kovanic	Bowen Island, BC	7. In addition to the destruction to fish habitat, Burnco’s own consultants believe the mine site could be home to 21 species at risk including a population of Roosevelt Elk re-introduced to McNab Creek in 2001 by the BC Ministry of the Environment.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
1310	355 - 22	Rudi and Gillian Darling Kovanic	Bowen Island, BC	8. The noise from the gravel crushing facility and loading of barges will be significant. It will have a negative impact on the enjoyment of the area by boaters, kayakers, fishermen, tourists and other in Howe Sound. The mine developer has stated at meetings that if the demand is there, they want to run the mining and crushing facilities 24/7, 365 days a year.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>

1311	355 - 23	Rudi and Gillian Darling Kovanic	Bowen Island, BC	8. The noise from the gravel crushing facility and loading of barges will be significant. It will have a negative impact on the enjoyment of the area by boaters, kayakers, fishermen, tourists and other in Howe Sound. The mine developer has stated at meetings that if the demand is there, they want to run the mining and crushing facilities 24/7, 365 days a year.	<p>The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCR noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.</p> <p>Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.</p>
1312	355 - 24	Rudi and Gillian Darling Kovanic	Bowen Island, BC	9. Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>

1315	355 - 27	Rudi and Gillian Darling Kovanic	Bowen Island, BC	10. The mine will have an impact on the economic potential of the Howe Sound area. There is considerable potential in Howe Sound to continue to grow the tourism industry with significant economic multipliers that would accrue to the local economy. A mine absolutely will not add to the beauty of the area but only severely detract.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
1316	355 - 28	Rudi and Gillian Darling Kovanic	Bowen Island, BC	The local residents of this area (and beyond) are committed to preserve the marine ecological viability and sustainability of our treasured Howe Sound.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1317	355 - 29	Rudi and Gillian Darling Kovanic	Bowen Island, BC	However, at this point, and for very justifiable reasons, we are extremely sceptical and disillusioned by the provincial and federal environmental review processes being applied provincially and federally. The environmental review process for another potentially hugely damaging re-industrialization project in Howe Sound, Woodfibre LNG, was the first to be approved after the 2015 election of the Trudeau Liberal government. Despite the new government's promises to revamp this process before putting such projects to the test, they used the extant, deeply flawed Harper Government environmental review process and gave the project the go-ahead. We, the public were not heard, thus giving democracy in our country a very black eye.	The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.  Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.

1318	355 - 30	Rudi and Gillian Darling Kovanic	Bowen Island, BC	The scientific research done (by the proponents themselves) for that project was deeply flawed as was the assessment of the actual fisheries values of Howe Sound.	<p>BURNCO engaged an independent and reputable team of qualified scientists and EA practitioners from Golder Associates Ltd. to conduct the required studies and prepare and environmental assessment for the Proposed Project. Golder is a global, employee-owned company with over 50 years of experience. They have over 400 BC-based staff involved in environmental assessment and related activities. All of Golder's work undergoes a high level of quality control and technical review. In addition, some of Golder's work for this project – specifically the groundwater modelling of the proposed mine plan – was subject to third-party technical review prior to being relied upon for the assessment.</p> <p>The qualifications and experience of the EA Project Team is presented in Section 2.1.1. of the EAC Application/EIS. Their work will be subject to further technical review through the ongoing EA review process.</p> <p>Many of the studies undertaken and changes made to the Proposed Project were a direct result of our consultants findings and recommendations.</p> <p>BURNCO is a 104-year old company that has built a reputation as a responsible resource developer. We depend upon independent assessments such as those conducted for the EA to help ensure we protect our reputation and don't put our business at risk.</p>
1319	355 - 31	Rudi and Gillian Darling Kovanic	Bowen Island, BC	Also the public comments received for that project were the highest number of public submissions for any project in the history of Canada and over 94% of these submissions were opposed to the project. Absolutely no social license was granted for that industrial project for Howe Sound by the vast majority of the 12,000 residents who live here, exposing a ugly tear in our democratic process.	<p>The Proposed Project was thoughtfully designed to be environmentally responsible, sensitive to the environment of the proposed site while making use of existing conditions. Since the initial design, the project has changed considerably. Revisions and refinements have been made in response to our Project Team's feedback and to comments and concerns raised by regulatory agencies, Aboriginal Groups and the public.</p> <p>A few examples of project considerations, and subsequent changes and components designed to address feedback received to date include:</p> <ul style="list-style-type: none"> <li>- The project life has been reduced from 20-30 years to 16 years, and the maximum depth of excavation has been reduced from 55 metres to 35 metres;</li> <li>- There are no proposed discharges to, or withdrawals from, McNab Creek;</li> <li>- Using existing BC Hydro lines to electrically powered equipment to extract, process and load the aggregate resource to limit exhaust emissions from the burning of fossil fuels;</li> <li>- Reduced the size of the pit lake as the northern edge has been moved away from the McNab Creek Flood Protection Dyke.</li> <li>- Pit lake designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. The elevation of the pit lake will also be used to manage base flows in the natural groundwater watercourses below the pit lake.</li> <li>- Revised the size and location of the processing area to avoid identified fish habitat and to mitigate potential noise effects.</li> <li>- Revised stockpile location and design to limit potential operational noise effects.</li> <li>- Refined berm design and location to limit potential noise and air quality effects.</li> <li>- Areas progressively reclaimed during the operational phase will be re-vegetated to control erosion.</li> <li>- Maintained tree buffer on foreshore to limit noise effects, dust emissions, and visual effects.</li> <li>- Replaced wash water sedimentation ponds and associated discharges with a 95% efficient wash plant that uses recycled water from two large storage tanks. The 5% loss (via retention, evaporation and absorption) will be supplemented with make-up water from a ground water well. No wash water will be discharged.</li> <li>- Fines generated from the crushing, screening, washing of material will be extracted from the wash water and mechanically dried and compressed into sediment cakes which will be used in progressive reclamation of the onsite fines disposal area.</li> <li>- Covered or enclosed Project components and/or operating under wet conditions (e.g., fine water spray) to reduced potential</li> </ul>

1320	355 - 32	Rudi and Gillian Darling Kovanic	Bowen Island, BC	This project has previously been turned down twice for consideration by the Province of BC.	Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO's involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.  Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.
1321	355 - 33	Rudi and Gillian Darling Kovanic	Bowen Island, BC	And now with threats from climate change and its impact upon our ecosystem, it's even less appropriate and justifiable.	A detailed assessment of potential climate change effects of the Proposed Project is presented in Volume 2, Part B – Section 5.8 of the EAC Application/EIS. Potential effects considered were changes in GHG emissions as a result of the Project, the Project's contribution to climate change through the emission of GHG's, and how potential changes in climate will affect project-related infrastructure.  Proposed mitigation includes the use of electricity instead of fossil fuels, routine maintenance of vehicles, and minimizing idling of vehicles and tugs. Mitigation measures that will reduce GHG emissions are consistent with specific actions within the Seas-to-Sky Air Quality Management Plan.  Following the application of proposed mitigation, the contribution of the proposed Project GHG emissions to provincial, federal and global totals were determined to be negligible.
1322	355 - 34	Rudi and Gillian Darling Kovanic	Bowen Island, BC	For this reason we are requesting that the Canadian Environmental Assessment Agency and the BC Environmental Assessment office fulfill their mandate as true environmental assessors and turn down this unacceptable open pit gravel mine proposal for McNab Creek, Howe Sound. A NO decision will go a long way to restoring our faith in the review process and our government agencies. Thank you for your attention to this critical issue.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1323	356 - 1	Julia Watson	Gambier Island, BC	As a property owner in Howe Sound I am opposed to the Burnco mining project.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1324	356 - 2	Julia Watson	Gambier Island, BC	<p>McNab Creek Estuary provides nutrient rich stream waters that fertilize the ocean and create rich and productive ecologies. It is a delicate ecosystem still recovering from past logging. Approval of the Burnco proposal will return the area to an industrial zone.</p> <p>Despite Burnco's proposed mitigation measures, damage to this recovering ecosystem will be unavoidable.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1325	356 - 3	Julia Watson	Gambier Island, BC	<p>Environmental Concerns:</p> <ul style="list-style-type: none"> <li>• Damage to salmon, herring and other marine life</li> </ul>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

1333	357 - 1	J. L. R. Hughes	West Vancouver, BC	With due negotiation on measures to minimize local impact on recreational activities this historic quarry should be allowed to proceed. Howe Sound is not a residential suburb or Provincial Park. I am a recreational boater on our coast and particularly Howe Sound since 1940, a yacht club member for 52 years (now 88 years old) and still boating in Howe Sound, where there still is considerable industrial activity, merchant ships and ferries. Economic production of quarry rock where it occurs is important to our free enterprise construction industry. It is very evident that many kayaks and even standup boards are common in Howe Sound and are not daunted by the variety of other traffic. The yacht clubs across from the quarry are naturally particularly unhappy about the proposal, and maximum mitigation should be applied. Apart from that, there are not a large number of residents and cottages on the Howe Sound islands. There is an authorized logging operation proceeding on Gambier Island not far from the subject quarry.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1334	358 - 1	Personal Information Withheld	North Vancouver, BC	I think it's a horrible idea that Burnco wants to build a gravel pit on one of the last estuaries around and it will effect animals, surrounding cabins and docks in the area with loud noises and barges coming in and out.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>

1340	358 - 7	Personal Information Withheld	North Vancouver, BC	This area is enjoyed by many, go extend a current gravel pit if need be, do not create one on this beautiful land for really no reason.	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>
1341	358 - 8	Personal Information Withheld	North Vancouver, BC	This area is enjoyed by many, go extend a current gravel pit if need be, do not create one on this beautiful land for really no reason.	A further source of aggregate material is required to ensure the reliability of supply. Securing alternate suppliers is not the preferred long-term option for BURNCO as there is too much uncertainty surrounding the ability to supply aggregate material during times of increased demand, in addition to the inability to control the quality and price of material.
1342	359 - 1	Stephen Zimmerman	McNab Creek, BC	Noise and Vibration study completely voids peak volume readings. Peak volume readings are very important in an environment assessment, As someone who is neighboring the project, What exactly I am going to be listening too?. Peak volumes should be available in an environmental assessment of this scale.	In the absence of formal guidance, the environmental noise from the Project was assessed in accordance with noise regulations specified by the BC Oil and Gas Commission in the document British Columbia Noise Control Best Practices Guideline, by Health Canada in Useful Information for Environmental Assessments, and in the SCR D's Noise Control Bylaw. These guidelines do not provide noise limits for peak sound levels. Energy equivalent noise level (Leq) measurements and noise limits include all of the acoustic energy including any noise peaks.
1343	360 - 1	Glenda Swards	Gibsons, BC	Please don't approve BURNCO Rock Products application to build a large scale open pit gravel mine in the McNab Creek Valley in Howe Sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1344	360 - 2	Glenda Swards	Gibsons, BC	There has already been widespread opposition to this project and we don't understand how they can apply again when they have already been turned down.	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO's involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>

1345	360 - 3	Glenda Swards	Gibsons, BC	A large scale open pit gravel mine will threaten the McNab Creek estuary which is vital habitat for salmon and other species at risk. Please deny their request.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1346	360 - 4	Glenda Swards	Gibsons, BC	A large scale open pit gravel mine will threaten the McNab Creek estuary which is vital habitat for salmon and other species at risk. Please deny their request.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1347	361 - 1	Personal Information Withheld	Bowen Island, BC	I do not want to see this kind of damaging industry in this beautiful natural area. We are finally beginning to see significant recovery of important habitat and species here and this is another ill considered proposal that will hurt, not help in this recovery.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>

1348	362 - 1	Shas Cho	Boston Bar, BC	The time has come to stop raping the earth for profits and to protect our land, water, air and animals. Let's celebrate our pristine creeks and rivers rather than selling them to the greediest bidder. Please DENY this application. Thank you.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1349	363 - 1	Personal Information Withheld	Hazelton, BC	Salmon habitat is crucial to our needs.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
1350	363 - 2	Personal Information Withheld	Hazelton, BC	There are other places to get gravel that do not cause as much disaster.	Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.
1351	363 - 3	Personal Information Withheld	Hazelton, BC	There are other places to get gravel that do not cause as much disaster.	Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.  The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.  A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.
1352	364 - 1	Paul Akerhielm	Lions Bay, BC	I am strongly against the proposal to site a gravel mine on Howe Sound	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1353	365 - 1	Paul Akerhielm	Lions Bay, BC	Howe Sound is the "jewel in the crown" of Pacific North-West fjords and inlets, an area of outstanding natural beauty, and remarkably accessible to lower mainland residents and visitors. Boaters, kayakers, cruise ships, hikers, climbers and shoreline tourists all gain tremendous value and satisfaction from this glorious Sound.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
1354	365 - 2	Paul Akerhielm	Lions Bay, BC	Yet this precious asset has been deplorably and wilfully neglected by Provincial, Federal and Municipal Governments for decades. Almost anywhere else in the developed world there would be a master plan and strong protections in place to preserve such an outstanding natural asset for future generations, particularly given its proximity to the lower mainland. However, instead, we have Provincial and Federal governments that seriously consider it appropriate to site new LNG plants and gravel pits on its shores.	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
1355	365 - 3	Paul Akerhielm	Lions Bay, BC	They commendably and expensively clean up Britannia Mine, then soon after start considering new sources of visual ugliness, pollution & noise. Its as if our governments live on another planet, and that Beautiful British Columbia is just an electioneering slogan, and they have no idea what Howe Sound is all about, how outstandingly beautiful it is, and how many hundreds of thousands of people it benefits every year.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

1359	365 - 7	Paul Akerhielm	Lions Bay, BC	I am strongly against the Burnco gravel mine proposal. Every summer, I spend significant and precious time boating in the area between McNab Creek and Anvil Island, primarily because of its great beauty and total peacefulness. It is rare to find a completely silent beautiful place so close to Vancouver. The Burnco mine would destroy this precious area, with its mining noise, pollution and visual ugliness.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1360	365 - 8	Paul Akerhielm	Lions Bay, BC	Considerable progress has been made in cleaning up the air and water of Howe Sound over the past 40 years I have known it. A great deal of money and effort has been expended, and the results are impressive. It would be a tragedy and dereliction of responsibility to future generations to resume the industrialisation of Howe Sound.	BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. The Sustainable Development Framework for the proposed Project is presented in Section 2.5.4.2 of the EAC Application/EIS.
1361	366 - 1	Justin Finn	North Vancouver, BC	Please do not allow Burnco to proceed with this project in any way.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1362	366 - 2	Justin Finn	North Vancouver, BC	The destruction of salmon and marine riparian habitat is a major issue.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
1363	366 - 3	Justin Finn	North Vancouver, BC	Noise and greenfield development issues, as well as a lack of situation the development within a greater development framework for Howe Sound are further reasons to not approve the project	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCR noise bylaw was considered as part of the assessment.

1364	366 - 4	Justin Finn	North Vancouver, BC	Noise and greenfield development issues, as well as a lack of situation the development within a greater development framework for Howe Sound are further reasons to not approve the project	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
1365	367 - 1	Personal Information Withheld	Squamish, BC	Howe Sound should never get industrialized again. How can a proposal like this one even be on the table. Why do we need to invest our time again and again to tell this government that Howe Sound should be protected.	The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.  Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.
1366	367 - 2	Personal Information Withheld	Squamish, BC	1. Why would anyone develop a gravel mine in Vancouver’s ocean playground, an area of outstanding natural beauty? This is where an ever growing city comes to sail, dive, kayak, fish, camp and hike. Tourists flock from all over the world to see “SuperNatural, British Columbia”, how would a gravel pit look in the tourism advertising?	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
1367	367 - 3	Personal Information Withheld	Squamish, BC	2. Howe Sound is only now showing encouraging signs of environmental recovery after decades of industrial misuse. Should we now allow a reindustrialization of the area?	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
1368	367 - 4	Personal Information Withheld	Squamish, BC	2. Howe Sound is only now showing encouraging signs of environmental recovery after decades of industrial misuse. Should we now allow a reindustrialization of the area?	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.

1373	367 - 9	Personal Information Withheld	Squamish, BC	6. The proposed mine developer, Burnco, filed a judicial review application against DFO in BC Supreme Court to ‘strong arm’ the DFO to allow them to proceed to an environmental review. The DFO have since agreed to that review with serious concerns as “the project presents a high risk to Salmon and Salmon habitat”.	<p>Documentation of government agency consultation is provided in Volume 1, Part A – Section 3 of the EAC Application/EIS. Key issues raised by government agencies and First Nations are presented and the nature and extent of their involvement is described, including participation on the Technical Working Group established to review the Proposed Project. A summary of the federal EA review, including DFO’s involvement is specifically addressed and responses to concerns related to potential effect effects on fish and fish habitat are provided.</p> <p>Detailed issues tracking tables are provided in Volume 4, Part G – Section 22.0: Appendix 2-A (Technical Working Group), Appendix 2-B (Aboriginal), and Appendix 2-C (Public) of the EAC Application/EIS.</p>
1374	367 - 10	Personal Information Withheld	Squamish, BC	7. In addition to the destruction to fish habitat, Burnco’s own consultants believe the mine site could be home to 21 species at risk including a population of Roosevelt Elk re-introduced to McNab Creek in 2001 by the BC Ministry of the Environment.	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
1375	367 - 11	Personal Information Withheld	Squamish, BC	8. The noise from the gravel crushing facility and loading of barges will be significant. It will have a negative impact on the enjoyment of the area by boaters, kayakers, fishermen, tourists and other in Howe Sound. The mine developer has stated at meetings that if the demand is there, they want to run the mining and crushing facilities 24/7, 365 days a year.	<p>A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the EAC Application/EIS.</p> <p>Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.</p>

1376	367 - 12	Personal Information Withheld	Squamish, BC	8. The noise from the gravel crushing facility and loading of barges will be significant. It will have a negative impact on the enjoyment of the area by boaters, kayakers, fishermen, tourists and other in Howe Sound. The mine developer has stated at meetings that if the demand is there, they want to run the mining and crushing facilities 24/7, 365 days a year.	<p>The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCR noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.</p> <p>Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.</p>
1377	367 - 13	Personal Information Withheld	Squamish, BC	9. Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>

1378	367 - 14	Personal Information Withheld	Squamish, BC	<p>9. Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.</p>	<p>A predictive noise model was developed for the Proposed Project as described in Volume 2, Section 9.2. The Type 7810 Predictor® (Predictor®) software was used to assess the potential noise effects associated with the Proposed Project as well as the effectiveness of potential noise controls.</p> <p>Effects to wildlife related to noise were estimated by overlaying the output of noise models with species-specific habitat suitability mapping and summarizing the change in habitat for VCs for which noise thresholds were defined in literature (i.e., amphibian species at risk, northern goshawk, western screech-owl, marbled murrelet, and common nighthawk). Noise thresholds beyond which habitat loss is expected are defined for each VC in Section 5.3.1.5.2 of Vol 2, Section 5.3.</p> <p>Due to the paucity of literature regarding noise thresholds for Roosevelt elk and grizzly bear, effects of noise and other sensory disturbance were measured using published zones of influence (ZOI). A ZOI represents the distance at which avoidance of certain anthropogenic disturbances has been observed.</p> <p>Noise will be managed during the construction and operational phases according to the Environmental Objectives and Best Management Practices for Aggregate Extraction in BC (BC MWLAP 2002). Noise mitigation measures are detailed in Volume 2, Part B - Section 9.2 and include:</p> <ul style="list-style-type: none"> <li>- Maintaining vegetation and trees around the active work areas to act as a noise buffer;</li> <li>- Reducing the height aggregate falls along conveyors and within the crushing facility;</li> <li>- Enclosing conveyors which will assist in reducing noise emissions;</li> <li>- Minimizing speed on roadways;</li> <li>- Operating equipment within specifications and maintaining level roads; and</li> <li>- Reducing idling time.</li> </ul>
1379	367 - 15	Personal Information Withheld	Squamish, BC	<p>9. Noise and light pollution will have significant negative impacts on the land and aquatic animals in the area. Noise and vibration pollution have been found to negatively impact the ability of marine mammals to communicate, navigate, find food and it is believed increasingly to impact their fertility.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

1380	367 - 16	Personal Information Withheld	Squamish, BC	10. The mine will have an impact on the economic potential of the Howe Sound area. There is considerable potential in Howe Sound to continue to grow the tourism industry with significant economic multipliers that would accrue to the local economy. A mine is not going to add to the beauty of the area.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
1381	367 - 17	Personal Information Withheld	Squamish, BC	How can you help?  Howe Sound needs to be protected for the enjoyment of both current and future generations so we are asking you to be an ambassador for Howe Sound in telling the government that you support the recovery of Howe Sound.  Let's be smart and think of ways how to protect this place and not re-industrialize it again.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1382	368 - 1	Personal Information Withheld	Bowen Island, BC	if the risks can be mitigated, then I am in favour, if it creates jobs for local people.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1383	369 - 1	Laurie Parkinson	Bowyer Island, BC	A regional demand for additional aggregate has not been demonstrated.  The Vancouver market requirement for an additional gravel and aggregate source is not supported by the proponent's documentation. A greater profit margin for the proponent should not be grounds for destroying the estuary of McNab Creek.  A supply/demand report showing strong evidence of the need for supply from this location (and the unavailability of supply from established locations), such as has been done for the Okanagan region, should be prepared before considering a permit for this project. See: <a href="https://www.regionaldistrict.com/media/112368/2013_11_08_Full_Report_Aggregate_Supply_and_Demand_Update_and_Analysis.pdf">https://www.regionaldistrict.com/media/112368/2013_11_08_Full_Report_Aggregate_Supply_and_Demand_Update_and_Analysis.pdf</a>	The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resource is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.  Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by: - Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC; - Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and - Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.  The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.

1388	372 - 1	Yuko Godoy-Toku	Lions Bay, BC	Please save the beautiful Howe sound. It is for all our future.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1389	373 - 1	Laurie Parkinson	Bowyer Island, BC	Loss of both salmon and protected rock fish habitat.  Vancouver Aquarium VP Jeff Marliave confirmed in a 2014 interview with Larry Pynn that the McNab Creek estuary is relatively pristine. There are unmapped creeks with coho salmon in the McNab Valley that gravel extraction will kill. There are lots of rockfish that live at the dropoff right off the estuary. The rock fish habitat would be damaged by this operation.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
1390	373 - 2	Laurie Parkinson	Bowyer Island, BC	Loss of both salmon and protected rock fish habitat.  Vancouver Aquarium VP Jeff Marliave confirmed in a 2014 interview with Larry Pynn that the McNab Creek estuary is relatively pristine. There are unmapped creeks with coho salmon in the McNab Valley that gravel extraction will kill. There are lots of rockfish that live at the dropoff right off the estuary. The rock fish habitat would be damaged by this operation.	A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.  An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.  The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyer) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.  The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.

1391	373 - 3	Laurie Parkinson	Bowyer Island, BC	<p>From reading the mitigation for salmon proposed by Burnco, it's obvious that much more salmon habitat would be eliminated than would be created....and the new salmon habitat might not work. There is no mention of mitigation for rock fish habitat.</p> <p>Use the precautionary principle well, and reject this proposal.</p>	<p>The proposed Project will lead to the loss of approximately 200 m2 of spawning habitat in the upper section of WC2 however, this loss is addressed by the Fish Habitat Offset Plan (Appendix 5.1-B). The offset plan proposes to extend the length of the existing lower section of WC2 by approximately 790 m. The proposed design for the channel extension uses the existing lower channel as a template and it will meet the factors and criteria that are generally accepted for the construction of a functional groundwater-fed spawning channel. It should provide conditions similar to the existing run habitat in the lower section of WC2 that was designed as chum spawning habitat by DFO and where spawning activity was observed during the November 2016 survey.</p> <p>The creation of the pit lake is predicted to cause a doubling of groundwater influx into the lower section of WC2. The increase in ground water influx will lead to additional groundwater upwelling and the increased upwelling is expected to provide increased levels of intergravel flow that will be suitable for eggs and alevins. The average depth in the proposed offset habitat extension and the remaining section of WC2 is predicted to be above 0.3 m making it suitable for salmon spawning. As described in the Aquatic Health assessment provided in Surface Water Resources (Section 5.5.7.2), the water quality and temperature of ground and surface water entering the offset habitat and existing lower section of WC2 will be suitable for salmonids to complete all stages of their life history including spawning.</p> <p>In response to comments from the Technical Working Group, the design of the habitat offset plan was revised to allow approximately 20 m of pool habitat upstream of the culvert and approximately 20 m of gravel bed run habitat downstream of the culvert to be retained which will avoid approximately 232 m2 of habitat loss. The design of the channel extension incorporates run and pool habitat in approximately a 1 : 1 ratio, based on this design and the use of run habitat for spawning in the existing lower channel it is expected that more than 2, 000 m2 of the offset channel habitat will provide conditions suitable for salmonid spawning.</p>
1392	373 - 4	Laurie Parkinson	Bowyer Island, BC	<p>Use the precautionary principle well, and reject this proposal.</p>	<p>BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. 1397	374 - 5	Laurie Parkinson	Bowyer Island, BC	To do so would represent atrocious planning, with little/no obvious compensating factors. It should not be permitted.	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
1398	374 - 6	Laurie Parkinson	Bowyer Island, BC	To do so would represent atrocious planning, with little/no obvious compensating factors. It should not be permitted.	<p>Accepted EA practice in BC and Canada includes the identification of mitigation measures that are technically and economically feasible (i.e., practical) means of preventing or reducing to an acceptable level any potential adverse effect of the proposed project. BCEAO (2013) considers mitigation to be any practical means or measures taken to avoid, minimize, restore on-site, compensate, or offset the potential adverse effects of a project. Compensation means measures taken to further reduce the residual effect, and may include direct physical measures (e.g., habitat enhancement, restoration or creation on, near or away from the project site), or financial mechanisms that have the outcome of reducing the residual effect (e.g., contributions to research, recovery plans, population enhancement programs for endangered species). Offset is defined in the BCMOE's Procedures for Mitigating Impacts on Environmental Values (2012) as means to counteract, or make up for, a residual impact on an environmental component.</p> <p>Potential effects on McNab Creek are being mitigated through avoidance. There are no proposed discharges to or withdrawals from McNab Creek. The pit lake is being designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. Similarly, the size and location of the processing area was selected to avoid identified fish habitat.</p> <p>Examples of mitigation measures to reduce or minimize potential effects are:</p> <ul style="list-style-type: none"> <li>- Sediment and erosion control planning and monitoring the effectiveness of prescribed measures</li> <li>- Restricting clearing of wildlife habitat during breeding and calving periods, bird nesting periods and elk overwintering</li> <li>- Installing nest boxes for Western screech-owls in nearby forest habitat</li> <li>- Maintaining vegetation linkages and buffers to minimize habitat fragmentation and to allow escape routes for large mammals.</li> <li>- Monitoring for marine mammals during impact pile driving activities and maintaining a marine mammal safety zone based on injury noise threshold criteria.</li> </ul> <p>Examples of compensation or offset measure are:</p> <ul style="list-style-type: none"> <li>- Constructing a 790 metre extension of the lower segment of groundwater channel WC2 that will collect surface flow diverted through loss of the upper segment of WC2. This offset will increase the wetted area of the lower segment of WC2.</li> <li>- Establishing 1,250 m<sup>2</sup> of new amphibian breeding ponds to offset the loss of existing amphibian habitat.</li> </ul>

1399	375 - 1	Jim Whitworth	Ucluelet, BC	Yes, It's a great idea to trash the environment, to make money for the big corporations. I mean what's more important clean water, air you breathe and land that sustains life or a stinking big pile of money for the ever greedy wealthy? I guess that question has been answered by the actions of the current government. Big money, at least in B.C. aces the environment every time.	Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1400	376 - 1	Davina Dube	Vancouver, BC	I am concerned with the wildlife, and fish habitat that Burnco Aggregate will be destroying if this project goes along. Not to mention the Salmon spawning habitat up the McNab Creek. We need to protect all of our Salmon habitat that we have left. It is critical that we protect the Howe Sound. With the millions of dollars invested in the clean up of Howe Sound and the reestablishment of an elk herd in the area it would seem to be a waste of tax payer money to just go destroy it all over again.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1401	376 - 2	Davina Dube	Vancouver, BC	I am concerned with the wildlife, and fish habitat that Burnco Aggregate will be destroying if this project goes along. Not to mention the Salmon spawning habitat up the McNab Creek. We need to protect all of our Salmon habitat that we have left. It is critical that we protect the Howe Sound. With the millions of dollars invested in the clean up of Howe Sound and the reestablishment of an elk herd in the area it would seem to be a waste of tax payer money to just go destroy it all over again.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.

1410	381 - 1	Laurie Parkinson	Bowyer Island, BC	<p>Insufficient data for at-risk species baselines.</p> <p>For several key aquatic and land-based species (such as anadromous salmon, resident cutthroat trout, and Roosevelt elk), population data was collected over far too narrow a timespan to be useful for establishing accurate baselines. Without accurate baselines, quantitative monitoring for the effects of this project will not be possible.</p> <p>Part-year data is utterly insufficient to establish accurate baselines. At least 5 years of data should be collected to afford accurate baselines usable for ongoing monitoring of effects on species populations and habitat. Local authorities (ie SCRD) should have the power to compel a reduction, suspension, or cessation of mine activities where habitat damage exceeds pre-arranged norms.</p>	<p>The Assessment Methodology for the EAC Application/EIS reflects accepted EA practice in BC and Canada. The baseline studies conducted are sufficient for the purpose of assessing potential effects of the Proposed Project on selected Valued Components. Additional years of supplemental field studies are not required or proposed for the assessment.</p> <p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS. Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., give years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>
1411	382 - 1	Personal Information Withheld	Howe Sound, BC	<p>After a review of the proponents project documents I am concerned that the project will have significant impact on a productive estuary and only result in a few local jobs.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

1412	382 - 2	Personal Information Withheld	Howe Sound, BC	After a review of the proponents project documents I am concerned that the project will have significant impact on a productive estuary and only result in a few local jobs.	<p>Details regarding Proposed Project benefits are provided in Volume 1, Part A – Section 2.10 of the EAC Application/EIS.</p> <p>Benefits of the Proposed Project include:</p> <ul style="list-style-type: none"> <li>- capital expenditures (\$21.5 million),</li> <li>- operational expenditures (\$13 million/year),</li> <li>- direct, indirect and induced employment, and</li> <li>- taxation revenue.</li> </ul> <p>Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the uses of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p> <p>BURNCO will enhance local economic benefits by implementing policies and practices to support local hiring and procurement when possible.</p> <p>Other benefits or positive effects of the Proposed Project are:</p> <ul style="list-style-type: none"> <li>- Increased baseflows, wetted area and average flow depth in McNab Creek and several of the other watercourses;</li> <li>- Increased wetted are in the lower segment of WC2 through the construction of a new 790m groundwater-fed channel;</li> <li>- New amphibian breeding habitat ;</li> <li>- Improved aesthetic qualities of the Property after closure would likely have a positive effect on nearby property use and value, and positive social and recreational effects.</li> </ul>
1413	382 - 3	Personal Information Withheld	Howe Sound, BC	The McNabb Creek area is a key eco-system for juvenile salmon, herring and wintering migratory birds. There is very little riparian or foreshore buffer planned.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

1414	382 - 4	Personal Information Withheld	Howe Sound, BC	The extraction of gravel will affect groundwater flows into and out of the creek.	<p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS.</p> <p>Positive effects on the flows in McNab Creek are predicted to result from reducing the rate of flow loss to the groundwater system. Increased baseflows are also predicted in the foreshore minor streams. Water quality predictions are below applicable Water Quality Guidelines.</p> <p>Groundwater flow is predicted to be less than the baseline during the first 15 years of operation. This loss represents a gain in flow in McNab Creek. Groundwater flow at closure will be controlled through adaptive management of the overflow structure. No water quality parameters are predicted to exceed BCWQG or CCME Guidelines.</p>
1415	382 - 5	Personal Information Withheld	Howe Sound, BC	The potential for damage to the estuary by silt, noise and foreshore activities (oil, fuel or hydraulic fluid spills, light pollution, vibration) is significant.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. 1417	382 - 7	Personal Information Withheld	Howe Sound, BC	The loss of residents property values is a significant moral issue for the proponents.	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
1418	382 - 8	Personal Information Withheld	Howe Sound, BC	There is no discussion of what will happen to the sediment load in the mined out pit when the creek berm is overwhelmed by storm flows. These will be deposited over the eel grass beds, smothering the estuary.	<p>A Water Management Plan, currently being prepared for inclusion in the Mines Act and Water Sustainability Act Permit applications, will provide a long-term water management strategy that includes the management of water resources, a mitigation plan to reduce potential effects to water resources and an effects monitoring plan to monitor water resources in the receiving environment. The plan is designed to meeting the preliminary mitigation measures and commitments and assurances outlined in the EAC Application/EIS and those required by the Water Sustainability Act. Based on the water quantity and water quality monitoring programs (hydraulic heads and quality), if observed water levels and water quality start to show a trend towards potential negative effects to the receiving environment, then adaptive management will be undertaken. Adaptive management techniques to be implemented as required include:</p> <ul style="list-style-type: none"> <li>- Continue to evaluate the extent of the pit during operations.</li> <li>- During the wet season, if water levels in the pit lake become higher than has been designed for the Pit Lake Containment Berm then the valves in the culverts will be closed to reduce the amount of water reporting to the pit from the surface water on the western slope.</li> <li>- The height of the pit lake at the outlet structure can be adjusted to increase or decrease the level of the pit lake (e.g., adding or lowering stop logs) at closure to maintain the hydraulic gradient between McNab Creek and the Project Area following closure.</li> </ul>

1419	382 - 9	Personal Information Withheld	Howe Sound, BC	The addition of site lighting will spoil the only area of dark night skies readily accessible from Metro Vancouver (Porteau Cove Park).	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
1420	382 - 10	Personal Information Withheld	Howe Sound, BC	Is the loss of the natural amenities of the area worth a few more dollars for the family interests that own Burnco?	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1421	383 - 1	Laurie Parkinson	Bowyer Island, BC	<p>21 species are officially at risk from Burnco</p> <p>Burnco's consultants documented that the gravel quarry could be home to 21 species officially at risk. This includes Roosevelt elk, re-introduced to McNab Creek in 2001 by the BC Ministry of the Environment.</p>	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

1422	383 - 2	Laurie Parkinson	Bowyer Island, BC	The Precautionary Principle, properly applied, should see this proposal firmly rejected.	BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. The Sustainable Development Framework for the proposed Project is presented in Section 2.5.4.2 of the EAC Application/EIS.
1423	384 - 1	Personal Information Withheld	Gibsons, BC	Please do not destroy the beautiful Howe Sound. It is crazy to be thinking of developing such a massive project. Our environment is our treasure for the future. Enjoy and promote our natural beauty instead of destroying it for the sake of off shore dollars.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1424	385 - 1	Laurie Parkinson	Bowyer Island, BC	Will McNab Creek and the estuary become salty if the gravel quarry is built?  As rock is removed from the mine, fresh water from the estuary will creek into the resulting huge pit (100 football fields wide and 10 stories deep). This will lead to salt water seeping into the estuary, and into McNab Creek. This will kill a variety of salmon, as well as plants that live in the estuary.  Have thorough hydro-logical studies done over several years. Use the precautionary principle. Local authorities (eg SCRDC) should have the power to compel a reduction, suspension, or cessation of mine activities where salination exceeds pre-agreed norms.	The hydraulic conductivity of the valley sediments is much higher than hydraulic conductivity of any bedrock structures, if they exist. Therefore, the groundwater flow in the valley sediments will dominate and it will provide key control on the position of the salt water-freshwater interface. Furthermore, because of topographic highs that surround the valley, the hydraulic heads are expected to be higher than in the valley sediments, inhibiting saltwater ingress. As presented in Section 3.3 in Appendix 5.6-A of the EAC Application/EIS, based on monitoring data (2010-2014), tidal elevations exceeded groundwater elevation only in rare occasions between July and September of each monitoring year. During these high tide intervals, there is an inferred landward gradient in the immediate vicinity of the shoreline; however, its duration is inherently less than the corresponding periods of southwards gradient associated with lower tidal position. Accordingly, the net groundwater flow direction during the entire monitoring period is confirmed to be southwards toward the marine foreshore. Moreover, monitoring data indicate that the saltwater wedge could be located at greater depths than approximately -30 m elevation; analytical calculations based on methodology presented in Domenico and Schwartz (1990) showed that, due to relatively high groundwater flow in the alluvial sediments, the saltwater edge could be depressed to the depth of the overburden/bedrock contact within 50 m to 150 m of the ocean shore. Based on these observations, the potential presence of a fault structure in bedrock in the vicinity of the project area is not considered to influence groundwater flow direction in the valley sediments or increase the risk of saltwater intrusion.
1425	386 - 1	Tim Agg	Vancouver, BC	After many years, I recently had the opportunity to revisit this area of Howe Sound. I've read and share the environmental concerns that have been expressed by several organizations. I can see no pressing economic reason that should prevail over environmental and aesthetic concerns.	Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.  The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.  A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.

1429	387 - 1	Kelly Heilig	Squamish, BC	Howe Sound is in recovery. The herring are back and therefore so are many other species. This is a huge gravel mine that can have a serious impact on this ecosystem. When will we put our country first and value the natural environment over industry? The size of the mine is ridiculous.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>

1430	387 - 2	Kelly Heilig	Squamish, BC	Howe Sound is in recovery. The herring are back and therefore so are many other species. This is a huge gravel mine that can have a serious impact on this ecosystem. When will we put our country first and value the natural environment over industry? The size of the mine is ridiculous.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1431	387 - 3	Kelly Heilig	Squamish, BC	Have Burnco find another site away from the water!	The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.  Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by: - Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC; - Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and - Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.  The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.
1432	387 - 4	Kelly Heilig	Squamish, BC	Have Burnco find another site away from the water!	Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.
1433	388 - 1	Personal Information Withheld	Bowen Island, BC	As a longtime resident of Howe Sound the Burnco Aggregate Project is a very bad idea.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1434	389 - 1	Samantha Taylor	Lions Bay, BC	It would be ridiculous to build a large scale open pit gravel mine in the McNab Creek Valley in Howe Sound, especially considering widespread opposition. This threatens the McNab Creek estuary which is vital habitat for salmon and other species at risk. Stop threatening my home!	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1435	389 - 2	Samantha Taylor	Lions Bay, BC	It would be ridiculous to build a large scale open pit gravel mine in the McNab Creek Valley in Howe Sound, especially considering widespread opposition. This threatens the McNab Creek estuary which is vital habitat for salmon and other species at risk. Stop threatening my home!	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1436	390 - 1	Personal Information Withheld	North Vancouver, BC	I am opposed to this project due to the negative effect it will have on the eco system of the Sound.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. 1441	393 - 1	Linda	Squamish, BC	We have just moved to Howe Sound area. It is one of the most beautiful places in the world and big companies like you and governments just want blow everything up and kill the wildlife and forests. Leave it alone or Earh will no longer be here for you kids on grandkids..etc.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1442	394 - 1	Jane Hambrook	Vancouver, BC	What is the matter with people's thinking. When are you all going to listen to what's happening to our world's environments. We need to put an end to scraping up mountains and their estuaries and their watersheds and their natural mechanisms. There are other alternatives even if they take longer or cost more.	Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.
1443	394 - 2	Jane Hambrook	Vancouver, BC	What the Burnco Aggregate Project destroys now for and equitable cost will be paid for by the environment forever. Can you all not read the environmental information available, can you all not comprehend what you have learnt about environments, can you all live with knowing that you're cheating the future and actually killing things we don't even understand yet? To date WE ONLY HAVE ONE PLANET,that's it, just one.	The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.  Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.
1444	394 - 3	Jane Hambrook	Vancouver, BC	Would love to see alternate and sustainable solutions seriously thought about, developed and implemented for out gravel needs.	BURNCO will support sustainable development by designing, constructing, operating and reclaiming the proposed Project in accordance with practices that reflect environmental, economic, social and cultural sustainability. The Sustainable Development Framework for the proposed Project is presented in Section 2.5.4.2 of the EAC Application/EIS.

1445	394 - 4	Jane Hambrook	Vancouver, BC	Think of me as naive a dreamer or just plain ignorant of the gravel industry, I'm okay with that, but I'm not okay with destroying any part of The Howe Sound's environment.	<p>BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.</p> <p>BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.</p>
1446	395 - 1	Personal Information Withheld	Bowen Island, BC	My family and I have no objection to this project. We all need gravel.	Thank you for your submission. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1447	396 - 1	Lea Allen	Bowen Island, BC	I do not want this gravel mine to proceed. As a tax payer I do not want to have this development operating in the successful Sea to Sky tourist area. This is the wrong place to be digging up gravel!	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
1448	397 - 1	Personal Information Withheld	Bowen Island, BC	I oppose the project for an open pit gravel mine in McNab Creek Valley.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1449	397 - 2	Personal Information Withheld	Bowen Island, BC	Whatever cherry-picked "experts" may claim (remember that experts have their biases and affiliations), this project would devastate the local salmon and bird habitats, which are critical to BC's coastal ecosystems.	<p>BURNCO engaged an independent and reputable team of qualified scientists and EA practitioners from Golder Associates Ltd. to conduct the required studies and prepare an environmental assessment for the Proposed Project. Golder is a global, employee-owned company with over 50 years of experience. They have over 400 BC-based staff involved in environmental assessment and related activities. All of Golder's work undergoes a high level of quality control and technical review. In addition, some of Golder's work for this project – specifically the groundwater modelling of the proposed mine plan – was subject to third-party technical review prior to being relied upon for the assessment.</p> <p>The qualifications and experience of the EA Project Team is presented in Section 2.1.1. of the EAC Application/EIS. Their work will be subject to further technical review through the ongoing EA review process.</p> <p>Many of the studies undertaken and changes made to the Proposed Project were a direct result of our consultants findings and recommendations.</p> <p>BURNCO is a 104-year old company that has built a reputation as a responsible resource developer. We depend upon independent assessments such as those conducted for the EA to help ensure we protect our reputation and don't put our business at risk.</p>

	Ref #	Commenter (Name)	Location		
1455	398 - 4	Personal Information Withheld	Squamish, BC	<p>The Proponent has no experience operating aggregate mine in the marine environment (contrary to claims by the Project Manager, a mine near the Bow River in Calgary does not qualify as “marine”). Their offset plan for mitigating has a huge possibility of not working. Who would be monitoring this closely? The proposed “compensation channel” is key to attempts to mitigate the loss of fish habitat in this project.</p>	<p>The proposed Project will lead to the loss of approximately 200 m<sup>2</sup> of spawning habitat in the upper section of WC2 however, this loss is addressed by the Fish Habitat Offset Plan (Appendix 5.1-B). The offset plan proposes to extend the length of the existing lower section of WC2 by approximately 790 m. The proposed design for the channel extension uses the existing lower channel as a template and it will meet the factors and criteria that are generally accepted for the construction of a functional groundwater-fed spawning channel. It should provide conditions similar to the existing run habitat in the lower section of WC2 that was designed as chum spawning habitat by DFO and where spawning activity was observed during the November 2016 survey.</p> <p>The creation of the pit lake is predicted to cause a doubling of groundwater influx into the lower section of WC2. The increase in ground water influx will lead to additional groundwater upwelling and the increased upwelling is expected to provide increased levels of intergravel flow that will be suitable for eggs and alevins. The average depth in the proposed offset habitat extension and the remaining section of WC2 is predicted to be above 0.3 m making it suitable for salmon spawning. As described in the Aquatic Health assessment provided in Surface Water Resources (Section 5.5.7.2), the water quality and temperature of ground and surface water entering the offset habitat and existing lower section of WC2 will be suitable for salmonids to complete all stages of their life history including spawning.</p> <p>In response to comments from the Technical Working Group, the design of the habitat offset plan was revised to allow approximately 20 m of pool habitat upstream of the culvert and approximately 20 m of gravel bed run habitat downstream of the culvert to be retained which will avoid approximately 232 m<sup>2</sup> of habitat loss. The design of the channel extension incorporates run and pool habitat in approximately a 1 : 1 ratio, based on this design and the use of run habitat for spawning in the existing lower channel it is expected that more than 2, 000 m<sup>2</sup> of the offset channel habitat will provide conditions suitable for salmonid spawning.</p>
1456	398 - 5	Personal Information Withheld	Squamish, BC	<p>Should it fail, even partially, accountability and compensation for the loss should be automatic. Any approval of this proposal should include a contingency bond to fund maintenance of the new streamway, an overflow gate from the pit lake, and a fully-funded alternate solution should the offset plan fail. The bond should also be sufficient to cover site remediation at end-of-project.</p>	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>

1457	398 - 6	Personal Information Withheld	Squamish, BC	<p>Night scapes are enjoyed by the residents and with 80% of the worlds night scapes reduced this needs to be considered. The McNab area (and much of Howe Sound) is currently a dark zone, allowing residents visibility of the wonders of the night sky. Plant lighting will destroy this local value for much of the year</p> <p>Any approval must come with strict (and measurable) restrictions on lighting intensity and local dispersion. Local authorities (eg. SCRD) should have the power to compel a reduction, suspension or cessation of mine activities where light intensities exceed pre-agreed norms.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
1458	398 - 7	Personal Information Withheld	Squamish, BC	<p>Water quality is insufficiently characterized in the application. Removing sediment in the water discharged into the ocean is critical to habitat protection, not least for the nearby eel grass beds and glass sponge reefs.</p> <p>Siltation monitoring (both in the original and compensation channels and in the nearby ocean) , with periodic reporting of results that are auditable and accessible to the public , should be part of any approval of the project. Local authorities (eg. SCRD) should have the power to compel a reduction, suspension or cessation of mine activities where sediment/siltation exceeds pre-agreed norms</p>	<p>Wash water will be processed for removal of fines and silt in a 95% efficient wash plant to be fed using recycled water from two large storage tanks. Fines will not be discharged to the estuary; they will be deposited in a designated inland fines area and covered in accordance with an approved Reclamation and Effective Closure Plan.</p>
1459	398 - 8	Personal Information Withheld	Squamish, BC	<p>Water quality is insufficiently characterized in the application. SCRD) should have the power to compel a reduction, suspension or cessation of mine activities where sediment/siltation exceeds pre-agreed norms</p>	<p>A Water Management Plan, currently being prepared for inclusion in the Mines Act and Water Sustainability Act Permit applications, will provide a long-term water management strategy that includes the management of water resources, a mitigation plan to reduce potential effects to water resources and an effects monitoring plan to monitor water resources in the receiving environment. The plan is designed to meeting the preliminary mitigation measures and commitments and assurances outlined in the EAC Application/EIS and those required by the Water Sustainability Act. Based on the water quantity and water quality monitoring programs (hydraulic heads and quality), if observed water levels and water quality start to show a trend towards potential negative effects to the receiving environment, then adaptive management will be undertaken. Adaptive management techniques to be implemented as required include:</p> <ul style="list-style-type: none"> <li>- Continue to evaluate the extent of the pit during operations.</li> <li>- During the wet season, if water levels in the pit lake become higher than has been designed for the Pit Lake Containment Berm then the valves in the culverts will be closed to reduce the amount of water reporting to the pit from the surface water on the western slope.</li> <li>- The height of the pit lake at the outlet structure can be adjusted to increase or decrease the level of the pit lake (e.g., adding or lowering stop logs) at closure to maintain the hydraulic gradient between McNab Creek and the Project Area following closure.</li> </ul>
1461	398 - 10	Personal Information Withheld	Squamish, BC	<p>There was an inconsistency between the job creation figures shown in 2 different slides in the Open Houses One showed about 300 person-years of employment (over 25 years). The other (derived from input-output analysis) showed person-year employment benefits several times that amount.</p>	<p>The estimated number of jobs created by the proposed Project during construction and operations phases are presented in Section 2.5.4 of the EAC Application/EIS.</p> <p>Employment numbers were presented on three Open House display panels, as follows:</p> <ul style="list-style-type: none"> <li>- Project Specifications: 80 person years during construction and 360 person years during operations (direct, indirect and induced);</li> <li>- Project Benefits: 12 full-time jobs at the site (i.e. direct only);</li> <li>- Sustainable Economy: 119 jobs during construction and 99 jobs during operations (direct, indirect and induced); 33 long-term jobs during operations are expected to be filled by Sunshine Coast residents.</li> </ul>
1462	398 - 11	Personal Information Withheld	Squamish, BC	<p>This misleading discrepancy should be resolved by further analysis, and that section of the application re-submitted, with additional time allowed for public scrutiny and comment.</p>	<p>The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.</p> <p>Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.</p>
1463	399 - 1	Lauren Ollsin	North Vancouver, BC	<p>I had hoped this selfish project proposal would never be reconsidered. Just because the gravel is there and could cheaply be stolen and the estuary ruined, doesn't mean it should be. As a champion of wild fish and as a sailor, I strongly oppose this proposal.</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

1464	399 - 2	Lauren Ollsin	North Vancouver, BC	I had hoped this selfish project proposal would never be reconsidered. Just because the gravel is there and could cheaply be stolen and the estuary ruined, doesn't mean it should be. As a champion of wild fish and as a sailor, I strongly oppose this proposal.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1465	400 - 1	Personal Information Withheld	Howe Sound, BC	<p>"Calgary-based Burnco Rock Products donated \$34,000 to the Liberals, bringing their eight year running total to \$219,700.</p> <p>Burnco has big plans for a large scale gravel mine at McNab Creek at the northern end of Howe Sound. If it gets the green light, it'll crush and process gravel 24 hours a day, 365 days a year." -<a href="http://www.straight.com/news/633181/dermod-travis-outlandish-donations-bc-political-parties">http://www.straight.com/news/633181/dermod-travis-outlandish-donations-bc-political-parties</a></p> <p>This report is 2 years old. How much more has Burnco donated, during an election year, in attempts to grease the wheels that this project goes through.</p> <p>It's been clearly repeated below that the human and environmental impacts of this project are unacceptable. Do the right thing and stop it from happening.</p>	Thank you for this information. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1466	401 - 1	B. Underhill	Bowen Island, BC	No graville pit in McNab Creek.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1467	401 - 2	B. Underhill	Bowen Island, BC	We don't want it and no further tugs, barges shipping the crap down Howe Sound.	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
1468	402 - 1	Kate O'Connor	Squamish, BC	This project will negatively affect the salmon habitat in this environmentally sensitive area. The salmon runs are decreasing and we need to protect McNab creek against industry that will decrease salmon populations.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. 1469	402 - 2	Kate O'Connor	Squamish, BC	The saltwater leeching from the pit into the creek will kill salmon and have disastrous effects to the ecosystem at many levels as the salmon play an integral role in the ecosystem functioning.	The hydraulic conductivity of the valley sediments is much higher than hydraulic conductivity of any bedrock structures, if they exist. Therefore, the groundwater flow in the valley sediments will dominate and it will provide key control on the position of the salt water-freshwater interface. Furthermore, because of topographic highs that surround the valley, the hydraulic heads are expected to be higher than in the valley sediments, inhibiting saltwater ingress. As presented in Section 3.3 in Appendix 5.6-A of the EAC Application/EIS, based on monitoring data (2010-2014), tidal elevations exceeded groundwater elevation only in rare occasions between July and September of each monitoring year. During these high tide intervals, there is an inferred landward gradient in the immediate vicinity of the shoreline; however, its duration is inherently less than the corresponding periods of southwards gradient associated with lower tidal position. Accordingly, the net groundwater flow direction during the entire monitoring period is confirmed to be southwards toward the marine foreshore. Moreover, monitoring data indicate that the saltwater wedge could be located at greater depths than approximately -30 m elevation; analytical calculations based on methodology presented in Domenico and Schwartz (1990) showed that, due to relatively high groundwater flow in the alluvial sediments, the saltwater edge could be depressed to the depth of the overburden/bedrock contact within 50 m to 150 m of the ocean shore. Based on these observations, the potential presence of a fault structure in bedrock in the vicinity of the project area is not considered to influence groundwater flow direction in the valley sediments or increase the risk of saltwater intrusion.
1470	402 - 3	Kate O'Connor	Squamish, BC	The proponent has no experience managing a marine environment for an aggregate mine and there are also no air quality monitoring stations nearby, causing further concerns for other species. This mine would cause serious environmental degradation to a sensitive area causing ripple effects to many other ecosystems. I urge you to protect this sensitive area and decline the application for industry here.	<p>A detailed assessment of potential air quality effects of the Proposed Project is presented in Volume 2, Part B – Section 5.7 of the EAC Application/EIS.</p> <p>Proposed mitigation such as enclosing material drop areas and use of mist sprays were incorporated into the air quality model develop to assess particulate matter concentrations (TSP, PM10 and PM 2.5) at the closest potential receptors sites. NO2 and SO2 predictions were also determined for sensitive receptor sites.</p> <p>Within Section 5.7.6 of the EAC Application/EIS, BURNCO has committed to developing an Air Quality and Dust Control Management Plan. This plan will include details on ambient air and meteorological monitoring such as monitoring locations, parameters to be monitoring and instruments used to monitor. In addition, establishment of an air quality and meteorological monitoring program has been identified as a specific mitigation measure within Section 5.7 of the EAC Application/EIS.</p> <p>Following the application of proposed mitigation, all potential air quality effects were determined to be negligible or not significant.</p>
1471	403 - 1	I. Sarama	Gibsons, BC	After a century of damage from the legacy of industrial abuse, Howe Sound is finally showing signs of recovery.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>

1472	403 - 2	I. Sarama	Gibsons, BC	The expansion of this type of industry will do nothing to enhance this recovery, and in fact, will cause further damage. For example, how can this project help herring and salmon stocks in the area of the MacNabb Creek estuary? It cannot, and will not, and will only cause further harm.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1473	403 - 3	I. Sarama	Gibsons, BC	Do not allow this permit!	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1474	404 - 1	Judith Holm	Squamish, BC	The project has (twice) been rejected by Fisheries & Oceans Canada because of the likely loss of salmon habitat in McNab Creek.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1475	404 - 2	Judith Holm	Squamish, BC	The strip of forest cover between the pit and the ocean is too narrow to be sustainable. Blowdown and saltwater invasion will threaten its existence.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. Maintaining a treed buffer along the foreshore (approx. 25-50 m wide adjacent to the processing area) will also limit dust and noise emissions to the marine environment. Additional screening of lan-based structures may be possible around project components not currently screened by existing vegetation. The nature and extent of vegetation screening incorporated into the site design will be described in the Vegetation Management Plan (Volume 3, Part E, Section 16 of the EAC Application/EIS).</p> <p>A detailed assessment of potential vegetation effects (including windthrow effects) of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS. The significance of windthrow effects were determined to be negligible; few new windward edges will be created. Monitoring of treeline edges will be conducted to evaluate potential windthrow effects and adaptive management will be employed, if necessary.</p>

1476	404 - 3	Judith Holm	Squamish, BC	<p>The impact of marine noise (from the conveyor belts –tugs, barge loading and water taxis) on cetaceans, herring, salmon (spawning adult and habituating juveniles) is underestimated.</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges.</p> <p>Overviews on hearing sensitivity and noise thresholds for marine fish and marine mammals are presented in Sections 5.2.5.2.3.1.3 and 5.2.5.2.4.1.2, respectively.</p> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish and marine mammals, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>
1477	404 - 4	Judith Holm	Squamish, BC	<p>Issue 1: Regional demand for additional aggregate is not demonstrated</p> <p>The Vancouver market requirement for an additional gravel /aggregate source is not supported by the proponent's documentation. A greater profit margin for the Proponent should not be grounds for destroying the estuary of McNab Creek.</p> <p>Recommendation: A supply/demand report showing strong evidence of the need for supply from this location (and the unavailability of supply from established locations), such as has been done for the Okanagan region, should be prepared before considering a permit for this project. See <a href="https://www.regionaldistrict.com/media/112368/2013_11_08_Full_Report_Aggregate_Supply_and_Demand_Update_and_Analysis.pdf">https://www.regionaldistrict.com/media/112368/2013_11_08_Full_Report_Aggregate_Supply_and_Demand_Update_and_Analysis.pdf</a></p>	<p>The purpose underlying the Proposed Project is outlined in Section 2.2 of the EAC Application/EIS. Aggregate is a non-renewable resource. Once land is developed, access to underlying aggregate is forever lost on that site. If an aggregate resources is not developed locally, aggregate materials will have to be hauled from another site - one that could be many more kilometres away and require the use of trucks. The further a community needs to travel to find sources of aggregates for all types of construction, the more expensive the aggregate becomes to local consumers.</p> <p>Gravel from the Proposed Project will be used to supply gravel to Lower Mainland located processing plants owned and operated by the proponent. These facilities are currently supplied by:</p> <ul style="list-style-type: none"> <li>- Polaris Material Corp.'s Orca Quarry at Port McNeil located on northern Vancouver Island, BC;</li> <li>- Jack Cewe Ltd.'s Treat Creek Operations located in Jervis Inlet, BC; and</li> <li>- Construction Aggregates Ltd.'s gravel mine located in Sechelt, BC.</li> </ul> <p>The development of the Project would result a reduction in barge tow distance of up to 280 km between current aggregate sources and processing facilities, thereby improving the environmental impacts.</p>

1478	404 - 5	Judith Holm	Squamish, BC	<p>Issue 2: Loss of productive salmon habitat</p> <p>The project has (twice) been rejected by Fisheries &amp; Oceans Canada because of the likely loss of salmon habitat in McNab Creek. In a year of disastrous returns to the Fraser and other runs, this proposal is ill-timed and ill-advised.</p> <p>Recommendation: The Precautionary Principle, properly applied, should see this proposal firmly rejected.</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will be mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>
1479	404 - 6	Judith Holm	Squamish, BC	<p>Issue 3: Insufficient data for at-risk species baselines.</p> <p>For several key aquatic and land-based species (such as anadromous salmon, resident cutthroat trout and Roosevelt elk), population data was collected over far too narrow a timespan to be useful for establishing accurate baselines. Without accurate baselines, quantitative monitoring of the effects of this project will not be possible.</p> <p>Recommendation: Part-year data is utterly insufficient to establishing accurate baselines. At least five years of data should be collected to afford accurate baselines usable for ongoing monitoring of effects on species populations and habitat. Local authorities (eg. SCRD) should have the power to compel a reduction, suspension or cessation of mine activities where habitat damage exceeds pre-agreed norms.</p>	<p>The Assessment Methodology for the EAC Application/EIS reflects accepted EA practice in BC and Canada. The baseline studies conducted are sufficient for the purpose of assessing potential effects of the Proposed Project on selected Valued Components. Additional years of supplemental field studies are not required or proposed for the assessment.</p> <p>Details regarding the proposed environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS. Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with EA certificate conditions and with conditions of all required permits and approvals. Effects monitoring will include periodic sampling or studies on/of groundwater, vegetation, wildlife, fish, air quality, surface water and aquatic health. The studies will be conducted with a Proposed Project study area (receiving environment) and a reference area. Monitoring plans will establish timelines and schedule for each monitoring activity (e.g., five years for post-construction monitoring). Monitoring data will be assessed against Proposed Project-specific guidelines which will be developed based on Canadian and BC guidelines and baseline benchmarks.</p>

1480	404 - 7	Judith Holm	Squamish, BC	<p>Issue 4: 21 species officially at risk from Burnco.</p> <p>Burnco's consultants documented that the gravel quarry could be home to 21 species officially at risk. This includes Roosevelt elk , re-introduced to McNab Creek in 2001 by the BC Ministry of the Environment.</p> <p>Recommendation: The Precautionary Principle, properly applied, should see this proposal firmly rejected.</p>	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>
1481	404 - 8	Judith Holm	Squamish, BC	<p>Issue 5: Will McNab Creek and the estuary become salty?</p> <p>As rock is removed from the mine, fresh water from the estuary will creep into the resultant 25m pit. This will lead to salt water seeping into the estuary, and into McNab Creek. This will kill a variety of salmon and plants.</p> <p>Recommendation: Have thorough hydrological studies done over several years. Use the precautionary principle. Local authorities (eg. SCR D) should have the power to compel a reduction, suspension or cessation of mine activities where salination exceeds preagreed norms.</p>	<p>The hydraulic conductivity of the valley sediments is much higher than hydraulic conductivity of any bedrock structures, if they exist. Therefore, the groundwater flow in the valley sediments will dominate and it will provide key control on the position of the salt water-freshwater interface. Furthermore, because of topographic highs that surround the valley, the hydraulic heads are expected to be higher than in the valley sediments, inhibiting saltwater ingress. As presented in Section 3.3 in Appendix 5.6-A of the EAC Application/EIS, based on monitoring data (2010-2014), tidal elevations exceeded groundwater elevation only in rare occasions between July and September of each monitoring year. During these high tide intervals, there is an inferred landward gradient in the immediate vicinity of the shoreline; however, its duration is inherently less than the corresponding periods of southwards gradient associated with lower tidal position. Accordingly, the net groundwater flow direction during the entire monitoring period is confirmed to be southwards toward the marine foreshore. Moreover, monitoring data indicate that the saltwater wedge could be located at greater depths than approximately -30 m elevation; analytical calculations based on methodology presented in Domenico and Schwartz (1990) showed that, due to relatively high groundwater flow in the alluvial sediments, the saltwater edge could be depressed to the depth of the overburden/bedrock contact within 50 m to 150 m of the ocean shore. Based on these observations, the potential presence of a fault structure in bedrock in the vicinity of the project area is not considered to influence groundwater flow direction in the valley sediments or increase the risk of saltwater intrusion.</p>

	Ref #	Commenter (Name)	Location		
1482	404 - 9	Judith Holm	Squamish, BC	<p>Issue 6: Unsuitable location</p> <p>This proposal would locate a noisy, dusty gravel mine and crush mill next to an existing multi-residential area. In 2009 SCRD said no to a permit for an aggregate operation at McNab Creek. There was concern re noise and dust from onsite crushing, sorting, weighing, and stockpiling, all of which Burnco plans to do. Why allow these activities now?</p> <p>Recommendation: To do so would represent atrocious planning, with little/no obvious compensating factors. It should not be permitted.</p>	<p>Accepted EA practice in BC and Canada includes the identification of mitigation measures that are technically and economically feasible (i.e., practical) means of preventing or reducing to an acceptable level any potential adverse effect of the proposed project. BCEAO (2013) considers mitigation to be any practical means or measures taken to avoid, minimize, restore on-site, compensate, or offset the potential adverse effects of a project. Compensation means measures taken to further reduce the residual effect, and may include direct physical measures (e.g., habitat enhancement, restoration or creation on, near or away from the project site), or financial mechanisms that have the outcome of reducing the residual effect (e.g., contributions to research, recovery plans, population enhancement programs for endangered species). Offset is defined in the BCMOE's Procedures for Mitigating Impacts on Environmental Values (2012) as means to counteract, or make up for, a residual impact on an environmental component.</p> <p>Potential effects on McNab Creek are being mitigated through avoidance. There are no proposed discharges to or withdrawals from McNab Creek. The pit lake is being designed such that lake elevation can be used to manage hydrostatic pressure during operations so changes to groundwater flow do not lead to a loss of flow within McNab Creek. Similarly, the size and location of the processing area was selected to avoid identified fish habitat.</p> <p>Examples of mitigation measures to reduce or minimize potential effects are:</p> <ul style="list-style-type: none"> <li>- Sediment and erosion control planning and monitoring the effectiveness of prescribed measures</li> <li>- Restricting clearing of wildlife habitat during breeding and calving periods, bird nesting periods and elk overwintering</li> <li>- Installing nest boxes for Western screech-owls in nearby forest habitat</li> <li>- Maintaining vegetation linkages and buffers to minimize habitat fragmentation and to allow escape routes for large mammals.</li> <li>- Monitoring for marine mammals during impact pile driving activities and maintaining a marine mammal safety zone based on injury noise threshold criteria.</li> </ul> <p>Examples of compensation or offset measure are:</p> <ul style="list-style-type: none"> <li>- Constructing a 790 metre extension of the lower segment of groundwater channel WC2 that will collect surface flow diverted through loss of the upper segment of WC2. This offset will increase the wetted area of the lower segment of WC2.</li> <li>- Establishing 1,250 m2 of new amphibian breeding ponds to offset the loss of existing amphibian habitat.</li> </ul>

	Ref #	Commenter (Name)	Location		
1483	404 - 10	Judith Holm	Squamish, BC	<p>Issue 7: The Fish Habitat offset plan may not work</p> <p>The Proponent has no experience operating aggregate mine in the marine environment (contrary to claims by the Project Manager, a mine near the Bow River in Calgary does not qualify as “marine”). The proposed “compensation channel” is key to attempts to mitigate the loss of fish habitat in this project. Should it fail, even partially, accountability and compensation for the loss should be automatic.</p> <p>Recommendation: Any approval of this proposal should include a contingency bond to fund maintenance of the new streamway, an overflow gate from the pit lake, and a fully-funded alternate solution should the offset plan fail. The bond should also be sufficient to cover site remediation at end-of-project.</p>	<p>The proposed Project will lead to the loss of approximately 200 m2 of spawning habitat in the upper section of WC2 however, this loss is addressed by the Fish Habitat Offset Plan (Appendix 5.1-B). The offset plan proposes to extend the length of the existing lower section of WC2 by approximately 790 m. The proposed design for the channel extension uses the existing lower channel as a template and it will meet the factors and criteria that are generally accepted for the construction of a functional groundwater-fed spawning channel. It should provide conditions similar to the existing run habitat in the lower section of WC2 that was designed as chum spawning habitat by DFO and where spawning activity was observed during the November 2016 survey.</p> <p>The creation of the pit lake is predicted to cause a doubling of groundwater influx into the lower section of WC2. The increase in ground water influx will lead to additional groundwater upwelling and the increased upwelling is expected to provide increased levels of intergravel flow that will be suitable for eggs and alevins. The average depth in the proposed offset habitat extension and the remaining section of WC2 is predicted to be above 0.3 m making it suitable for salmon spawning. As described in the Aquatic Health assessment provided in Surface Water Resources (Section 5.5.7.2), the water quality and temperature of ground and surface water entering the offset habitat and existing lower section of WC2 will be suitable for salmonids to complete all stages of their life history including spawning.</p> <p>In response to comments from the Technical Working Group, the design of the habitat offset plan was revised to allow approximately 20 m of pool habitat upstream of the culvert and approximately 20 m of gravel bed run habitat downstream of the culvert to be retained which will avoid approximately 232 m2 of habitat loss. The design of the channel extension incorporates run and pool habitat in approximately a 1 : 1 ratio, based on this design and the use of run habitat for spawning in the existing lower channel it is expected that more than 2, 000 m2 of the offset channel habitat will provide conditions suitable for salmonid spawning.</p>
1484	404 - 11	Judith Holm	Squamish, BC	<p>Issue 7: The Fish Habitat offset plan may not work</p> <p>The Proponent has no experience operating aggregate mine in the marine environment (contrary to claims by the Project Manager, a mine near the Bow River in Calgary does not qualify as “marine”). The proposed “compensation channel” is key to attempts to mitigate the loss of fish habitat in this project. Should it fail, even partially, accountability and compensation for the loss should be automatic.</p> <p>Recommendation: Any approval of this proposal should include a contingency bond to fund maintenance of the new streamway, an overflow gate from the pit lake, and a fully-funded alternate solution should the offset plan fail. The bond should also be sufficient to cover site remediation at end-of-project.</p>	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>

1485	404 - 12	Judith Holm	Squamish, BC	<p>Issue 8: Sightline, noise and dust: The proposed mine is far too close to existing residential properties.</p> <p>The McNab Creek strata title properties are well within 500' of the proposed mining operations. Because of unsightliness, the adverse effects on property values, noise and dust issues, gravel mining operations are generally not allowed within 1000' of any residential property. Other BURNCO properties have had 1,000' separation zones stipulated as conditions of their licenses to operate. Example: BURNCO property in Parkland County, Alberta. See <a href="http://www.parklandcounty.com/Assets/Governance/Subdivision+and+Development+Appeal+Board+Minutes/SDAB+Minutes+Jan+21.pdf">http://www.parklandcounty.com/Assets/Governance/Subdivision+and+Development+Appeal+Board+Minutes/SDAB+Minutes+Jan+21.pdf</a></p> <p>Recommendation: Because of the confined topography of the area, mitigation of these damaging effects is impractical. Should full compensation for loss not be acceptable to local homeowners, this mine should not be approved.</p>	The McNab Creek strata title properties are located more than 1000' from any component of the proposed Project.
1486	404 - 13	Judith Holm	Squamish, BC	<p>Issue 8: Sightline, noise and dust: The proposed mine is far too close to existing residential properties.</p> <p>The McNab Creek strata title properties are well within 500' of the proposed mining operations. Because of unsightliness, the adverse effects on property values, noise and dust issues, gravel mining operations are generally not allowed within 1000' of any residential property. Other BURNCO properties have had 1,000' separation zones stipulated as conditions of their licenses to operate. Example: BURNCO property in Parkland County, Alberta. See <a href="http://www.parklandcounty.com/Assets/Governance/Subdivision+and+Development+Appeal+Board+Minutes/SDAB+Minutes+Jan+21.pdf">http://www.parklandcounty.com/Assets/Governance/Subdivision+and+Development+Appeal+Board+Minutes/SDAB+Minutes+Jan+21.pdf</a></p> <p>Recommendation: Because of the confined topography of the area, mitigation of these damaging effects is impractical. Should full compensation for loss not be acceptable to local homeowners, this mine should not be approved.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>

1490	404 - 17	Judith Holm	Squamish, BC	<p>Issue 10: The impact of marine noise is insufficiently studied in the application</p> <p>The impact of marine noise (from the conveyor belts –tugs, barge loading and water taxis) on cetaceans, herring, salmon (spawning adult and habituating juveniles) and other at-risk species (including waterfowl) is underestimated in the “science” work done by the Proponent</p> <p>Recommendation: Marine noise transmits 5-10 times farther &amp; faster through water than through air. Marine noise should be carefully baselined and monitored in wide spatial and temporal dimensions around the site Periodic reporting of results that are auditable and accessible to the public should be part of any approval of the project. Local authorities (eg. SCRD) should have the power to compel a reduction, suspension or cessation of mine activities where marine noise exceeds pre-agreed norms.</p>	<p>The noise model developed for the prediction of noise effects for this project accounted for noise propagation over water and attenuation (or lack thereof) due to barriers and topography. The model included conservative assumptions such as modelling a downwind condition in every direction from the project.</p> <p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS, including</p> <ul style="list-style-type: none"> <li>- potential injury/mortality and behavioural disturbance of marine fish and marine mammals from underwater noise generated by impact pile driving, vessel traffic, and loading aggregate onto barges, and</li> <li>- potential behavioural disturbance in marine birds from in-air noise generated during site clearing, construction, and operations.</li> </ul> <p>After mitigation, the significance of potential injury/mortality effects of underwater noise on marine fish and marine mammals was determined to be negligible. The significance of potential for behaviour disturbance of marine fish and marine birds was negligible. The significance of potential for behavioural disturbance of marine mammals was not significant; any potential behavioral disturbance of marine mammals as a result of Proposed Project vessel noise is predicted to be localized, temporary, and reversible, with marine mammals either habituating to noise and remaining in the area, or leaving temporarily and returning once the noise has subsided. Given that no hearing impairment effects are likely and that no critical or sensitive marine mammal habitats occur within the RSA, no effects at the population level are anticipated for any marine mammal species known to frequent the RSA. Potential behavioral disturbance due to cumulative vessel noise effects is not predicted to result in a substantial change to the viability of marine mammal health in the RSA (i.e., the ability of the population to function over time within the defined spatial and temporal boundary).</p> <p>Measures for mitigating potential effects on Marine Resources, including noise effects on marine fish, mammals and birds, are detailed in Volume 2, Part B - Section 5.2.5.3 of the EAC Application/EIS.</p>

1493	404 - 20	Judith Holm	Squamish, BC	<p>Issue 12: Water Quality is insufficiently characterized in the application</p> <p>Removing sediment in the water discharged into the ocean is critical to habitat protection, not least for the nearby eel grass beds and glass sponge reefs.</p> <p>Recommendation: Siltation monitoring (both in the original and compensation channels and in the nearby ocean), with periodic reporting of results that are auditable and accessible to the public, should be part of any approval of the project. Local authorities (eg. SCRD) should have the power to compel a reduction, suspension or cessation of mine activities where sediment/siltation exceeds pre-agreed norms.</p>	<p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS.</p> <p>Positive effects on the flows in McNab Creek are predicted to result from reducing the rate of flow loss to the groundwater system. Increased baseflows are also predicted in the foreshore minor streams. Water quality predictions are below applicable Water Quality Guidelines.</p> <p>Groundwater flow is predicted to be less than the baseline during the first 15 years of operation. This loss represents a gain in flow in McNab Creek. Groundwater flow at closure will be controlled through adaptive management of the overflow structure. No water quality parameters are predicted to exceed BCWQG or CCME Guidelines.</p>
1494	404 - 21	Judith Holm	Squamish, BC	<p>Issue 12: Water Quality is insufficiently characterized in the application</p> <p>Removing sediment in the water discharged into the ocean is critical to habitat protection, not least for the nearby eel grass beds and glass sponge reefs.</p> <p>Recommendation: Siltation monitoring (both in the original and compensation channels and in the nearby ocean), with periodic reporting of results that are auditable and accessible to the public, should be part of any approval of the project. Local authorities (eg. SCRD) should have the power to compel a reduction, suspension or cessation of mine activities where sediment/siltation exceeds pre-agreed norms.</p>	<p>A Water Management Plan, currently being prepared for inclusion in the Mines Act and Water Sustainability Act Permit applications, will provide a long-term water management strategy that includes the management of water resources, a mitigation plan to reduce potential effects to water resources and an effects monitoring plan to monitor water resources in the receiving environment. The plan is designed to meeting the preliminary mitigation measures and commitments and assurances outlined in the EAC Application/EIS and those required by the Water Sustainability Act. Based on the water quantity and water quality monitoring programs (hydraulic heads and quality), if observed water levels and water quality start to show a trend towards potential negative effects to the receiving environment, then adaptive management will be undertaken. Adaptive management techniques to be implemented as required include:</p> <ul style="list-style-type: none"> <li>- Continue to evaluate the extent of the pit during operations.</li> <li>- During the wet season, if water levels in the pit lake become higher than has been designed for the Pit Lake Containment Berm then the valves in the culverts will be closed to reduce the amount of water reporting to the pit from the surface water on the western slope.</li> <li>- The height of the pit lake at the outlet structure can be adjusted to increase or decrease the level of the pit lake (e.g., adding or lowering stop logs) at closure to maintain the hydraulic gradient between McNab Creek and the Project Area following closure.</li> </ul>
1495	404 - 22	Judith Holm	Squamish, BC	<p>Issue 13: "Daytime Hours" definition</p> <p>The Proponent advertises that the plant will operate only on weekdays and during "daytime hours". Daylight hours vary seasonally, but the definition of "daytime hours" is unclear.</p> <p>Recommendation: Clearly define "daytime hours" in the proposal.</p>	<p>The Proposed Project will be in operations 8 to 10 hrs/day, 260 days/year (i.e., 5 days/week). The frequency of barge loading will be one every other day and it will take approximately 2 to 3 hrs to load each barge. All operational work will occur during seasonal daylight hours; the duration of work hours will vary depending on the time of year. As per the SCRD noise bylaw, operations will be limited to 7 AM to 9 PM, with the exception of holidays.</p> <p>Additional details regarding Proposed Project operations are provided in Volume 1, Part A – Section 2 of the EAC Application/EIS.</p>

Issue No.	Source			Public Comment/Issue	Proponent Response
	Ref #	Commenter (Name)	Location		
1496	404 - 23	Judith Holm	Squamish, BC	<p>Issue 14: The nearshore strip of forest cover is too narrow</p> <p>The strip of forest cover between the pit and the ocean is too narrow to be sustainable. Blowdown and saltwater invasion will threaten its existence</p> <p>Recommendation: For reasons of sustainability and visual camouflage, increase the width of the ocean-pit separation strip, and lessen the size of the proposed pit and crushing area.</p>	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. Maintaining a treed buffer along the foreshore (approx. 25-50 m wide adjacent to the processing area) will also limit dust and noise emissions to the marine environment. Additional screening of lan-based structures may be possible around project components not currently screened by existing vegetation. The nature and extent of vegetation screening incorporated into the site design will be described in the Vegetation Management Plan (Volume 3, Part E, Section 16 of the EAC Application/EIS).</p> <p>A detailed assessment of potential vegetation effects (including windthrow effects) of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS. The significance of windthrow effects were determined to be negligible; few new windward edges will be created. Monitoring of treeline edges will be conducted to evaluate potential windthrow effects and adaptive management will be employed, if necessary.</p>
1497	404 - 24	Judith Holm	Squamish, BC	<p>Issue 15: Loss of property values in the nearby strata units</p> <p>The proponent claims little or no loss of value for nearby properties. This assertion is contradicted by many studies that have highlighted the loss of value (including the value associated with quiet enjoyment) at or near industrial sites adjacent to established residential areas. Recent jurisprudence in BC has borne out the right of homeowners to receive compensation for that loss. See <a href="http://www.cbc.ca/news/canada/british-columbia/grace-isletcontroversy-ends-as-b-c-steps-in-to-buy-land-1.2906882">http://www.cbc.ca/news/canada/british-columbia/grace-isletcontroversy-ends-as-b-c-steps-in-to-buy-land-1.2906882</a></p> <p>Recommendation: Fair market value compensation for loss of property value must form part of the economic analysis of any approval for this mine.</p>	<p>Potential effects on real estate values are presented in Section 6.1 of the EAC Application/EIS.</p> <p>The closest property owners to the Proposed Project is the McNab Creek Strata located east of McNab Creek, approximately 500 metres from the northern boundary of the BURNCO property. Mitigation is proposed to address potential nuisance effects such as changes in air quality, visual quality and noise levels; all related potential effects were determined to be negligible or not significant.</p> <p>Additional mitigation is proposed that is designed to offset potential changes in real estate values of these properties that will likely enhance their marketplace value (e.g., access arrangements and potential interconnection to BC Hydro electricity service to enable the elimination of fossil fuel fired generator use).</p> <p>BURNCO is committed to being a good neighbour and has initiated discussions with the McNab Creek Strata owners regarding issues of mutual benefit and concern. BURNCO is consulting with the community on a Community Enhancement Fund that would be allocated to the surrounding community. These discussion are ongoing.</p>
1498	404 - 25	Judith Holm	Squamish, BC	<p>Issue 16: First Nation consultation – Sechelt FN was omitted this time</p> <p>Squamish and Tseil-Waututh First Nations have been consulted re Burnco, but not the Sechelt FN. The Sechelt First Nations weren't consulted about the gravel quarry at McNab Creek in 2009 either. McNab Creek is in Sechelt traditional territory.</p> <p>Recommendation: Respect/consult with Sechelt First Nations re Burnco.</p>	<p>First Nation consultation requirements are delegated to Proponents by the Crown. For the Proposed Project, only Squamish Nation and the Tseil-Waututh Nation were identified as potentially affected first Nations by the BCEAO. The CEA Agency identified additional Aboriginal Group, however, the Sechelt First Nation was not among these, presumably because of the proximity of the proposed Project to their Traditional Territory.</p>

1499	404 - 26	Judith Holm	Squamish, BC	<p>Issue 17: Advisory Committee of voluntary citizens</p> <p>In 2009 when a gravel quarry at McNab Creek was turned down by SCRD, one requirement was an Advisory Committee of volunteer citizens to provide ongoing input with the goal of community acceptance of the project.</p> <p>Recommendation: Require the formation of an Advisory Committee of volunteer citizens.</p>	<p>BURNCO will establish a Community Advisory Group (CAG) to provide a forum for interested stakeholders to review, discuss and make recommendations. CAG terms of reference and meeting minutes will be made available online.</p>
1500	404 - 27	Judith Holm	Squamish, BC	<p>Issue 18: The job benefits were analyzed on the basis of too narrow an RAA.</p> <p>BURNCO currently sources its aggregate from Jervis Inlet, Port McNeil and Coquitlam. To gauge the benefits to the BC economy, the net job creation figures (i.e. McNab's 12 jobs less the job losses at the above aggregate sources) as a consequence of allowing the McNab Creek operation must be considered.</p> <p>Recommendation: If there is little or no net job gain to BC as a result of this proposal, it should be firmly rejected. Jobs in areas like Port McNeil are much harder to come by than in the Lower Mainland/ Howe Sound.</p>	<p>The local spatial study area for the operations phase labour market effects (including employment) of the Proposed project was described in the Application Information Requirements/EIS Guidelines, which was approved by the BCEAO and the CEA Agency on December 16, 2014 after review by the Technical Working Group established to guide this assessment. This local spatial study area is Sunshine Coast Regional District.</p> <p>The current and future demand for aggregates in BC's Lower Mainland and in major cities along the US west coast from various buyers for construction projects is robust. As a result of this demand, aggregate supply sources on and near the BC coast are expected to continue to experience strong buyer interest over the long term for their products.</p>

1501	404 - 28	Judith Holm	Squamish, BC	<p>Issue 19: Barge traffic will diminish Howe Sound's recreational and tourism potential and add to the cumulative traffic hazard in Howe Sound</p> <p>Shipping 1-4 million tonnes of aggregate annually from this location will make for 2-6 tug/barge movements daily through Southern Howe Sound,. Routes would cross very busy sailing and small-boat recreational areas, the Howe Sound Marine Trail and ferry routes, the path of LNG tankers exiting from the Woodfibre LNG plant and freighters from Squamish Terminals. This exponentially increases the risk of collisions and loss of life in a narrow waterway and diminishes the amenity and tourism use of the Sound. The cumulative effects and worst-case hazard analysis of this project have been underestimated by the Proponent.</p> <p>Recommendation: A cumulative impact assessment, including loss of amenity and tourism value of the Sound, should be completed prior to deciding on this application. So too should a study of the increased hazards associated with increasing the large-vessel traffic in Howe Sound. Improvements to vessel tracking, buoys and channel markers in the area will be necessary.</p>	<p>Section 7.2 of the EAC Application/EIS presents a marine transportation assessment, including potential wake effects from the Proposed Project-related vessel traffic on shoreline infrastructure, and potential interference with navigation use and navigability due to Proposed Project-related infrastructure and vessel traffic.</p> <p>There is no potential interaction between potential wake effects and shoreline infrastructure, therefore the nature of this interaction was determined to be negligible. The potential effects of the Proposed Project on navigation use and navigability associated with Project-related infrastructure was determined to be negligible following the implementation of proposed mitigation.</p> <p>Potential effects of the Proposed Project on navigation use and navigability due to Project associated vessel traffic during construction and operations was determined to be not significant as the frequency of small vessels changing direction and speed to move out of the paths of larger vessels is expected to increase only slightly.</p> <p>Proposed Project-related barging may interact with Woodfibre LNG carriers along a small section of the Project's barging route. However, potential interactions between vessels would occur infrequently and potential cumulative residual effects are expected to be not significant following implementation of mitigation measures which include marine transportation management planning involving Canada Coast Guard, Pacific Pilotage Authority, the selected tug operator, BURNCO and other key maritime stakeholders – including Woodfibre LNG – to identify mutually agreeable operating practices.</p>
1502	404 - 29	Judith Holm	Squamish, BC	<p>Issue 20: The job benefits analysis used the questionable input-output econometric model.</p> <p>BURNCO has used input-output econometric analysis to predict the job creation benefits accruing to the project For resource projects, this is a highly questionable analysis technique. The Australian Institute has written a convincing argument highlighting the inadequacies of input-output analysis. See <a href="http://www.tai.org.au/sites/default/files/TB%2012%20The%20use%20and%20abuse%20of%20economic%20modelling%20in%20Australia_4.pdf">http://www.tai.org.au/sites/default/files/TB%2012%20The%20use%20and%20abuse%20of%20economic%20modelling%20in%20Australia_4.pdf</a> (Input-output was used by the BC Government in arriving at its inflated job estimates for BC's LNG industry.)</p> <p>Recommendation: Red-do the employment estimates and repost/ allow additional time for public scrutiny and comments</p>	<p>The environmental assessment of the Proposed Project used an input-output (I-O) impact modelling methodology to estimate the Project's potential effect on employment (as well as other economic parameters). The B.C. Input-Output Model (BCIOM) was used. The BCIOM is maintained by BC Stats, which is the central statistics agency of the B.C. government. The BCIOM is a version of Statistics Canada's Inter-Provincial Input-Output Model (IPIOM) which BC Stats calibrated for undertaking economic analyses of B.C.-based projects. The BCIOM is a robust, calibrated, third party provided input-output model, and has been previously accepted for use by by the BCEAO and the CEA Agency to assist with estimating the economic impact of proposed projects.</p>

1503	404 - 30	Judith Holm	Squamish, BC	<p>Issue 21: There was an inconsistency between the job creation figures shown in 2 different slides in the Open Houses</p> <p>One showed about 300 person-years of employment (over 25years). The other (derived from input-output analysis) showed person-year employment benefits several times that amount.</p> <p>Recommendation: This misleading discrepancy should be resolved by further analysis, and that section of the application re-submitted, with additional time allowed for public scrutiny and comment</p>	<p>The estimated number of jobs created by the proposed Project during construction and operations phases are presented in Section 2.5.4 of the EAC Application/EIS.</p> <p>Employment numbers were presented on three Open House display panels, as follows:</p> <ul style="list-style-type: none"> <li>- Project Specifications: 80 person years during construction and 360 person years during operations (direct, indirect and induced);</li> <li>- Project Benefits: 12 full-time jobs at the site (i.e. direct only);</li> <li>- Sustainable Economy: 119 jobs during construction and 99 jobs during operations (direct, indirect and induced); 33 long-term jobs during operations are expected to be filled by Sunshine Coast residents.</li> </ul>
1504	404 - 31	Judith Holm	Squamish, BC	<p>Issue 22: Preservation of marine tourism, hiking access to the vicinity of McNab</p> <p>Moorages, anchorages, swimming facilities and back-country access have long been part of the McNab Creek area's attractions for Howe Sound visitors and local boating clubs</p> <p>Recommendation: The application fails to properly address how these local amenities will be protected. Neither does it propose how loss of these amenities will be compensated for. The Management Plan should address this issue.</p>	<p>Harvesting fish and wildlife' and 'Outdoor recreation and tourism' are valued components in the environmental assessment of the Proposed Project (see Table 7.3-1). No displacement effects on recreational hunting or other recreational activities is anticipated due to the Proposed Project because the primary access to the local study area is through the Proposed Property, and public access and use of the Proposed Property has never been permitted. During the construction and operation phases, recreationists and tourists would continue to have access to the foreshore area below the high water mark and to the anchorage area in the vicinity of where McNab Creek enters Howe Sound.</p> <p>Proposed Project construction and operations would prevent marine-based recreational and tourism activities occurring around the Project jetty. As the jetty is located within an existing log boom tenure and recreational and tourism activities are concentrated on the eastern side of the local study area (where McNab Creek enters Howe Sound), this effect is considered to be negligible.</p> <p>Displacement on the water would occur on an intermittent basis as a result of Proposed Project-related vessel traffic, which would require smaller vessels to alter direction and/or speed when navigating at the same time as water taxis or barges (Volume 2, Part B - Section 7.2). These navigational challenges are present in the LSA due to forestry activity, and are subject to the Collision Regulations of the Canada Shipping Act. Any resulting effects on recreational boating recreational activities due to potential interactions of recreational vessels and equipment and Project-associated vessels are not detectable or not measureable, so potential effects of the Proposed Project on water-based recreation and tourism access matters in the construction and operation phases are determined to be negligible.</p> <p>As part of the Marine Transport Management Plan outlined in Marine Transport (Volume 2, Part B - Section 7.2), BURNCO would also develop and implement strategies, best management practices and guidelines to avoid and minimise Proposed Project - related disruption of marine-based recreational activities during construction and operations. As part of the development of this plan, BURNCO would consult with key marine user groups (e.g., McNab Strata, yacht clubs, camps, and kayaking operators) to discuss strategies (including but not limited to routing options) to manage the interaction of Proposed Project vessel traffic with recreational and tourism areas during the high season months.</p>

1505	404 - 32	Judith Holm	Squamish, BC	<p>Issue 23: End-of-project remediation</p> <p>The compensation channel is an artificial structure which will likely not survive long after project's end.</p> <p>Recommendation: Restoring the natural streamway should be a firm end-state requirement.</p>	<p>A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit.</p> <p>Progressive and ongoing reclamation activities will occur throughout all phases of mine development. The Proposed Project will use progressive reclamation of the site that includes ongoing reclamation activities taking place alongside active extraction and pit area around the proposed operations area. Site planning will include landscaping, further design and development of the existing berm along the north edge logging road of the pit area, along with the creation of southern pit containment berm, surface water features, fisheries habitats and vegetation throughout the site consistent with the operational extraction schedule. Ongoing monitoring will be conducted for relevant noise and dust, water quality parameters, and fish, vegetation and wildlife resources. Details regarding the monitoring program (in addition to the reclamation monitoring suggested in the plan) is provided in Volume 3, Part E – Section 17.0 of the EAC Application/EIS.</p>
1506	405 - 1	Personal Information Withheld	Bowen Island, BC	<p>I am a resident of Bowen Island and a long time recreational user of Howe Sound. I am unequivocally opposed to the Burnco project. Whether considered from an economic, ecological for social perspective, the project does not merit approval. When all of these considerations are taken into account, The case for refusal is overwhelming.</p>	<p>Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.</p>
1507	405 - 2	Personal Information Withheld	Bowen Island, BC	<p>Economic –while the project undoubtedly would provide economic benefits, they are outweighed by the economic benefits tourism and recreation would provide. The alternative uses are not compatible. Further, the economic benefit of a gravel mine can be achieved elsewhere in the province, which is not the case for tourism and recreation, the economic values of which are dependent on proximity to Metro Vancouver.</p>	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
1508	405 - 3	Personal Information Withheld	Bowen Island, BC	<p>Ecological – Mcnab Creek is one of the last estuaries in Howe Sound that has not been intensively developed. The estuary has significant fisheries values, which will be completely destroyed if the project proceeds, and which cannot be replaced. From an ecological perspective the project has no benefit whatsoever. This alone should lead to rejection.</p>	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.</p>

1509	405 - 4	Personal Information Withheld	Bowen Island, BC	Social –public opinion is overwhelming that the Howe Sound environment should be treasured and protected. Regard should be had to this public opinion. A large scale industrial development in Howe Sound will diminish the recreational opportunities for the many thousands who know use the sound and the many more thousands who will seek recreational opportunities near to Metro Vancouver in future. The proximity of an environmentally healthy and aesthetically attractive Howe Sound to Metro Vancouver is vital to the quality of life enjoyed by residents today and the millions who will be here in future. The project does not merit approval.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
1510	406 - 1	Personal Information Withheld	Brackendale, BC	Please DON'T allow this project to proceed. The environmental damage will far outweigh public benefit.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1511	407 - 1	Robert Turner	Bowen Island, BC	Comments to Environmental Assessment Office regarding Burnco Aggregate Project McNab Creek, Howe Sound, BC Submitted October 2, 2016  Dr. Robert Turner, 710 Minnows Lane, Bowen Island, BC V0N1G2 Personal background BSc Geological Engineering, Queens University; MSc, PhD Geology, Stanford University Research scientist, Geological Survey of Canada, Vancouver 1989-2014 Resident, Bowen Island, 1989 - present Mayor, Bowen Island, 2005-2011 Lead organizer, 1991 Howe Sound Environmental Science Workshop and co-editor of conference proceedings (Levings et al, 1991).	No specific response to this item is required in relation to the EAC Application/EIS which is the focus of the public comment period. It will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1512	407 - 2	Robert Turner	Bowen Island, BC	<p>Estuaries are ecological jewels. The entire Howe Sound inlet has very limited wild and functional estuary. McNab Creek is the second largest estuary in Howe Sound. Why would you mine it?</p> <p>McNab Creek is the second largest estuary in Howe Sound. Estuaries form a tiny portion of Howe Sound's total shoreline but are its richest shoreline habitats in terms so biodiversity and biological productivity. Estuaries are ecological jewels in the broader context of Howe Sound's ecological function and deserve our highest protection.</p> <p>Question 1.1: Where else in BC has an estuary been mined for gravel? If there is/has been such a mine, what environmental mitigation strategies where employed. Was remediation successful? If not, why would the Burnco application be allowed to set a precedent for such an ecologically damaging activity?</p>	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B –Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1513	407 - 3	Robert Turner	Bowen Island, BC	<p>Burnco proposal largely blocks the animal corridor between upper McNab valley and shoreline, functionally disconnecting estuary from uplands.</p> <p>The proposal intends to fill three quarters of the lower one kilometer of the McNab Creek valley with a 24/7 industrial operation that will alienate that area from wildlife, and spread industrial noise throughout the lower valley for at least the project lifetime. It is inconceivable that this industrial noise and land alienation will not greatly limit the function of the lower valley as habitat and greatly disconnect migration of mammals such as elk, black bear, wolves, and grizzly bear between upper valley and the shore. Local observations show the estuary is heavily used by elk and black bear, and occasionally by grizzly bear and wolves. I have visited McNab Creek many times and have seen the tracks.</p> <p>Question 2.1: How will the project proposal offset the project impacts on elk, bear and wolf migration along the valley floor from upper valley to estuary?</p>	<p>A detailed assessment of potential wildlife and vegetation effects of the Proposed Project is presented in Volume 2, Part B – Section 5.3 of the EAC Application/EIS.</p> <p>Potential effects were assessed for the following selected valued components:</p> <ul style="list-style-type: none"> <li>- Amphibian species at risk</li> <li>- Western screech owl, Common nighthawk, Northern goshawk Band-tailed pigeon and Marbled murrelet;</li> <li>- Roosevelt elk and grizzly bear;</li> <li>- Environmentally sensitive ecosystems;</li> <li>- Ecosystems at risk; and</li> <li>- Plant species a risk.</li> </ul> <p>Following the application of proposed mitigation (e.g., design features and operational requirements, environmental management planning, habitat enhancement, progressive reclamation, etc.), potential residual effects were determined to be negligible or not significant.</p> <p>Cumulative effects on grizzly bear were determined to be significant however the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

	Ref #	Commenter (Name)	Location		
1514	407 - 4	Robert Turner	Bowen Island, BC	<p>Question 2.2: Given ongoing forestry operations in McNab Creek valley, and extensive past cutting of valley floor forests, and recent construction of the Box Canyon power project, how does the additional impact of the Burnco proposal relate to the cumulative impacts of other past and ongoing industry in the valley?</p> <p>Question 2.3: What cumulative effects assessment has been made of ecosystem health of the McNab Creek valley?</p>	<p>Potential cumulative effects of the Proposed Project and other certain and reasonably foreseeable projects and activities have been assessed for all non-negligible residual effects (i.e., for all potential effects of the Proposed Project determined to be significant or not significant following the application of proposed mitigation) in accordance with an assessment methodology that reflects accepted EA practice in BC and Canada. The significance of potential cumulative residual effects was characterized for the following:</p> <ul style="list-style-type: none"> <li>- Marine mammals – behavioural disturbance</li> <li>- Amphibian species at risk – barriers to movement, change in mortality, habitat loss</li> <li>- Roosevelt elk – barriers to movement, change in mortality, habitat loss</li> <li>- Grizzly bear – change in mortality, habitat loss</li> <li>- Environmentally sensitive ecosystems – loss of extent</li> <li>- Ecosystems at risk – loss of extent</li> <li>- Air quality indicators – increase in PM2.5 (24 hr, annual), PM10 (24 hr), TSP (24 hr, annual)</li> <li>- Real estate – change in real estate value</li> <li>- Marine navigation – interference with navigation use and navigability due to Project-related vessel traffic</li> <li>- Harvesting fish and wildlife – change in environmental setting</li> <li>- Recreation and tourism – change in environmental setting</li> <li>- Visual quality – change in visual quality</li> <li>- Heritage resources – changes to heritage resource integrity, context and accessibility</li> <li>- People – Human health (air quality and particulate matter).</li> </ul> <p>All potential cumulative residual effects were determined to be negligible or not significant except net effects to grizzly bear; cumulative residual effects to the threatened Squamish-Lillooet Grizzly Bear Population Unit were determined to be significant due in large part to vehicle collisions that might result from the development of new logging roads. Grizzly bear have not been observed within the Proposed Project area and the Proposed Project is not predicted to contribute to the potential mortality of the species.</p>

Issue No.	Source			Public Comment/Issue	Proponent Response
	Ref #	Commenter (Name)	Location		
1515	407 - 5	Robert Turner	Bowen Island, BC	<p>The project will permanently isolate McNab Creek from migration across the majority of its natural floodplain.</p> <p>The natural habit of the river is to wander back and forth across its natural floodplain and estuary. Berms surrounding the proposed pit will permanently restrict McNab Creek to the eastern margin of the estuary. The berms will isolate the Creek from three quarters of its natural fan delta, removing the Creek's ability to directly replenish sediment to the western part of the estuary and create diverse habitats. Given ongoing sea level rise, forecast to be at least 1 m rise by 2100, this lack of direct sedimentation to the western estuary will increase the risk of shoreline erosion, wet meadow and tidal flat erosion, and shoreline retreat, with consequent valuable habitat loss throughout this area.</p> <p>Question 3.1: What mitigation is proposed to offset the loss of natural river-mouth migration, and the loss of sediment deposition and natural aggradation across the western side of the estuary?</p>	<p>An assessment of avulsion risk on McNab Creek indicated that, on short time scales (decadal) the risk of lateral channel migration of McNab Creek into the area of the proposed project is considered to be Low. Appropriate engineering of the flood control dyke can reduce the risk to Very Low. Long term maintenance will be required to sustain the Very Low risk level.</p> <p>The proposed Project will lead to the loss of approximately 200 m2 of spawning habitat in the upper section of WC2 however, this loss is addressed by the Fish Habitat Offset Plan (Appendix 5.1-B). The offset plan proposes to extend the length of the existing lower section of WC2 by approximately 790 m. No other fisheries-related offset is proposed.</p>
1516	407 - 6	Robert Turner	Bowen Island, BC	<p>Why permit a "wet" gravel mine?</p> <p>Almost all of BC's gravel resources are located on forested hillsides. These "dry" aggregate resources are abundant in the south coast region, sufficient for decades of development needs. Dry deposits typically do not occupy vital ecological landscapes given that forested slopes are extensive (and therefore not unique) throughout the region. Burnco on the other hand is applying to mine a "wet" gravel resource that occupies a critical high ecological value estuary. This makes no sense to my geological experience. It is well understood that the mining industry doesn't get to choose where a resource is. Sometimes the resource is in the wrong place to mine. McNab Creek estuary is just such a location.</p> <p>Question 4.1: Why should a gravel mine be permitted in an ecologically sensitive area, when there are extensive undeveloped gravel resources in much less sensitive areas?</p>	<p>Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.</p>

	Ref #	Commenter (Name)	Location		
1517	407 - 7	Robert Turner	Bowen Island, BC	<p>Inappropriate location for a Processing/Stockpiles Area</p> <p>At McNab, a forest 30-300m wide of second growth sitka spruce-hemlock forest 80-250 years old fringes the entire estuary shoreline. This mature forest is an essential element of the estuary, forming a natural transition between upland and wet meadow-tidal flats of the intertidal estuary. The entire one kilometer of estuary shoreline with fringing forest, intertidal marsh and mud-sand-cobble tidal flats intact at McNab Creek. This coastal strip is the most valuable and sensitive part of the estuary.</p> <p>The Processing/Stockpiles Area is proposed within the fringing forest of this coastal strip. This will require clearing of a large tract of mature second growth 80-250 year old hemlock-sitka spruce forest. This forest zone is 150-200m wide at the Processing/Stockpiles Area site and all but a sliver-thin buffer will be lost.</p> <p>Question 5.1: Why is the processing facility not located inland, north of the power line, and well back from the most ecologically sensitive area of the estuary?</p>	<p>The Proposed Project was thoughtfully designed to be environmentally responsible, sensitive to the environment of the proposed site while making use of existing conditions. Since the initial design, the project has changed considerably. Revisions and refinements have been made in response to our Project Team's feedback and to comments and concerns raised by regulatory agencies, Aboriginal Groups and the public.</p> <p>A few examples of project considerations, and subsequent changes and components designed to address feedback received to date include:</p> <ul style="list-style-type: none"> <li>- Using existing BC Hydro lines to electrically powered equipment to extract, process and load the aggregate resource to limit exhaust emissions from the burning of fossil fuels;</li> <li>- Revised the size and location of the processing area to avoid identified fish habitat and to mitigate potential noise effects.</li> <li>- Revised stockpile location and design to limit potential operational noise effects.</li> <li>- Refined berm design and location to limit potential noise and air quality effects.</li> <li>- Maintained tree buffer on foreshore to limit noise effects, dust emissions, and visual effects.</li> </ul> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>

1518	407 - 8	Robert Turner	Bowen Island, BC	<p>Inadequate proposed reclamation plan due to incorrect downgrade of forest capability from Class 1 forest to Class 3 forest</p> <p>The following is based on 4.0 Reclamation and Effective Closure Plan Document, Golder Associates. Forest capability mapping done prior to logging and published in 1984 (Serryk and Perry 1984) rated the project area forests as a Class 1 forest. The proponents argue that, because it is “disturbed”, the area should be downgraded to a Class 3 forest area, and that required reclamation only need to compensate to a Class 3 forest level (page 6). But the proponents provide no evidence of disturbance beyond previous logging.</p> <p>Question 6.1: Why would a provincial government “forest capability” map that was based on observation of the existing forest type (Serryk and Perry 1984) not be the accurate assessment of what the forest capable of growing in the project area? Why would logging of the forest change the capability of the site to grow a forest?</p>	<p>A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit.</p> <p>Progressive and ongoing reclamation activities will occur throughout all phases of mine development. The Proposed Project will use progressive reclamation of the site that includes ongoing reclamation activities taking place alongside active extraction and pit area around the proposed operations area. Site planning will include landscaping, further design and development of the existing berm along the north edge logging road of the pit area, along with the creation of southern pit containment berm, surface water features, fisheries habitats and vegetation throughout the site consistent with the operational extraction schedule. Ongoing monitoring will be conducted for relevant noise and dust, water quality parameters, and fish, vegetation and wildlife resources. Details regarding the monitoring program (in addition to the reclamation monitoring suggested in the plan) is provided in Volume 3, Part E – Section 17.0 of the EAC Application/EIS.</p>
1519	407 - 9	Robert Turner	Bowen Island, BC	<p>Proponent soil assessment is inadequate.</p> <p>No soils mapping was conducted by the proponent. Rather a series of soil pits were used to test the soils and interpolate soil characteristics between pits (Figure 3). The pit locations are not on any type of grid, or guided by existing soil mapping, and so the location of the test pits appears arbitrary, and provides no confidence that the soil pits are representative of the soils in the project area.</p> <p>Further, the proponent excludes examination and discussion of the soils in the Processing/Stockpiles Area. The Golder report states on page 6 “The Proposed Project Area consists of unvegetated or sparsely vegetated areas; small pockets of shrub dominated, sapling forest, and young forest structural stages. Mature forest is located to the north and east, outside of the Proposed Project Area.”</p> <p>Question 7.1: Why is there no mention of the mature forest areas that will be cleared for the Processing/Stockpiles Area at the shoreface?</p>	<p>We recognize that soils mapping was conducted at a reconnaissance level and based on existing geotechnical borehole and test pit data and existing publically available soils maps. We believe that this information was sufficient for EAC Application/EIS that required LSA soils mapping at a 1:5000-scale.</p> <p>Subsequent soil surveys including additional soil plot locations in the Processing Area, plus select soil sample collection and analytical testing for soil quality will be completed prior to surface preparation. This information combined with the preliminary EAC Application/EIS soils mapping and geotechnical subsurface data will be used to prepare updated soil maps and soil salvage and reclamation plans as required for the BURNCO Mines Act Permit Application (MAPA).</p> <p>Mature forest areas that will be cleared are noted in Volume 2, Section 5.3 of the EAC Application/EIS: The Proposed Project will remove approximately 3.3% (4 ha) of mature coniferous forest for the marine conveyor belt system in the LSA.</p>

1520	407 - 10	Robert Turner	Bowen Island, BC	<p>Curiously, no soil pits were dug in the proposed Processing/Stockpiles Area area where a mature Class 1 forest currently stands.</p> <p>Question 7.2: Why did the proponent not sample any of the soils in the Processing/Stockpiles Area?</p>	<p>No soil pits were dug in the noted areas. Soil sampling and analytical testing for soil quality and reclamation is required to satisfy the Mines Act Permit Application (MAPA). As approved by the Ministry of Energy and Mines (MEM), a detailed soil sampling program will be provided in the Reclamation and Closure Plan of the BURNCO MAPA. Proposed soil surveys and select sampling will be completed in the Processing Area and mature forest areas prior to construction activities.</p>
1521	407 - 11	Robert Turner	Bowen Island, BC	<p>The proponents arguments that given that the land has been logged, therefore its "forest capability" has been reduced from a Class 1 to a Class 3 forest appears to lack basis. The proponents soil pit study does not provide evidence that the sites chosen for sampling are indeed representative of the project area. Confidence in this study is further eroded by the lack of soil sampling of the proposed Processing/Stockpiles Area, a standing Class 1 forest. All this leads to a larger question.</p> <p>Question 7.3: Why is the reclamation plan not based on reestablishing a Class 1 forest after closure?</p>	<p>A Reclamation and Effective Closure Plan is provided in Volume 4, Part G – Section 22.0: Appendix 4 of the EAC Application/EIS. The plan describes the proposed measures and commitments to manage, maintain and monitor water management structures, remove surface facilities, and reclaim areas and develop a functional ecosystem in the freshwater pit.</p> <p>Progressive and ongoing reclamation activities will occur throughout all phases of mine development. The Proposed Project will use progressive reclamation of the site that includes ongoing reclamation activities taking place alongside active extraction and pit area around the proposed operations area. Site planning will include landscaping, further design and development of the existing berm along the north edge logging road of the pit area, along with the creation of southern pit containment berm, surface water features, fisheries habitats and vegetation throughout the site consistent with the operational extraction schedule. Ongoing monitoring will be conducted for relevant noise and dust, water quality parameters, and fish, vegetation and wildlife resources. Details regarding the monitoring program (in addition to the reclamation monitoring suggested in the plan) is provided in Volume 3, Part E – Section 17.0 of the EAC Application/EIS.</p>
1522	407 - 12	Robert Turner	Bowen Island, BC	<p>Environmental bonding</p> <p>Given the high ecological values of McNab Creek estuary, and the large impacts this proposal will impose on the estuary, and the critical role that estuaries play in Howe Sound, this proposal also poses serious risks to the larger ecosystem health of Howe Sound. Should a mine go ahead, it is critical that environmental reclamation and monitoring of reclamation works be successful to the highest standards. To ensure reclamation compliance, and public confidence that this will indeed be achieved, significant environmental bonds need to be in place.</p> <p>Question 8.1: What criteria are being used to evaluate the necessary level of environmental bonding for reclamation?</p> <p>Question 8.2: What amount of reclamation bonding is required of the proponent before start of works?</p>	<p>Mines Act permitting is required which includes provisions for a performance and reclamation bond. In addition, a letter of credit is typically required as part of the Fisheries Act authorization until the works are determined to be functioning as intended.</p> <p>Details regarding the proposed Environmental management and monitoring programs for the Proposed Project are provided in Volume 3, Part E – Section 16 and 17 of the EAC Application/EIS.</p> <p>Environment monitoring plans will be developed by qualified environmental professionals and implemented to achieve compliance with Certificate conditions and with terms and conditions of regulatory permits and approvals. Monitoring will consist of two main components: compliance monitoring and effects monitoring. BURNCO commits to providing the funding for these monitoring initiatives.</p>

1523	407 - 13	Robert Turner	Bowen Island, BC	<p>This project will expand industrial activity to a new greenfield site in Howe Sound. This project is not compatible with the ongoing recovery of Howe Sound from past industrial activity, nor its recreational use. Is this the highest and best use for Howe Sound?</p> <p>It is widely recognized that Howe Sound was extensively damaged by past industrial activity. Over the past 30 years, advances in environmental legislation and closure and remediation of past industrial sites has reduced pollution in Howe Sound. A recovery of marine life over the past 15 years, and particularly over the past 5 years, is indicated by the greatly increased presence of whales, dolphins, pink and Chinook salmon, and herring and anchovy. The Province has invested heavily in this enterprise, not the least of which are the ongoing costs of managing Britannia Mine effluent. As a consequence of all these changes, and the increasing demands of the growing population of metropolitan Vancouver, recreational use of Howe Sound has increased dramatically. A new industrial operation on a new greenfield site with significant ecological impacts is out of step with these trends.</p> <p>Currently, the footprint of industry (except for forestry) is absent from the entire 25 km long western shore of Howe Sound from Port Mellon to Woodfibre. Northern Thornborough Channel is a prime recreational area for boaters. The noise and visual impacts from the proposed project would be a significant intrusion on the recreational values of this area.</p>	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
1524	407 - 14	Robert Turner	Bowen Island, BC	<p>Currently, the footprint of industry (except for forestry) is absent from the entire 25 km long western shore of Howe Sound from Port Mellon to Woodfibre. 1525	407 - 15	Robert Turner	Bowen Island, BC	Question 9.1: What criteria suggest that this proposal is compatible with the "highest and best use" of the McNab Creek estuary and northern Thorborough Channel?	Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows: - Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2. - Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4. - Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4. - Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.  As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.
1526	407 - 16	Robert Turner	Bowen Island, BC	Question 9.2: What criteria suggest that the impacts of this proposal will not be detrimental to the ongoing recovery of marine ecosystems of Howe Sound?	It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).  Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.
1527	408 - 1	Personal Information Withheld	North Vancouver, BC	Hard for nature to continue to thrive when projects like this are approved. I am Not in favour of this project	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1528	409 - 1	Personal Information Withheld	Squamish, BC	I am opposed to this proposal due to the large impact on the watershed and limited economic impact.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1529	409 - 2	Personal Information Withheld	Squamish, BC	In particular impact on a salmon bearing stream.	A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.  The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.  The Proposed Project will not lead to a reduction in the quality of marine habitat. Any loss of marine habitat will be offset and potential effects on marine resources will mitigated through the planning and implementation of known and effective measures and practices. All potential residual effects were determined to be negligible or not significant.
1530	409 - 3	Personal Information Withheld	Squamish, BC	Existing brownfield sites in howesound are much more appropriate for economic development.	Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.
1531	410 - 1	Donna Lawrence	West Vancouver, BC	I am opposed to this project.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1532	411 - 1	Personal Information Withheld	Bowen Island, BC	This project is not compatible with the ongoing recovery of Howe Sound from past industrial activity, nor its recreational use. Is this the highest and best use for Howe Sound? This project will harm what is becoming a strong tourist attraction with the return of whales, dolphins, orcas, and fishing.	A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.  Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.
1533	411 - 2	Personal Information Withheld	Bowen Island, BC	It is widely recognized that Howe Sound was extensively damaged by past industrial activity. Over the past 30 years, advances in environmental legislation and closure and remediation of past industrial sites has reduced pollution in Howe Sound. A recovery of marine life over the past 15 years, and particularly over the past 5 years, is indicated by the greatly increased presence of whales, dolphins, pink and Chinook salmon, and herring and anchovy. The Province has invested heavily in this enterprise, not the least of which are the ongoing costs of managing Britannia Mine effluent. As a consequence of all these changes, and the increasing demands of the growing population of metropolitan Vancouver, recreational use of Howe Sound has increased dramatically. A new industrial operation on a new greenfield site with significant ecological impacts is out of step with these trends.	BURNCO understands this concern for Howe Sound and is a proud steward of the Proposed Project site and surrounding area.  BURNCO is committed to avoiding, reducing or otherwise mitigating potential effects of the Proposed Project through design features, best management practices and other measures described in Volume 3, Part G - Section 18. The EAC Application/EIS provides technically and economically feasible mitigation measures which first avoid and second reduce potential adverse effects for all VCs. VCs were assessed across all phases of the Proposed Project lifecycle (construction, operations, reclamation and closure), including Proposed Project activities, accidents and malfunctions and cumulative effects. The conclusion of the assessment is that, with the application of design considerations and identified mitigation, no significant adverse effects will result from the Proposed Project.
1534	411 - 3	Personal Information Withheld	Bowen Island, BC	Currently, the footprint of industry (except for forestry) is absent from the entire 25 km long western shore of Howe Sound from Port Mellon to Woodfibre. Northern Thornborough Channel is a prime recreational area for boaters. The noise and visual impacts from the proposed project would be a significant intrusion on the recreational values of this area.	A detailed assessment of potential noise effects of the Proposed Project is presented in Volume 2, Part B – Section 9.2 of the in the EAC Application/EIS.  Construction and operational noise levels were predicted using computer noise models for various construction phases and operational scenarios using the same type of equipment that will be used on site. Following the application of proposed mitigation (e.g., layout, schedule screening, equipment maintenance), potential residual noise effects of the Proposed Project were determined to be negligible. The SCRD noise bylaw was considered as part of the assessment.

1535	411 - 4	Personal Information Withheld	Bowen Island, BC	Currently, the footprint of industry (except for forestry) is absent from the entire 25 km long western shore of Howe Sound from Port Mellon to Woodfibre. Northern Thornborough Channel is a prime recreational area for boaters. The noise and visual impacts from the proposed project would be a significant intrusion on the recreational values of this area.	<p>A detailed assessment of potential visual effects of the Proposed Project is presented in Volume 2, Part B – Section 7.4 of the EAC Application/EIS. Potential visual effect of installed artificial lighting on sensitive night-time receptors have also been considered as part of the assessment.</p> <p>The Proposed Project is predicted to present a relatively small level of visual change to the landscape with effects diminishing with increasing viewing distance. Residents of McNab Creek Strata and recreational marine users in Thornbrough Channel are likely to be most affected. Following the application of proposed mitigation (e.g., layout, screening, revegetation, suitable lighting), potential effects are not predicted to demonstrate an evident contrast with the current landscape character or to produce a noticeable decline in the current level of visual quality. There is a potential to contribute to an increase in scenic character post closure. Potential residual effects were determined to be not significant.</p> <p>Volume 2, Part B, Section 7.4.5.3.2 of the EAC Application/EIS indicates adherence to design goals contained within the Sunshine Coast Regional District Outdoor Lighting Guidelines to maintain the quality of the night-time lighting environment and avoid lighting impacts as a proposed mitigation for potential lighting effects. Additional recommendations are identified from the Guide on the Limitation of the Effects of Obtrusive Light from Outdoor Lighting Installations (CIE) to avoid lighting impacts.</p>
1536	412 - 1	Personal Information Withheld	Bowen Island, BC	Who in government is assessing this project and what are the environmental criteria. It is astonishing this could even be eligible to be proposed. What about the economic assessment ? Surely Howe Sound is more valuable to British Columbia as a recreational/tourist asset than a gravel mine for an Alberta company.	<p>The proposed Project has undergone a rigorous assessment that has considered a broad range of potential environmental, socio-economic, heritage and health effects. A cooperative federal-provincial technical review of the Application is currently underway.</p> <p>Additional details regarding the BCEAO environmental assessment review process is provided in Volume 1, Part A –Section 3.1.2. of the EAC Application/EIS.</p>
1537	413 - 1	John Buchanan	Squamish, BC	1.) Throughout the downstream side of the project there are a multitude of ground water channels that are essential rearing areas for both Coho and Chinook. For the moment I am not taking about the big main spawning channel constructed, but the smaller ones along either side. Construction of this gravel mine would cut off all fresh water supplies to these naturally occurring channels. My field studies prove that these smaller channels are very productive streams.	<p>A detailed assessment of potential fisheries, freshwater habitat and marine resource effects of the Proposed Project is presented in Volume 2, Part B – Sections 5.1 (Fisheries and Freshwater Resources) and 5.2 (Marine Resources) of the EAC Application/EIS.</p> <p>The Proposed Project will not lead to a reduction in the quantity of quality of fish habitat. The loss of riparian and in-stream habitat will be offset by the construction of a new 790m groundwater-fed channel which will provide increased habitat for anadromous salmonids and resident Cutthroat Trout.</p> <p>The Proposed Project will not lead to a reduction in the quality of marine habitat. 1538	413 - 2	John Buchanan	Squamish, BC	<p>2) The big main Spawning channel that was constructed does work. The multiple times over the last three years that I have gone in to do field work have indicated to me that not only the constructed ground channel is very productive contrary to the proponents claims but there is an array of smaller natural ground water channels that come from the site that prove to be very good rearing areas for coho fry. Couldn't keep them out of my traps. In the very top end of the constructed ground channel I thought my trap was stuck on something then realized it was weighted down by cut throat. Also I hate seeing these dated photos of the ground water channel at all the presentations. Today the ground water channel is nicely vegetated in. There is quite a large Beaver dam at the lower end that prevents spawners from gaining access to the upper end but this could be notched every fall to rectify the situation, but of course if your trying to paint a picture of absence of fish and bleakness you wouldn't want to promote such a thing would you ? This of course is what this process for the proponent is all about. It's an old developers game. Down play the habitat and pay little to no compensation.</p>	<p>The proposed Project will lead to the loss of approximately 200 m2 of spawning habitat in the upper section of WC2 however, this loss is addressed by the Fish Habitat Offset Plan (Appendix 5.1-B). The offset plan proposes to extend the length of the existing lower section of WC2 by approximately 790 m. The proposed design for the channel extension uses the existing lower channel as a template and it will meet the factors and criteria that are generally accepted for the construction of a functional groundwater-fed spawning channel. It should provide conditions similar to the existing run habitat in the lower section of WC2 that was designed as chum spawning habitat by DFO and where spawning activity was observed during the November 2016 survey.</p> <p>The creation of the pit lake is predicted to cause a doubling of groundwater influx into the lower section of WC2. The increase in ground water influx will lead to additional groundwater upwelling and the increased upwelling is expected to provide increased levels of intergravel flow that will be suitable for eggs and alevins. The average depth in the proposed offset habitat extension and the remaining section of WC2 is predicted to be above 0.3 m making it suitable for salmon spawning. As described in the Aquatic Health assessment provided in Surface Water Resources (Section 5.5.7.2), the water quality and temperature of ground and surface water entering the offset habitat and existing lower section of WC2 will be suitable for salmonids to complete all stages of their life history including spawning.</p> <p>In response to comments from the Technical Working Group, the design of the habitat offset plan was revised to allow approximately 20 m of pool habitat upstream of the culvert and approximately 20 m of gravel bed run habitat downstream of the culvert to be retained which will avoid approximately 232 m2 of habitat loss. The design of the channel extension incorporates run and pool habitat in approximately a 1 : 1 ratio, based on this design and the use of run habitat for spawning in the existing lower channel it is expected that more than 2, 000 m2 of the offset channel habitat will provide conditions suitable for salmonid spawning.</p>
1539	413 - 3	John Buchanan	Squamish, BC	<p>3) The main creek McNab, would be threaten, in what can only be described as a planned catastrophic drying up of a well know spawning area for Pink, Chinook, coho, and yes even Sockeye Salmon have been documented in the creek. You don't have to be an expert in hydrology to see what will happen. The creek already experiences a drying up of the creek at the top end of the planned mining area. This drying up usually in August, start of Sept. prevents any Salmon from entering the creek system. The mines activities would create this massive crater causing the bottom of McNab creeks water to basicly drain out and dry over a much longer period completely wiping out all runs of spawning salmon. Yes the proponent is planning to build berms to dam the waters but the elevations required to maintain the integrity of the water contained in McNab creek would have to be huge in height, and be three sided, berm along the shore line and Berm to the right and to the left of the property.</p>	<p>A detailed assessment of potential surface water and groundwater effects of the Proposed Project are presented in Volume 2, Part B – Sections 5.5 Surface Water Resources) and 5.6 (Groundwater Resources) of the EAC Application/EIS.</p> <p>Positive effects on the flows in McNab Creek are predicted to result from reducing the rate of flow loss to the groundwater system. Increased baseflows are also predicted in the foreshore minor streams. Water quality predictions are below applicable Water Quality Guidelines.</p> <p>Groundwater flow is predicted to be less than the baseline during the first 15 years of operation. This loss represents a gain in flow in McNab Creek. Groundwater flow at closure will be controlled through adaptive management of the overflow structure. No water quality parameters are predicted to exceed BCWQG or CCME Guidelines.</p>

1540	413 - 4	John Buchanan	Squamish, BC	In conclusion I would ask that this project be turned down. I have included one of my many field reports from the last 3 years that clearly shows the productivity of the area for Salmon.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1541	414 - 1	Lea Bradford	Bowen Island, BC	I can not believe this is even under consideration....what are you thinking?  No. No. No. Please. No.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1542	415 - 1	George C. Hamilton	Brackendale, BC	I do not believe that the proposed gravel mine in the McNab Creek area should be approved.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1543	415 - 2	George C. Hamilton	Brackendale, BC	Any "economic benefits" which might derive from the project for various parties would be far outweighed by the massive environmental degradation which would result from the project.	Potential effects of the Proposed Project have been assessed for selected valued environmental components to address key issues related to fish and fish habitat, marine resources, terrestrial wildlife and vegetation, geotechnical and natural hazards, water resources, air quality and climate change.  The assessment concludes that, with the application of design considerations and identified mitigation, no significant adverse environmental effects will result from the Proposed Project.  A detailed assessment of potential environmental effects of the Proposed Project is presented in Volume 2, Part B of the EAC Application/EIS.
1544	415 - 3	George C. Hamilton	Brackendale, BC	There are many potential gravel sources -- there is only one Howe Sound, a priceless jewel particularly in view of its close proximity to Metro Vancouver.	Alternatives to the Proposed Project and the rationale for selecting the preferred alternative are provided in Volume 1, Part A – Section 2.8 of the EAC Application/EIS. Also included are alternative means of carrying out the Proposed Project (e.g., alternative locations, transportation, mine layout, processing, loading and barging layouts, and mining methods). Criteria considered in the alternative assessment are environmental effects, social effects, cost effectiveness, and technical applicability.
1545	416 - 1	Personal Information Withheld	Bowen Island, BC	Don't do it. It is such a wonderful beautiful place, how many of these natural beauties do we have to give up for the profit of a company.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1546	417 - 1	Personal Information Withheld	Bowen Island, BC	Clearly, there is no conscience when it comes to monetary greed which is what this proposal appears to be. Please, in the name of present generations and of those to come, do not be remembered for permitting the destruction of this pristine estuary.  DO NOT ALLOW the Burnco Aggregate Project to proceed. Thank you.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1547	418 - 1	Anne Miles	Gibsons, BC	Please do not re-industrialize Howe Sound. It is more valuable, in so many ways, in its natural state.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1548	419 - 1	Jan de Beer	Langdale, BC	I am opposed to the Burnco Aggregate Project and all industrial activity in the Howe Sound.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.

1549	419 - 2	Jan de Beer	Langdale, BC	We have finally seen whales returning to this area during the last 3 years.	<p>It is acknowledged that historical industrial activities have impacted Howe Sound and that the ecological health of the area has been improving. The current state of Howe Sound is reflected in the baseline conditions against which potential effects were assessed. Baseline/existing conditions environment are summarized within each technical section of the EAC Application/EIS (5.1 through 9.2).</p> <p>Baseline reports are provided in Volume 4, Part G – Section 22.0 of the EAC Application/EIS.</p>
1550	419 - 3	Jan de Beer	Langdale, BC	Howe Sound should be designated as a World Heritage Site (UNESCO) instead of ripping it apart for a few measly jobs. Few major Cities have access to unspoiled nature as Vancouver do with Howe Sound at its doorstep. What a shame if this project should go through!	<p>Existing Land and Resource Management Plans and protection or conservation area designations were considered in assessing potential effects on land and resource uses. These are summarized in the following technical sections as follows:</p> <ul style="list-style-type: none"> <li>- Land and Resource Management Plans: Volume 2, Part B – Section 7.3.4.2.</li> <li>- Protection and conservation designations for Terrestrial Wildlife: Volume 2, Part B – Section 5.3.1.4.</li> <li>- Protection and conservation designations for Terrestrial Vegetation: Volume 2, Part B – Section 5.3.2.4.</li> <li>- Protection and conservation designations for Marine Resources: Volume 2, Part B – Section 5.2.4.</li> </ul> <p>As a property owner and stakeholder in the area, BURNCO would be pleased to participate in a broader planning exercise for Howe Sound. EA is not typically a forum for developing new land and resource use planning areas, designations, or objectives.</p>
1551	420 - 1	Susan Alexander	Bowen Island, BC	I am writing to you in opposition to the wet gravel mine proposed for McNab Creek by Burnco.	Your position is understood and will be documented in the Application Review Public Issues Tracking and included in the documentation of public consultation activities.
1552	420 - 2	Susan Alexander	Bowen Island, BC	First, why would anyone mine an estuary in an area (Howe Sound) that is still recovering from earlier industrialization.	<p>A detailed assessment of potential effects on marine resources is presented in Volume 2, Part B – Section 5.2 of the EAC Application/EIS.</p> <p>An estuary is a semi-enclosed body of sea water where salinity is measurably diluted by freshwater from a stream or river. It is where the fresh water meets the salt water. They are often characterized as having low salinities, shallow depths, high turbidity, high levels of nutrients, and high productivity.</p> <p>The McNab Creek estuary overlaps with the proposed marine infrastructure (ie. the electric conveyor) and a portion of the proposed shipping routes, but the Project will have no effect on the estuary. We will not be mining within the estuary.</p> <p>The other considerations assessed in regards to the estuary are changes to the amount of freshwater dilution from watercourses in the proposed Project area. Based on surface water models, the water courses at the proposed Project site will contribute similar combined freshwater flow outputs as currently exist. This will result in no change in the amount of freshwater output into the estuary and no predicted change to the extent of the McNab Creek estuary. The estuary will be unchanged by the Project.</p>
1553	420 - 3	Susan Alexander	Bowen Island, BC	The whole area, which is the recreational area for Vancouver and the Lower Mainland, has a high tourism and ecological value.	<p>A detailed assessment of potential recreation and tourism effects of the Proposed Project is presented in Volume 2, Part B – Section 7.3 of the EAC Application/EIS.</p> <p>Measures proposed to address key nuisance concerns (noise, air quality, visual quality) also mitigate potential effects on the quality of the environmental setting. Recreation and tourism activities are not expected to be displaced and potential residual effects will be limited to the life of the Proposed Project and were determined to be negligible or not significant.</p>
